## 1. Re: HQ-200

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-01-01 00:00:00 UTC
From: Bis_Wichy@webtv.net
Message-ID: <68gfh5$7cg$1@newsd-161.iap.bryant.webtv.net>
Source record: 112368

Dave's correct,

1N34A for Detector - 1N541A for the noise limiter. Hammarlund tried several new styles without much luck. The 200 production run was from 1968 to 1972.

Their market was SWL's who wanted something small and cheap. Jap imports came in and that was that...

The early 70's were tough times for many American radio companies. Management failed to convert to solid state and semi-automated production techniques. A number of them were bought out or just closed up.

They failed to recognize the public, having bought small cheap Jap transistor radios during the 60's, were now open to buying imported high end electronic equipment.

Expensive full page QST ad's during the 1980's and 90's were all Jap. Yeasu - Kenwood - Icom where everywhere.

While hams sold or gave away all their BA's for the new Jap rigs. Many great working BA's ended in landfills because no one wanted them.

However, last year (97) has brought a number of American companies back into the radio business. New names with new ideas. Even Drake which gave up on ham radio is back.

Collecting American tube radios has also become very fashionable... and not just ham equipment, but AM radios, juke boxes and even tube audio amps.

So yes, your HQ-200 is a collectors item.

It heralds back to the 60's when management's answer to falling sales was to put the same XXXX (insert product here) into a new fancy box.

Probably more than you cared to know... but there is a story behind every BA.

Source record: 112369
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.amateur.equipment,rec.radio.amateur.swap

I'm considering Heathkit SB1000 for my first HF Amp. I've been looking and still not sure what to purchase. I'm looking for an AMP that will do 10-160 / WARC / MARS / SHARES frequencies. Don't have a lot of $$$.

What is your recommendation on the Heathkit SB1000 HF Amp. Other Amps I should consider? Price around $550 since this is the cost of the Heathkit SB1000.

Thank you for your help and assistance.

Happy New Year.

## 5. Re: WHAT DOES "INTERESTED" MEAN

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-01-01 00:00:00 UTC
From: Bis_Wichy@webtv.net
Message-ID: <68ghre$4u9$1@newsd-164.iap.bryant.webtv.net>
Source record: 112372

In-ter-est-ed adj. 1. Having or showing curiosity, fascination, or concern. 2. Possessing a right, claim, or share. 3. Desirous of personal gain; self seeking.

hmmm... I agree with you.

Often, I say I am "interested" so I can learn more about the item posted such as general condition, what else comes with it and sellers location. Details that are always seem to be left out on FS posts.

Even if I say "I want it"...

I always assume, from the sellers viewpoint, the first $$ that arrives at sellers location should get it.

If you really wanted it, you can wire the $$ via Western Union.. or do a wire transfer directly into their bank account... or send a check via snail mail... but don't cry if someone beats you to it... jeese!

Also if you ask someone to send it UPS COD to you - then you are obligated to buy it. If you don't accept it, then you deserve the FLAME posts. It costed someone money and time to ship it to your door.

I think part of the problem is that a small number of post'ers are trying to run a small business. Others expect to get full service just like a walk-in store front.

Possibly the real problem is that the rest of us only think it's a hobby...

>graph that.

The following comments are not directed specifically at this
poster, but to the whole newsgroup:

Speculators, or anyone else, do not operate out of the "system."

A speculator, by definition, is making a gamble on the future of
the market he/she is speculating in. Sometimes the speculator
wins, but most of the time the effort is fruitless.

I have no problem with speculators, or any other part of the free
market system. Every transaction has a buyer and a seller, and
presumably each one is reasonably happy about the transaction.
Speculators alone do not cause prices to rise, it also takes a
buyer who is willing to pay the higher price and who considers
that "higher" price to be satisfactory.

If you consider some price to be too high, then negotiate or do
not purchase the item. If someone else wants the item more and/or
is more able to afford it, then they will get it and you will not. This
happens all the time and is efficient if the market clears (all items
are negotiated to sale).

If you feel nostalgic about something, then by all means donate it
or sell it at a discount to the market. It is unfair to demand that
everyone do this on every transaction, as this serves your interests
and not the sellers. Most of us have given away tons of stuff
(for me, literally tons recently) but that is a personal choice and
if we do it, it is if and when we choose. I, for one, have gotten
quite tired of all the whining I hear about prices being too high
(as if that will reduce prices).

itself.....Ed Legenza N6XA 73 (the memory IS the first thing to go).

## 15. FS: Johnson KW Matchbox Mint

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-01-01 00:00:00 UTC
From: k1dpm@aol.com
Message-ID: <19980101200001.PAA11309@ladder01.news.aol.com>
Source record: 112382

Hi gang:

I have a collector quality E.F. Johnson KW Matchbox with meter and Directional Coupler. With the exception of several very small hairline scratches on the top of the cabinet, the unit looks new. You must put your face on top of the unit to see the the scratches. They are invisable otherwise. The only other flaw is that the former owner scratched his callsign on the back panel. (about 2" long). This matchbox has seen little use and may be the best example of a KW Matchbox available (other than new in the box of course). I have original manual preserved in plastic with includes the original E.F. Johnson inspection tag. Matchbox works as new. $400 FIRM plus shipping.

I have for sale the Drake 2 meter and 6 meter convertor in the CC-1 console with the CP-1 Power Supply. These are hard to find Drake pieces and are in Very Good Condition. I will include a photocopy of the manuals for the 2 and 6 convertors. I am taking offers and will let it go to the highest reasonable bidder. I can find no history of what these are going for being they are so rare that is why I am doing it this way. I will not give them away though so make your bid count.

Thank you,

WA0KDS/7 Ron

Tom,

The HQ-200 was one of the last genl. coverage receivers H-lund made before going out of business in the early 70s. It is considered a collectible because of that, but its design and performance was not up to that of the earlier H-lund receivers, like the 100/145/180 genl coverage models that preceded it.

As was true with most of the now defunct US manufacturers, the radios they made near the time they went out of biz, were not up to the quality and standards of the older equipment. One reason was they were trying to compete with the Japanese and to do so they had to cut costs wherever possible, which included skimping on the receiver design and quality of construction. If you ever have a chance to put your 200 next to a 145, 160 or 180, you'll see what I mean. I've had a chance to own and operate all of them and the 200 was by far the poorest performer of the bunch. -
73, Bob, K3AC

Source record: 112394

This one might be a collector's item. It carried a chapter on Narrow Band Voice Modulation (NBVM), which was a technique to compress the audio both by level and frequency before being fed into the SSB transmitter. It got a lot of fanfare in QST, and then this chapter in the handbook, and then disappeared. I don't know whether the chapter was in the following year's handbook.

Hi Mates:
A few of the folks did not come through on their requests for the 11 pin Plugs and Sockets as used on S line and a lot of Heath stuff. I still have a small quantity of these left. They are Male 11 pin amphenol nos brown micalex with cord cap and snap ring and female amphenol black bakelite with cord cap and snap ring.
$10 post paid first class for a mating pair, or a pair of males, or a pair of females all with cord caps and snap rings.

Tom,

If my memory serves me correct, the HQ-200 was basically an updated version of the HQ-100 series. They added a few diodes in the place of a tube or two, and attempted to update the styling. Hammarlund was on the way out at the time, and I doubt it sold very well. For that reason, it probably is considered by some to be more collectable than the HQ-100.

## 46. WHAT DOES "INTERESTED" MEAN

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-01-01 00:00:00 UTC
From: radiomatt@aol.com
Message-ID: <19980101151901.KAA06893@ladder02.news.aol.com>
Source record: 112457

As a frequent buyer on the Internet, I frequently respond to a posting with the word "interested".

Apparently some people take this to mean a commitment to buy, whereas it means to me that I'm prepared to start negotiating over price, terms, etc. Since I've sinned it this regard (am I the only one?), I thought I'd post this to prevent hard feelings in the future.

Most of the time I get an E-mail back saying something like "two other interested, first $XXX takes it", or providing more details.

If I say "interested at $35" then it's a firm offer. Or "where do I send my $$".

But just to say "interested" shouldn't mean a firm offer. Or am I wrong?

Matt

## 47. FS: Dentron LA 1000 \ GLA 1000B $295 shipped

Newsgroup: rec.radio.amateur.boatanchors

If you treat the 8874's carefully and run them with minimal grid current,
and avoid overdriving, they will last you indefinitely. I had an Alpha 78 that I purchased from the original owner that was about 20 years old and was running the original set of tubes, with full power out.

Although you can get over legal limit p.o.with the 76PA, it was not designed for running this type of power. Keeping it to 1200-1300 W out, or less, with <50-75 ma total grid current should keep those tubes going for many, many years. One tip - go inside about once every 6 months (sooner if you operate it heavily) and blow out the dust that accumulates in the plate fins. They're very close spaced and tend to get blocked up with dust, and lead to overheating. The thing that kills these tubes are excessive grid current and overheating. And yes, they've gotten expensive since I think Eimac is not producing large quantities anymore due to the popularity of the 3CX800A7. I suspect eventually that the whole 8873/74/75 line will be discontinued since they are not used much commercially anymore, if at all. As stated, Svetlana is making the 8874, but they've priced it about the same as the Eimac. - Bob, K3AC

Interesting question. (Pardon the pun!)

Generally, if I am going to haggle over price, I would also mention that fact in my FIRST message to the seller. He may not be interested in haggling and also have folks willing to pay the price who also answered after you.

After being burned enough times on internet deals, I use the word "interested" to indicate that I want the radio, but after some discussion. I have a check list of questions for boat anchors: whats missing?, whats modified?, condition?, knobs?, rust?, dents/dings?, paint? ,working?,dials, etc. etc..

I would imagine most others would do the same -- It's to the seller's advantage to also give as much information regarding condition, and price (FIRM, $xxx or B.O.) in his ad just to save his own time in handling responses....

So my responses would be something like this:

"I am interested in talking to you about your radio and wish to make an offer..." or.........

"I am interested in your set at the advertised price but have a few questions about the radio...."

Both replies give the seller an indication where you're coming from, and both give you an out if the set's condition doesn't meet your expectations.

A hint for everyone: Tempo 1-s usually go for about $100-150.
I have seen mint ones get $175.00 but that is about it.

They are a nice old rig, but nothing special.

For $250 you can get a (better) TS520 or FT-101 series rig with more
power and features.

Just a few thoughts. Sell on!

Hello Trev!

Good to see you on here!
At least someone responded, eh?

Well, the lads doing the Trans-Atlantic tests with 19 sets don't
claim to be doing anything new or unique... I think they just want to
have a bit of fun with the old beasts!!

Maybe you can e-mail to them, and tell them about your similar
experiences back then.

Perhaps it's possible thoughth, that you didn't work, "19 set to 19
set" across the Atlantic back then, so this still MIGHT be a first!

Grin!

T'rah - Bry, G3XLQ / AF4K

( A Transatlantic type myself!)

## 56. FS Gonset HF AMP GSB 101

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-01-01 00:00:00 UTC
From: Chris <ck5@ix.netcom.com>
Message-ID: <34AB4D85.6119@ix.netcom.com>
Source record: 112467

I have a really nice shape GSB 101 hf linear. Uses four inexpensive 811s
The rectifier mod has been made. Front panel is 9.5-10 shiny and all lettering in fine shape, no scratches. Cabinet is fine but could use a painting to be perfect. It needs one 811 tube which broke while I was cleaning it. The meter is very clean and all knobs are original and in fine shape. I want $350 + shipping about $50. 73 Chris VE3NGW/W4 Florida

## 57. fs-Parts for ROLLER TUNER!

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-01-02 00:00:00 UTC
From: rlucch2098@aol.com
Message-ID: <19980102145801.JAA00250@ladder01.news.aol.com>
Source record: 112318

Hi Guys;
I have for SALE:
Homebrew Roller tuner will handle 2kw pep,
uses two large caps and one large roller, plus a balun.
Its already mounted in a rack panel and finished but I advertised PARTS because everyone wants to make thier own.
Anyway there are over $300 worth of parts, waht with the turns counter, vernier drives(2), 2 CAPS, roller, balun, etc.
There are no used old Mil surplus parts in here, all newer stuff.
I can supply a JPG picture of it!
Price is $150 shipped.
Thanks es 73.....RICH RLUCCH2098@aol.com

## 58. WINRADIO for trade

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-01-02 00:00:00 UTC
From: bigjim@voicenet.com
Message-ID: <w08r.3$xM2.134142@news2.voicenet.com>
Source record: 112319
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.shortwave,rec.radio.swap

I am looking to trade my Rosetta Labs Winradio Reciever.
This is a PC Reciever that plugs into a PC slot, runs under windows,
has very nice software that looks just like a shortwave reciever on
your PC screen, and tunes from 500KC to 1.3GHZ, AM, FM-W, FM-N, SSB.
It is 6 months old and comes with software and manual. They cost
about $550 bucks new and I am looking to trade for?????
I am prepared to trade it towards equipment with cash or take partial
trades with cash after we come up with a mutual value on both of our
equipment.

Looking for;
Boatanchor transmitters-Collins, Johnson, GlobeKing, etc
Collins recievers or Hallicrafters SX-115
ICOM IC-761 or 765
ICOM PC-R1000? (I think thats their PC reciever #)
BIG Amp parts, stuff for 2000watt plus amps
or possibly anything that seems really interesting.

Thanks alot and have a Great 1998!
Jim
bigjim@voicenet.com

From: craig <ip500@roanoke.infi.net>
Message-ID: <34AD1CC6.2794@roanoke.infi.net>
Source record: 112322

OLD time B/A receiver. Breting 14, pictured on page in "Flick
of the Switch" 1937 production. Unfortunatly this was mounted in a
console so there is no exterior case, but I do have the faceplate.
Dial glass is missing,brass eschutchian is there, all knobs present.
Guaranteed not to work?? at least I'm not going to plug it in.
Overall good cond./ chrome is pitted on chassis.
Don't have a clue what it's worth, so any offers?
Thanks, Craig Smith---Roanoke,VA 24012

## 65. Re: WTB: Heath Sixer / Parts

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-01-02 00:00:00 UTC
From: Michael Black <blackm00@CAM.ORG>
Message-ID: <Pine.GSO.3.94.980102144322.10787C-100000@Stratus.CAM.ORG>
Source record: 112326

Weren't there two versions of the Sixer? Now that the question has
been brought up, I recall something about them using a crystal (obviously
an overtone) right at 50MHz. But the use of 8MHz crystals for the Sixer
also seems familiar. Something (which I can't remember) leads me to
believe that there was an A model that went from overtone to fundamental
crystals.

Someone else might be able to come up with an answer. I guess I am not
sufficiently interested in this question to dig through old magazines
to find an answer.

I have a Pierson KE-93 mobile receiver circa 1955. This unit is quite a nice little radio 7"X6"X10" and covers BC,160,80,40,20 and 10 meters. Does anyone have any information about this unit, a schematic or any information about the power requirements via the 8 prong plug (only 5 wires). It was suggested that this unit might be a collectors item. Could anyone shed any light on the radio and what it might be worth today (always a very subjective question).

Cheers

Chris Anton

Hello, I have the following for sale.

Eico Model 720 Transmitter. good condition cabinet could use repainting, complete and everything lights thats supposed to but I never put it to an antenna.
$50.00 plus shipping.

Modulator, push pull 6L6 output. Collins modulation transformer. I don't know if this was home built but is complete. Components mounted on a U shaped chassis 13"X6" . $40.00 plus shipping ( has power supply built on board so its heavy for the size, 20lb).

Home built 80 meter VFO. whoever built this new what they were doing. Looks good, works great. Very stable. Tunes across most of the 80 meter band. Has pl259 connector as RF output with coax terminated with gutted FT243 crystal case. Just plug into your crystal connector and tune.
$25.00 plus shipping

Galaxy III Transeiver. Good condition, ( I have a photo of this radio on my web page) cabinet has been repainted. About 180watts PEP output. S meter deflects on only strong signals but receiver works fine.
This is a 80,40, 20 meter SSB transeiver.
$50.00 plus shipping.

Lafayette HE35 6 meter transeiver. This little radio has been modified with extra switches and meter installed in the front panel. does work though. With microphone.
Needs crystal for transmit ( 8mhz) but receiver has built in VFO.
$15.00 plus shipping

Palomar mobile HFamplifier. about 300 watts PEP, Solid state. Front panel has selector knob for 80-10 meters. This amp had a receiver preamp but previous owner had removed it.
$50.00 plus shipping

Henry Electronics 2 meter amp
12 volt mobile
5 to 20 watts in has 80 watts out.
Does not have correct power cord.
$45.00 plus shipping

Mikes:
ElectroVoice 630 microphone, I don't think this mike was ever used. With new amphenol connector.

Shure model 55S microphone with connector, in Shure Microphone
drawstring bag.

ElectroVoice 719 good condition.
I honestly don't know what these are worth so make (fair) offer.

Bud Codemaster oscillator .
good condition and works. Front panel has Pitch and Volume knobs.
2 tube oscillator in metal case.
$15.00 plus shipping

TUBES:
2 ea. 235 globe 4.00 ea.
4 ea. 24A ST 4.50 ea
5 ea. 27 ST 2.00 ea.
1 ea. 280 ST 10.00
2 ea. 35 ST 2.00 ea.
These are used and test good.

If you need any info on these items please email me. My zip is 70058
Thanks, Jake KK5HY

> Matt

Matt
From my study of contract law there has to be three events to constitute
an agreement.
1. An offer -ie posting on the net
2. An acceptance -of the offer exactly as presented
3. Consideration by both parties to the deal.

The word "interested" is none of the above except an indication of
potential
purchase. Often the details posted on UG's is insufficient to make an
evaluation
of the goods being offered. So "interested" is an invitation by the
potential buyer
to further negotiations as you mention.

If you say $35 for example ; that's a new offer , subject to the
acceptance of the buyer
and it does not commit him to accept.

I buy and sell stuff too and enjoy that part of the hobby. I also find
it quite
offensive to hear no response from an inquiry. That's happened very
often to me.
I guess there are many hams out there just looking for a buck and never
had developed
a sense of common courtesy on the internet.

## 85. FS: SBE SB-34 ssb transceiver

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-01-02 00:00:00 UTC
From: wetartie@ix.netcom.com
Message-ID: <N.010198.194720.12@vna-va13-01.ix.netcom.com>
Source record: 112404

For Sale:

Sideband Engineers (SBE) model SB-34 ssb transceiver.
A great little rig, very advanced for it's time (1960's).
Covers 80, 40, 20, 15 meters, selectable sideband,with
at least 60 watts (PEP) output. In fabulous condition,
throughout; performance is excellent, as is the physical
condition. Makes a great rig for mobile operation, or
as a second rig in the shack; has built-in 12 volt DC
power supply, and 110 volt AC power supply. The SB-34
is transistorized, with one tube in the RF driver stage,
and 2 final amp tubes. Complete with original manual
and even the original box, Shure mike, AC and DC power
cords,and I'll even throw in a spare (new, NOS) driver
tube, along with a new (NOS) pair of final amp tubes.

Price is $175 plus UPS shipping.

## 99. HELP: DX-100 modulation problem.

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-01-03 00:00:00 UTC
From: vfo@worldnet.att.net
Message-ID: <68m3at$t1m@bgtnsc02.worldnet.att.net>
Source record: 112271

Hello,

I have a Heathkit DX-100 transmitter. When I key it up on AM, the audio has a light crackling sound at times. When I turn the audio gain control clockwise to about 7, a squeal will start. It will stop once I turn the gain back down. I was testing a unamplified D104 desk mike, and it worked for awhile, then this problem started. I have changed both the 12AX7, 12BY7, and 1625 tubes to eliminate the possibility of bad tubes. Also changed were the .1 mf bypass capacitors that go to the 12AX7. Nothing has changed. I also disconnected the small interstage transformer to see if there were any shorts between the two sides. All resistance readings are correct, and no shorts. Does this mean that the modulation transformer is bad? Has anybody seen this problem before.

Oh, I alsmost forgot to mention that there was audio in the beginning, but now barely a trace of audio from any microphone tried.

Thanks in advance for any suggestions.

Bill

## 100. ***HAM RADIO EQUIPMENT FOR SALE***

Newsgroup: rec.radio.amateur.boatanchors

Ham Radios For Sale!
HF Equipment
I have a Kenwood TS-430S in like new condition. With mic and
internal filters! This rig also has the FM board in it for working
those great 10 Meter repeaters! It has a general coverage
receiver for listening to Military and Maritime traffic. It has been
professionally modified for MARS/CAP and WARC bands.

HF Equipment
I also have an automatic antenna tuner. It is a Kenwood AT-250
and is a matching set for the TS-430 listed above. This will tune
almost any antenna to work where ever you want it to. Also in
like new condition!

VHF All Mode!
I have an Icom IC-290H 25watt all-mode 2 meter rig. This is an
older rig but works great! This is one of the radios that was built
to last. It has FM, USB, LSB, and CW.

If you are interested please send me some E-Mail at the address below
and we can discuss pricing. Or check out my web site ad - the URL is
also listed below!

Nice transmitter. You might call Fair Radio in Lima, Ohio for leads -
while you're at it, ask about the TN-339 antenna tuning unit. The T-368
should be available surplus as these rigs (part of the AN/GRC-26D) are
quite dated.

Vibroplex bugs are neither collectible nor valuable.
I'll give you $10.00 for each one you send me! ;^}

Now that I got that out of my system....

Generally speaking the primary factor is age. Models
back to the 60's are still around and reasonable (?),
before that, the prices really start to climb.

Condition is another factor. Excellent condition bugs
with original case and wedges are fewer and fewer.

Of course, uniqueness adds value. Some models had
very limited runs and are more valuable.

By the way, McElroy automatic keys are totally
worthless, but being a nice guy, I'll give you
a few bucks for those also. ;^}

There are some excellent WWW sites run by folks
who have considerable more knowledge than I.
I'll try to dig up some URLs for you, or search
on ""telegraph key" or "vibroplex"...

I expect by now your garage is full of bugs and are starting to get into
the house. You will just have to tell the mailperson to stop delivering
them. Have a good day.

WA0KDS/7 Ron If you have some left over send them my way.

Jeff the only difference that I know of is the 170 has a B+ supply from
a 5U4G
tube.
The "A" version is solid state P/S
The "A" version also has a hinged lid for convenience of tube changing.
I believe everything else is the same. You can get a manual at w7fg.com
if needed.
Mike

Saturday 01-03-98
Rocklin, CA 95677

Hello:

Want two telephone operator-type headsets (NOT
*handsets*) that are equivalent *electrically* to the
venerable W.E.Co. (former AT&T) model 52A
Operator's Headset.

The headsets have an over-the-head band to
clamp the assembly to the operator's noggin, one
receiver/earphone/earpiece, usually worn on the
left side, and the transmitter or mike at the end of
a boom, near the operator's mouth organ.

Must have the dual tip-sleeve switchboard-type plug
at the end of the long coiled cord, or modular phone
connector on the end of the cord WITH the adapter
from modular-to-241 style dual 1/4 inch tip-sleeve
plug. My application requires the dual plug.

Modular or 1/4 inch single tip-ring-sleeve plugs at
the end of the cord WILL NOT WORK.

These headsets were and are being made by
such outfits as Plantronics and many others.

These operator's headsets are NOT electrically
equivalent to many headsets used in the amateur
(ham) community, although they may be somewhat
similar in appearance

Must be in good mechanical and electrical shape.

Must speak English.

What do you have? What do you want for them?
(Remember that I need two sets.)

Thanks for reading de John WB6GHA (formerly WN6GHA)
occupant@ns.net

Peter Sez:

>After being burned enough times on internet deals,
>I use the word "interested" to indicate that I want the radio, but
>after some discussion. I have a check list of questions for
>boat anchors: whats missing?, whats modified?, condition?,
>knobs?, rust?, dents/dings?, paint? ,working?,dials, etc. etc..

Absolutely!

Apparently there is one "gentleman" that frequents the swap groups and e-mail lists to whom the term "interested" is a disgusting misuse of the English language. But! I'm with you,Peter....if I say "interested" it means just that...I am ready,willing and able to buy the piece,WITH ADDITIONAL INFORMATION!! I need this additional information to make an INFORMED final decision. I have gone whole-hog into deals before without asking questions and been burned badly.

There are always people who try to find hidden meaning in what people say or do. These people can keep their stuff as far as I'm concerned. I am not going to live or die by what someone decides I'm qualified to buy from them (more often than not,a little too expensive and somewhat mis-represented)....

Oh yeah, I'm really not trying to start a pissin' contest.....just my 2 centavos and worth exactly that!!! (;->...

Happy New Year to all.

I have for sale a very nice Hallicrafters SX-101A receiver. It can be seen at the web page listed below. This unit is pick-up only or I'll meet you half way if within 50 miles. Price is $200. Again, sorry but no shipping for this one.

Rick

## 157. Re: Heath Monobander info:

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-01-04 00:00:00 UTC
From: n2ey@aol.com
Message-ID: <19980104152301.KAA18641@ladder02.news.aol.com>
Source record: 112222

The Heath monoband SSB transceivers were produced in the mid '60s in two distinct versions. The original series (HW-12, HW-22, HW-32) had the 8 pin power connector on the back, no sideband selection (lower on 75 and 40, upper on 20) and cost $120 in kit form. They were originally meant to work with the HP-10 and HP-20 power supplies. The later series (HW-12A, HW-22A, and HW-32A) had selectable sideband, and the price dropped to $100 for the HW-12A and $105 for the others. I believe the 11 pin power plug was standard on the A series, to match the SB series and the HP-13 amd HP-23 power supplies. All of the monobanders will work with either supply - if the supply is set up for +250 volts on the low voltage tap. The early model HP-13's had to be rewired to change from +300 to +250 low B+ (the SB series and the HW-100/101 use +300) while the later models have a switch. Sorry, don't have the 8 pin power wiring handy, but will keep looking.

73 de N2EY

There is a book on the market called "Power Up" which has in it instructions on a replacement battery for
the PRC-10, and other military surplus radios using 9 volt batteries and other common type batteries. I
believe Fair Radio or Grove Enterprises carry the book. I have a copy ot it. If you want further info email
me.

## 163. INFO: Braun receiver??

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-01-04 00:00:00 UTC
From: Ian Webb <ian_webbXXX@pacbell.net>
Message-ID: <34AFC373.D8004142@pacbell.net>
Source record: 112228

I have the following receiver which I acquired years ago. I've only turned it on once-in-a-while during the past several years but it does work.

I'd be interested in info on age, whether or not it's something that somebody might collect and if so, an idea of rarity and possible value...???
---

BRAUN TS-2 (West Germany)

Light wood cabinet in pretty fair shape. A couple of dings but could probably be made to look pretty decent. Speakers on the sides. Has an interesting rotatable antenna inside which rotates from a front control panel knob. Nice for nulling out interference on the BC bands. 6 ELxx tubes from layout info on back cardboard panel. I did have the back off years ago and as I recall there's a schematic inside.

approx size: 14" hi, 21-1/2" wide, 10-1/2" deep

frequency coverage:
BC approx 540 -1700 kHz
SWII approx 5 - 12.5 MHz
SWI approx 12.5 - 24 MHz
FM approx 88 - 108 MHz

The control panel is across the lower part of the cabinet in front and is light grey colored. Has bass and treble as well as the control to rotate the internal loopstick antenna mentioned above. Large slide rule

dial across front of receiver. It has a tuning eye which is weak but can be seen.

Push button panel at extreme bottom of control panel:
OFF - PH - BC - FA-NS - NS - SWII - SWI - FM
(The NS seems to be some attempt at noise supression.)

I'd be interested in anything anybody knows about these. Solid in the US or brought in by somebody in the military perhaps? It does have ENGLISH on the back.

Sorry for the SPAM preventive, but please remove the XXX in my address if you reply via e-mail. I know some people hate this but I chose to practice a bit of self-defense!

Ian

Source record: 112244

Hello Everyone,

I have a Drake C-Line (R-4C, T-4XC, AC-4, and MS-4) for sale. The R-4C has the 1.5 kHz CW Filter installed. The T-4XC has very good output, running about 175 Watts out on 80M. Serial numbers are as follows:

R-4C - 25908
T-4XC - 29807
AC-4 - 61315

These radios are very nice looking with no scratches on the front panels at all. The chassis are perfect and shiney. Asking $500.00 plus shipping.

I've got one of those silly contraptions, too. Maybe we can saw them in two and at least salvage the key.

> me.

Well, lets see here... the TM says it uses a BA-279/U. Further, it looks like the battery supplies 1.5v (filaments, obviously) and 67.5v for B+. Lets see if there's anything more here.....yeah, there's more! The battery is a composite unit. It supplies A+ of 1.5 volts, dual B+ of 67.5 volts and 135 volts (2 67.5 volts in series) and C- of 6 volts. All these voltage are derived from the BA-279. The pinouts are as follows:

Pin A +1.5v
B +1.5v
D +135v
E +67.5v
F B- (return for 67.5 and 135)
H -6v (return)
J -1.5v (return) and +6v

Hope this helps. de Jeep K3HVG

> Harness, control head, Mic and speaker.

Good luck on the amount of time needed to move it to 6...
a 23 series is good for 36-42 MHz....moving it up to 6 IS
possible but not easy....a 33 series is merely plug in xtals
and tune....the 23 requires parts changes and modification to the
front end to tune.....(the 13 is best for 10mtrs...the 23s really
arent good for much except spare parts)

Hi All,

I have for sale the Drake 2 meter and 6 meter convertor in the CC-1 console with the CPS-1 Power Supply. These are hard to find Drake pieces and are in Very Good Condition. I will include a photocopy of the manuals for the 2 and 6 convertors. I am taking offers and will let it go to the highest reasonable bidder. I can find no history of what these are going for being they are so rare that is why I am doing it this way. I will not give them away though so make your bid count. I will run this add until Jan 8, 1998.

Thank you,

WA0KDS/7 Ron

## 207. FS: Johnson KW Matchbox Mint

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-01-04 00:00:00 UTC
From: k1dpm@aol.com
Message-ID: <19980104051600.AAA08133@ladder02.news.aol.com>
Source record: 112309

I have a collector quality E.F. Johnson KW Matchbox with meter
AND Directional Coupler. The tuner and coupler look new. This matchbox has seen
little use and may be the best example of a KW Matchbox available (other
than new in the box of course). I have original manual preserved in plastic
with includes the original E.F. Johnson inspection tag. Matchbox works as
new. $400 FIRM plus shipping.

I am looking for a three in one can elect. cap for ah HQ-100 I'm trying to bring back to life. It's 20uf at 450v, 20uf at 450v and 25uf at 50v, pretty standard physical size I believe. Anyone have one they might sell? John K6KOI

## 209. FS: misc Rigs

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-01-04 00:00:00 UTC
From: mailfrmpa@aol.com
Message-ID: <19980104061401.BAA15401@ladder02.news.aol.com>
Source record: 112311

I have the following FS:
Heathkit HW-32, with manual and A.C. supply. This is the original model, SSB only. Nice condition and operable. $75/obo

TenTec Argonaut 505 QRP xcvr: This low power, solid-state rig operates CW and SSB on the (5) traditional bands.Works, looks good, but the diak is out of calibration.W/manual.$100/obo

Hallicrafter SR-42-: This is a tube-type 2m A.M. rig. Works, with a couple of xtals for xmit(has vfo rx). In good condx, with mobile mount and busted mic. $75/obo

Heathkit IM-30, Transistor tester: learn more than you'll ever need to know! Just put some fresh batteries in it, and it works fine. $30/obo, less batteries

Heathkit VTVM, model V7M: Here's the high Z meter you need to service those BA's. Good working condx, but probe wire shows some dry-rot. With manual, $20/obo

Heathkit Laser Trainer: Just assembled and tested, this should be good for something besides blinding pilots! With modulator, but no receiver. About 8mw. $100/obo. Manual is a zerox copy

E-mail if interested.

KMB

## 210. WANTED: Viking Ranger part

Message-ID: <34B1DA6B.A4D53DF3@calweb.com>
Source record: 112122
Cross-posted to: rec.radio.swap,rec.radio.amateur.boatanchors

Hi folks,

A friend is restoring a 600T that took gas from UPS couple of months back and after he put this humpty dumty back together, it still has some problems with no VFO or no injection getting to the mixers. The receiver and all control cables are back with its owner, and I would like to see this Tx finished so I can get it back with its companion toys. Could just be the TX/RX VFO switching scheme with the 600R not being in place, but can't tell without a print to stare at. Any help appreciated.

Tnx es 73

Bob, KE6F

Had my best friends father over, who is not a ham, and he checked out my Johnson Desk KW. He was amazed when I told him the selling price in 1956...$1595 without the desk. He almost -----his pants..."that was my annual salary in 1956". This ham rig cost more than most cars in 1956! Even an entry level job now is somewhere around $20,000. So I am trying to figure how this stuff is overpriced? In my opnion, this piece has lost 80% of it's value in 1998 dollars. Simple facts!

Interesting, but MSRP hardly seems relevant to contemporary pricing.
This
is especially true for "high tech" items. Know what an IBM PDP-11 cost
when new? Can't say I'm sure, but I think >$100,000. My school had to
pay
$75 to get one hauled away several years ago.

```
The price that a collectable, used or antique item
once sold for as "new" is utterly irrelevent.
The market prices the item according to the
tastes and assets of those interested in it.
Whatever it sells for is, by definition,
the "correct" price. If it doesn't sell,
it's over-priced and actually *costing* you money
by the principle of opportunity-cost of capital.
It's all very simple.

73 DE Dave Stinson AB5S
arc5@ix.netcom.com
```

have the following Radio, and electronic equipment for sale. Reasonable offers or trades High End computer EQ. will be considered. All working last time tested unless noted.
Thanks

• Kenwood TS-820S - Digital Ham Transceiver 160-10 meters. Looks good and works well. Comes with hand mic and SSB filter installed. $400

• Tempo-1- Tube type Ham Transceiver/with Power Supply 80-10 meters. Looks good and works well. 100W output. $225

• Siltronix 1011C- 10 meter and CB AM or SSB Transceiver. Looks good and works well. 250-300W PEP output on SSB. $200.

• Motorola VHF Transceiver All tube Model: PA8270J SER.NO: 8697. It receives on 150.750 & 150.570 and transmits on 160.025. There is also a tone Signal and intercom control on front below speaker. This is the type transceiver that was used by police and fire dispatchers in the past.
Don't know if it works.(Make Offer)

• Grubndig Model 2066 AM/FM/SW all tube receiver. Nice wood cabinet.
It isn't working. (Make Offer)

• Heathkit HW 101, 80-10 meter transceiver. No Power supply. It is receiving, but don't know about transmit. Not able to test. Looks are 7/10. As is $100.

• Siltronix VFO Model 80. $75

• National Two/Seventy Ham Receiver with 6 Meter band. All Tube with matching speaker $225.

• Hallicrafters Model S-108 SW Receiver with a calb. Ham band spread. Looks good works well.$125

• Pearce Simpson, Guardian 23- All tube CB Transceiver/with mobil power cord and mounting bracket. Looks and works Good. $125

• Traynor, Group Two B- Audio Amp Head. High/ Low mic. in puts. Master volume, volume, bass, treble and tone shaper controls. $150

• Pro 62 - like new. Purchased 5-6 months ago. Still under warranty. Have original sales receipt box manual etc. It is triple conversion Hyperscan 200 channel scan covers from 30-960 MHz. $150+ shipping.

• Channel Master- Tube Stereo Receiver (Model 6612) and matching amp (Model 6601) Looks good and plays on FM. AM not working. $150

• Sams CB Photofact- Several volumes, some continuos: numbers as follow: Continuos 1- 55 and 57- 65. Individual 70,72,80,88,93,98,104,120,122,128 178,190,226. Also have some two of same number. $4 each.

• AR Inc.- Stereo Amp, all solid state. $125

• Yashica Eletro 35- 35MM Camera with Telephoto 1:4 , Wide Angle 1:4 and Tele-wide finder lense. $100.

Nah. Value, is the key word. Outmoded technology! Present value is to sentimental hobbyists and as a curio and relic, and until these interests were relatively recently rekindled, they were "worth" a very good deal less to most sane people. And to the rest of modern non-enthusiast folks, most of it is ungainly, if not downright fugly. Remember that when newer, smaller, more efficient, better-looking (to the rest of the family) rigs began to emerge, many an avid enthusiast gratefully wheeled hand-truck loads of this stuff out of his home. Analogous to my dinosaur IBM PC Convertible (the first mainstream laptop?) and my cartons of Atari 800 stuff - nearly worthless without a cult following taking specially-inflated interest in them. Also, do bear in mind that prices (as opposed to values) of all curios and relics tend to nosedive overnight when they cyclically fall out of favor from time to time. They do not have the broad appeal of, say, an antique auto that anyone can ride in and possessing widely-recognized attractive styling. I'd never take my boatanchor to church.

Frank

Most of it is, really, overpriced. But, you pays for what you plays with.
Much of that is due to pure greed, by folks thinking they can get rich off
the old stuff.

> Nah. Value, is the key word. Outmoded technology! Present value is to
> sentimental hobbyists and as a curio and relic, and until these interests were

Hey, I use a PC Convertible as a Keyboard for CW. It is not half bad in
that mode, as junker laptops go, and the keyboard itself is infinitely
more keystrokable than the more recent laptops with their toy keyboards.
Dumb, simple, and no frills.....ideal for a CW keyboard --- I would not
trust a big Windeos box to keep from crashing as a CW keyboard.

It mostly depends upon what one considers usable or valuable. As to value,
it sometimes is way out of reality, but as usable, it still can be quite
usable in many ham stations.

Outmoded technology is not any worse then current technology for some
things. For example, CW has not changed practically since the advent
of useful power tubes in the early 1920's even though CW itself dates to
early arc converter work in 1907 in Europe. Frills and bells and whistles
have changed. Sideband has not changed, practically, since Bell Labs
invented it in 1914-16 and applied it commercially in the early 20's,
although hams only began to use it in the 1950's with Art Collin's emphasis
on it evident in his gear, and that of Central Electronics and later Heath.

Some hams can't readily afford kilobuck ``modern'' technology. In that
case, outmoded technology is still quite workable, and if not out of
reach pricewise, a good deal for the buck. Alas, there is a lot of
overpriced greediness in the recent ``love'' of outmoded technology,
and that is a little disconcerting. Still, if one looks around,
one can usually find some good usable outmoded technology, for almost

giveaway prices. It tends to show up at the rural tailgate hamfests,
as opposed to the glitzy capitol city big show hamfests where greed is
the key word.

> laptop?) and my cartons of Atari 800 stuff - nearly worthless without a cult
> following taking specially-inflated interest in them. Also, do bear in mind
> that prices (as opposed to values) of all curios and relics tend to nosedive
> overnight when they cyclically fall out of favor from time to time.

Boatanchors won't nosedive, realistically. The user base is growing too
big for the equipment supply, for the forseeable next 20-40 years.
You won't get rich off them, but they won't go back to peanuts again,
either. The stuff you could have gotten rich off of has long since been
carefully sequestered away by the real collectors (as opposed to the plain
boatanchor freaks).

> They do
> not have the broad appeal of, say, an antique auto that anyone can ride in and
> possessing widely-recognized attractive styling. I'd never take my boatanchor
> to church.

No, but it is fun to haul them around to museum demos, sometimes, and watch
the sparks fly again.....(:+}}....., and it is fun to put an OT Hartley
oscillator and detector and one step on the air and see who can figure out
what it is by its sound (which is usually as good or better than most
modern tube rigs if properly done). A good spark set, will draw lots of
oohs and ahhs at demos, and a good repro of an antique ham station will
usually draw lots of comments from folks a little white around the hairline
referring to some neighbor kid they knew back then. Alas, the usual late
tube boatanchor stuff just draws a few quizzeled looks and a ``gee, my
friend had one of those CB things one time'' comment or two.

Try http://www.tubesandmore.com or http://www.triodeel.com
Can caps are pretty expensive now days. You can leave the old can in
place but disconnect it and wire tubular electrolytic caps under the
chassis. They are cheap.

Source record: 112204

Greetings to BA fans on the UCSD BA Net. I am looking for a few pieces of Hallicrafters gear to finish out my vintage station. I would be interested in any piece in any condition, but obviously would like to find a clean, working unit, at a hamfest price. If you're a dealer or dealing for a buck, don't contact me. If you're an individual owner and have any of the following and seeking a good home for it please get in touch:

Hallicrafters Units needed:

SX-101 Mark IIIA with 160 meters. (Can offer SX-101A to trade.)
SX-88 or SX-122 general coverage unit.

HT-33B amplifier.

SR-2000A and power supply

HA2 2 meter transverter
PS26 Power Supply for HA2, HA6 units

HA1A TO keyer. Last generation unit with octagonal shaped knob set.

Heathkit Units Needed:

KS1 power supply for the KL1 rf deck

HO-13 Spectrum Display unit (often called a panadaptor). Looks like the HO10 RF envelope monitor but has yellow rather than green filter.

Parts units needed: Apache, Mohican, Warrior, Chippewa, SB220, 51J4(R388A), 32V2, 32V3

## 252. FS: TS-520S ++++

Source record: 112205

COMPLETE KENWOOD HF HAM STATION - $450.00 US

Kenwood TS-520S SSB (USB, LSB) and CW transceiver (10-160 meters including WWV position).

Operates either 12VDC or built in 120V power supply. 200 watts (input) PEP for SSB operation and 160 watts on CW. Only 3 vacuum tubes: 2 (6146 finals) 1 (12BY7A driver). VOX circuit, RIT, RF attenuator and NB. Optional Digital (DG-5) display can be easily connected to this radio.

Comes with these matching accessories:

Kenwood VFO-520 remote variable frequency oscillator

Kenwood SP-520 remote speaker

Kenwood MC-50 cardioid dynamic microphone

Kenwood AT-130 antenna tuner

Kenwood YG-3395C CW crystal filter kit installed

All components are in very good condition, inside and out. Second owner. This rig has never been used in contests. Used by non smokers. This radio is above average in overall condition of all the TS-520S's I've seen.

Buyer pays shipping and insurance costs.
E-mail for inquiries.

Source record: 112209

Yep, Mine opened up on my 100 six months ago.

I looked and looked but no one stocks these things any more. Antique Electronics Supply comes close but the 20 mfd section is only good for 20 volts and the can does not even match the holes.

It's more trouble than it's worth so I went and got three electrolytic caps and wired them into the circuit at the bottom of the chassis. There is plenty of space there under the can and no one will know it's there.

Now - when you look through the top cover into the radio - you see the twist can and it still looks stock.

Hope that helps...

AN/TRC-68 tranceiver covers 225-399 MHz AM in 1750 channels. Frequency control is either via front panel controls or from one of 20 front panel programmable presets.

Approximately 12W output. Uses 7609 tube in output stage. Unit operates from 115V 60 Hz and weighs approximately 175 lbs. I have 1 unit fresh from overhaul with a

variety of accessories including the AN/GRA-6 telephone remote control, a discone antenna, cables, and a large aluminum accessory case. The package is crated and weighs

approximately 500 lbs. Available for pickup or shipped from the Rochester, NY area. I will provide freight quotes or a complete packing list on request. First $225 takes it. For additional information call or e-mail Ben at Ontario Surplus (716) 265-9096.

>This
>is especially true for "high tech" items. Know what an IBM PDP-11 cost
>when new? Can't say I'm sure, but I think >$100,000.

My first "personal computer" was a DEC PDP-11/05, with 16K words
(18 bits wide, including the parity bits) of magnetic core memory and
a dual 8" single density floppy (the RX-01). This was the mid seventies
and I believe the price of the setup was somewhere around $10,000.
(the acquisition cost was on the auction paperwork, but I can't
remember exactly the amount).

It certainly was possible to get to $100,000, but this would have been
a fairly large system, perhaps a PDP-11/45 with RM disks and a
couple of tape drives, plus multiple terminal adapters and VT-52's.

Bear in mind that these were commercial/industrial machines and
were not intended for home use. It was only through the extreme
generosity of many DEC repair folks that I was able to get parts
and help in getting the beast to run!

Perhaps computers are not the best example when it comes to
pricing, as they have exhibited a very extraordinary pricing history.

...Peter

Message-ID: <68ujeb$qaf$1@newsd-164.iap.bryant.webtv.net>
Source record: 112071

Yep, I have in electronics class. First they tell you if you charge your cap - Be careful you could shock someone. Of course, then everyone starts charging and throwing these things around shocking people. In the heat of battle, someone hooks theirs up backwards and discovers a new use for electrolytics... soon everyone is doing it... eventually all them are exploded with nothing left but bits of aluminun foil, the aluminum shell and what looks like bits of toilet paper.

Having gotten that out of our systems - Instructor took apart a larger electro with his pen knife and showed us how they were put together.

Much later I put together a few. I mixed my own electrolytic paste and rolled a mixture of cellophane, foil and TP smeared with paste. Results varied widely and I could not make two of the same size that were even 25%. Not worth the trouble!

In fact, could be worse! Typically electro's fail open. A few of mine failed short. On tube equipment - an open filter means a little hum. A shorted filter is another matter - Why put your expensive transformer and rectification stack under pressure until the fuse (or CB if you forgot the fuse) blows?

You could take apart the can and put modern electrolytics inside BUT while it's easy to take apart a can - it's impossible to bend the lip back and make it look stock. It will always look like someone was in there - Try it yourself and you'll see.

That's why you should just leave the dead one alone and place the new boys underneath it.

As for me, I still make electrolytics but now I use a stack of 12 - 20 Gal trash cans to power up my Tesla coils. After a couple runs at night - my TVI complaints dropped to zero...

But that's another story....

>what I did with the two tuning dials on the R-300?

You may also want to check out the DFD (Digital Frequency Display)
product line at the Almost All Digital Electronics (AADE) home page.
The products can be seen at: http://www.aade.com

I recently purchased the DFD2 for my Kenwood 520S and it works great!
I now have a frequency readout that is accurate down to 10Hz. The
display also show what mode you are currently using. The kit is
simple to put together and is simply a plug-n-play hook-up for my rig.

Here is a snip from the AADE page:

"A miniature digital frequency counter designed to display the
frequency of operation of HF, VHF, UHF and SHF superhetrodyne (with an
adjustable IF offset) and direct conversion (without offset) receivers
and transmitters. Also can be used as a bench top frequency counter or
built into other test equipment. Usable to 32 MHz. (8GHz with an
external prescaler)

The unit uses a PIC16C71 microcontroller which has a built in A/D
converter. Two channels of A/D conversion are connected to 15 turn
trimpots. These trimpots are used to input a frequency offset, usually
equal to the IF frequency of the receiver or transmitter. The range of
offset (IF frequency) is 0 to 16MHz in 1000 Hz increments. The unit
then measures the Local Oscillator frequency and adds or subtracts the
IF frequency offset. The result is a display of the actual receive or
transmit frequency. The resolution of the frequency display is 100 Hz.
Input sensitivity is 50 mv p-p to maximum of 5V p-p."

I had really good results when talking to the owner, Neil. He helped
me debug a simple error that I made during hookup and gave me some
great suggestions about the use of the DFD2. One last thing; the DFD
product line was written up in the May 1997 QST.

73s de KG2GT,

Scott Souva

## 282. FS: 814 transmitting tubes

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-01-06 00:00:00 UTC
From: caldbio@dreamscape.com
Message-ID: <68tvq4$30o_002@caldbio.dreamscape.com>
Source record: 112080

A photo of one of these tubes is at www.dreamscape.com/caldbio/814.jpg

For Sale -

814 Transmitting Tubes - General Electric. New, unused, in original boxes with original packing. $25 each + shipping. Nine available.

The 814 is a beam pentode transmitting tube that has approximately one-half the ratings of an 813. It is slightly shorter and about half an 813's diameter. Plate dissipation rating is 65 watts, max plate voltage is 1500, filament is 10 volts @ 3.25 amps. They use a cheapie 5-pin 807-type socket.

I have used 4 of these in parallel to make 1250 watt PEP input, 10-160 meter, grounded-grid linear amplifiers and they work great. A four-inch muffin fan will keep them very cool (no plate color) when hitting voice peaks of 500 ma on a slow meter. I used about 1300 volts on the plates. Have some fun and build a linear!

Mort Caldwell W8IFN caldbio@dreamscape.com

# 283. FS: Bogen 30 watt audio amplifier with lots of inputs. It's not RF, but is a boatanchor!

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-01-06 00:00:00 UTC
From: caldbio@dreamscape.com
Message-ID: <68u02g$30o_003@caldbio.dreamscape.com>
Source record: 112081

Price is now $75 plus shipping - please disregard the $110 price below. This would make a great speech amp for driving modulator tubes for a big HB AM rig! It has mike inputs galore and four output impedance selections.

Bogen M330 Series E-70 Tube-type Audio Amplifier for sale.

30 watts output. Three transformer-coupled microphone inputs with individual mixing gain controls. The three octal-socket (on chassis top) plug-in microphone transformers are Bogen 45-9305-01 for low-impedance dynamic mikes. Mike Inputs are to 3-pin XLR connectors on rear panel. Input # 1 is switchable (front panel) to crystal or magnetic phono inputs and also to tuner input. These inputs are via RCA phono jacks on rear panel. Mike input #2 has a switched speech filter.

Output impedance is 4, 8, 16 ohms or 70 volts. Rear panel output connectors are a 6-screw terminal strip and also two each large 5-pin sockets. Amplifier also has a separate tape output and individual treble and bass controls.

Amplifier is unmodified except for four each input and output connectors neatly installed vertically on the front panel 3-inch side margins, outside of the amplifier cabinet. These phone, RCA phono and 5-way jacks are not wired. There are no modifications to amplifier circuitry or rear panel I/O connectors.
All parts and components (except for output and rectifier tubes) are original.

Output tubes are two 6L6GC (new).
Other tubes are 12AX7 (2), 7247 (1) and a 5AR4 rectifier.
Cabinet is 19" rack mount, 7" high and 12" deep.
Cabinet appearance is good, with no paint chipping except for small spots around rack mounting screw holes. The chrome panel surrounding the controls does have some minor pitting, but looks good.

The amplifier has been recently tested and is ready for use.
Price: $110 + shipping. Weight is approximately 15 pounds.

Mort Caldwell W8IFN caldbio@dreamscape.com

From: Dan Wroblewski <wroblews@isl.net>
Message-ID: <34B31E1E.4384@isl.net>
Source record: 112084

Does anyone out there have a schematic for a Data Precision Model 134 Digital Multimeter (circa 1973)? Yeah, I know it's old and probably not worth fixing, but I got it free expecting to salvage some parts from it and found out that most of the functions work OK! The problem I am seeing is that when I set it to read DC volts (I do a lot of work with old tube gear), the reading is not consistent across adjacent ranges.

It's a decent looking benchtop meter and if no help is available I can always calibrate it for one DCV range. I also contacted ANALOGIC (the company that bought Data Precision Corporation in the 1970's and although they are familiar with the model, they no longer support it... I'm not surprised).

Thanks in advance...

-----Dan

## 287. Solid Stating Tube supplies?

Newsgroup: rec.radio.amateur.boatanchors

From: Visitor5 <*spamsaver*_zlz1@cornell.edu>
Message-ID: <68udi9$6sh@newsstand.cit.cornell.edu>
Source record: 112085

Hi All,

I've recently aquired a DX100 and was having some problems finding the required 5r4gy and 5v4 rectifier tubes. I was curious about replacing them with solid state diodes and reducing the heat in the chassis as well as improving the reliablity. But some folks warn that you need to have voltage dropping resistors in with the diodes to keep from getting overvoltage conditions because of the lower voltage drop of the solid state diodes. Does anyone have any detailed info on how to calculate them or if they are really needed? How much voltage drop is there in the tube under normal operating conditions?

Any help or pointers would be appreciated.

Thanks

Kevin, WB2EMS

Sounds interesting,where would I find more info on this unit?
Any web-pages out there?
I have a Kenwood R-300 that might like this addition.
How well does it work,accurate??
The R-300 requires a lot of jigging around to tune it
(on SW anyway).
Would this unit display the correct frequency no matter
what I did with the two tuning dials on the R-300?

Thanks

## 293. Collins KWM-2 with Waters

Newsgroup: rec.radio.amateur.boatanchors

Hey JW, I've only seen one of those boatanchors. It's the one I bought one day. Labeled Lafayette Model HA-350, it's a tube rig, but I haven't had much time to play with it.

It looks nice, but it's big enough and heavy enough to anchor most any boat under 60 feet!

Tom KD4AKC

## 305. Zenith Transoceanic

Source record: 112142

Built in 1948 and costed $128.40 back then. 1st model of the famous Budlong series. 42,034 built that year.

Problem of shortwave fading is fairly common in older TO's and easy to fix. Many TO's were stored with the "AM" switch pushed in. Contacts in the open SW switches tended to corrode.

A small shot of DeOxit or Carbon Tet will fix that problem.

Good price for a Great Classic Radio.

Comparing BA computer prices to BA radio prices is, of course, ridiculous.

I can place my 60s-era Galaxy GT-550 on the air and compete in a contest or DX pile-up against modern day rigs - the radios work in an equivalent fashion well enough so that only operator skill determines the outcome.

My 50s-era Globe Scout transmitter sounds no different on the air than a modern day transmitter.

Contrast the *performance* of old vs new rados, to that of old vs new computers and you'll realize the pricing schemes do not carry over.

According to the info on my speaker-receiver WWW page, it is the
NC-125TS, grey hammertone 10" (probably identical to the NC-98TS).
National seemed to give a matching model number for each receiver,
even when the speaker was identical across receivers. This practice
didn't change until the NC-303/NC-400/NC-270 days.

If you go to my speaker-receiver matchup page you can find a link to
a picture of the NC-98TS at least.

I have the fllwg NOS Sprague Twistlocks, if either will get you by:
- TVL 3678 - 20-20-20 @400-400-25;
- TVL 3744 - 40-40-20 @450-450-25.
They come with a new mounting wafer, so you can do the job right.

Suggest check actual circuit for the 50v section & see if 25v will do, or use
separate/common/cheep 25 @ 50v - I can probably toss one in for you. You can
have either of the NIB caps for $28, including Priority Mail.

Frank

## 327. 12 volt pilot lights

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-01-06 00:00:00 UTC
From: nutmeg@wport.com
Message-ID: <884123284.1727201282@dejanews.com>
Source record: 112159

I have an LM15 power supply that uses what looks like a 1/2 inch diameter edison screw base pilot lamp at 12 volts. Seems like this base size is now unobtainable, and I hate to modify the unit. Does anyone know of a source or have any bulbs they would sell?

Thanks,

Pete (nutmeg@wport.com)

## 329. Hallicrafters For Sale

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-01-06 00:00:00 UTC
From: k4fb@mindspring.com
Message-ID: <34b2ac8d.1882484@news.mindspring.com>
Source record: 112161

I have for sale the following Hallicrafters:

2 HT37 Transmitters
1 SX111 Receiver

All of these units are in excellent condition and are all original.
They have the original manuals and a 110V Dow key relay
is included with the radios. I prefer to sell all as a package
and would prefer a local sale especially since the transmitters
are so heavy. I live about 50 miles NE of Atlanta about 5 miles
off I-85. Price $425 for the package.
e mail to k4fb@mindspring.com

Thanks,

Terry, K4FB

I had a 350. That radio is hardly a "boatanchor"!
It would be suitable for a small canoe, perhaps...
You want a manly anchor? Buy a SX-42 or SX-28.
The HA-350 is a cute little fella about the same size as
the S line receivers.

I have bought from Larry before, and always thought his prices were fair. I've seen some real price gougers on this group -- and Larry isn't one of them. 30 bucks for a working boatanchor meter movement is not exhorbitant or out of line. If you don't like the price, make the man an offer -- but I would bet the meter is sold three times over before your email arrives.

>>pretty
>>> standard physical size I believe. Anyone have one they might sell? John
>>K6KOI
>
>

What size can?? 1 inch or 1-3/8 inch?? AES has NEW
Aero M FP-type capacitors in stock. They offer a 20/20
dual at 450 volts, and a 20/20 at 450 with a 20 at 25 volts.
Both caps list for $19.95. Those are 1" mounts.
They also offer a quad section 4X 20 at 475 volts
for 25 bucks, it is the 1-3/8 " mount. Just leave two
sections unconnected.

They have a listing in New Old Stock that would
work -- 3X 20m at 450volts, FP style, 1-3/8" for 19.95.
AES 1 602 820-5411

What is the 50 volt section being used for? If it is for
cathode bypassing of the audio tube, I would check and
see if the 25 volt rating is more than adequate. It is also
very easy to use a modern electrolytic with radial or axial
leads with a 50V 20mfd rating right at the cathode pin of
the tube socket -- there is no need for this capacitor to
be in the "can".

I was lucky in that they had a unit that fit my HRO-50 perfectly. But
yeah, it's a crapshoot to find them in stock anymore.

> It's more trouble than it's worth so I went and got three electrolytic

> twist can and it still looks stock.

Has anyone ever attempted to yank out the old guts and stuff modern
elctrolytics in the original case...? Sees as though if you could
get through that crimp at the base and extract the guts, you might
be able to rebuild it that way (though I've never tried myself). I
think that some guys who restore antique radios make it a practice
of hiding modern components (resistors, capacitors) within the shell
of their original counterparts. Not me, though: "orange drops" all
the way... :^)

Speaking of rebuilding: isn't there a business somewhere in the U.S.
that *does* rebuild electrolytic cans, and not in the kludgy manner
described here...?

C.K.

>

The easiest way to get >supurb< audio is by taking it of fthe "DIODE
LOAD" point at the rear of the receiver.

Connect an 10ufd 50Vor less non-polarized capacitor in series with a
470K resistor. Connect a standard phono lead/RCA plug from the end of
the network and plug it in to the AUX input of any stereo amp. You
will be amazed at the results.

I have a Klermouous audio chassis in one of my R390A's and while it is
wonderful, the proformance of this simple device eclipses it.

I have 2 variable switching power supplies for sale or trade. Will trade for 120v/10A varaic.

4.5v-6v @ 20A
9v-15v @ 10A

These are really nice units look new and work great. Heavy duty construction. These cost about $175 new each. E-mail me with offers if interisted.

Also I have 3 15Kv 30ma neon sign transformers for sale for $20 each.

I have a really clean and nice Hallicrafters SX-101A that I would like
to sell or trade for other gear. Am interested in Drake, Swan, Atlas
or similar. I will sell this receiver for $200 but will not ship it;
pick up only or I will meet you within a 50 mile radius. Receiver can
be seen at the web page below.

73's

Frontier Electronics was rebuilting twist locks. However, in the last
issue of ARC he announced they would no longer be providing that
service as it was too labor intensive. BTW, Frontier is another
source for NOS electrolytics.

For sale:

Eico 720 CW Transmitter
Uses tubes
Crystal socket on front
Needs paint and cleaning
I think I've heard that these rigs put out 50W or so.
Operational condition unknown, as I've never used it. Everything
glows like it should, but I haven't transmitted.
You can get a manual from http://www.w7fg.com
I've seen VFOs (Eico 730) for this rig in rec.radio.swap recently.

$65.00 shipped UPS Ground

Thanks,

Basil Darin Arrick, KB5KHR

I frequented the local Lafayette Radio Electronics store
in the early-to-mid 1960s.

If I recall, many of Lafayette's tube-based shortwave receivers
were actually manufactured for them by Kenwood/Trio in Japan.
They were sold in an era when US consumers preferred American
made radios to Japanese-made radio equipment.

It's not impossible, you just need a bead roller. You can make one
out of a defunct can opener. Just replace the opener's sharp wheel
with a blunt one having a face radius of the bead you want to roll.

That screw base is the same size as the oldfashoned Christmas tree, series
light strings (8 to a string.) If yoy have some old friends they may have
some and if there is room, it would do well for you. I used to use those
as headlight in my old Lionel engine.

For sale - one Tentec Scout outfit.

Love it, second one I've had.

Scout, hand mike, desk mike, noise blanker, power cord, manual,
modules for 160 80 40 30 20 17 15 10. May have bracket, not sure.

Top is a bit scratched up, speaker is not so hot; I use earphones. Haven't
had time to fix speaker up.

Great CW and SSB radio. $495.

Please e-mail directly to n9gg@dxer.com.

Tnx and 73. Happy New Year!

Bob

> Thanks

> Kevin, WB2EMS

It depends alot on the type of gear you are using. Many ham equipments
were operated marginally by design, so if it had 25 volts of drop through
the rectifier tube, they added 25 volts worth of winding to compensate.
Unfortunately, the components were often stressed to the max and not
rated additionally. Thus, when you replace them with solid state by
merely inserting in the diodes, you can overvoltage the equipment.
Military equipment is usually much more rugged, and most of the time
will swap directly with little problem. As a rule of thumb for the
average commercial ham gear, figure about 25 volts of drop for any
given rectifier up to maybe 50 volts of drop (find in the tube spec
sheets). Run that through ohms law for the current and scale the
resistors by a factor of 5x for the power and you should do fine.
You play a game in trying to assess what you want or think should
be the optimum value of voltage drop for your particular need.

For example, the DX-100 probably has around 400ma plate current load
in AM mode on the HV supply. At a 25 volt drop, 400 ma would require

E=IR R=E/I R=400/25 or 16 ohms.

P=VA P=(25)(.400) or 10 watts scaled x5 or a 50 watt resistor

You could add a little more resistor at higher rating and use that
to work the rig a little less stressfully in conservation mode, and
make the rig run some additional lifetime at slightly reduced power.

Put the resistor in series with the diode in each leg of the rectifier
and you can reduce the wattage by half.

Anything from 10-50 ohms per leg at 25 watts rating per leg should work, but try to match them within 5% or so for best results.

If it is something like a dual diode fullwave rectifier, then you can use one resistor of the full rating and Y the diodes into the resistor.

Build it into a tube socket, and make sure it is sufficiently insulated from surroundings and can dissipate the heat.

That is how I do it.

Bob/NA4G

Ed, have you thought of plastic coated steel fishing leader? It can be purchased in 30-40 lb test and should work good for dial cord. Collins used it on some of their equipment. They also sell clips to go on the ends of it to clamp a loop. I am going to re-string my NC-300 with that soon.

# 387. Boatanchor Parts, Accessories, Stuff for Sale.....

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-01-08 00:00:00 UTC
From: radiorob@serix.com
Message-ID: <34b52774.18500332@nntp2.uunet.ca>
Source record: 111973

Hello Folks:

I have the following Boatanchor items for Sale. All Prices are in
USA Dollars..and Shipping is Extra. I have tried to describe these
items fairly.....happy to answer any questions on any item.

Please Email me direct at..... radiorob@serix.com to reserve any
of these items.

Thanks...ROB VA3SW

##########################################################################################################################
Johnson Tube Sockets .......Large Sized for 211's , 845's etc.
These are the heavy porcelin sockets with Metal Chimneys. They are
great for buiolding homebrew Transmitters....or for displaying big
Transmitter Tubes. These are getting very hard to find now...all the
Big audio boys are scooping them up for their 211 Audio Amps!!

Used Condition.....VG++ These are nice !!!

PRICE is.....$10.00 USA Each

Have 4 of these.......

##########################################################################################################################
Johnson Tube Sockets.......Smaller Sized for 201A's, 807's etc.
These are the same as the Above sockets....but are Smaller sized.

Used Condition....VG++ These are nice!!

PRICE is.......$7.00 USA Each

Have 4 of these....
##########################################################################################################################
Heathkit VF-1 VFO . This is a complete unit...but I'm gonna call it a
Parts set. Everything is there.....All the Knobs, Dial, Face plate and
Case. The only thing missing is the front and rear plate screws.
However....some rocket scientist has drilled numerous holes in the top
, bottom, and rear of the case...why...I don't know!! Without the
drilled holes...this would be about a 7-8 out of 10. If you had a
real nice case.....this would be a great set to put in it.
Anyways....whether you part it out...or restore it.......

PRICE as is.........$10.00 USA
##########################################################################################################################
Heathkit AM 2 SWR Meter. Grey Wrinkle painted. With Large square
Original Heathkit Meters. Working Fine. Original Knobs. Early 1960's
Vintage......Goes great with the DX 35, DX40 etc.

Clean and in
VG++ Condition.

I have 2 of these....One has a drill hole in the back panel......the
other one is fine.

PRICE.....Drill Hole .....$15.00 USA

.....No Hole.....$20.00 USA
##########################################################################################
Heathkit Model HD-11 Q Multiplier. Heathkit 2 tone green. All original
Knobs. Has a Toggle switch Mod on the front .....nicely done.
VG Condition...some paint wear on outside case. Front panel is nice.
Untested.

PRICE.....$10.00 USA
##########################################################################################
Heathkit RF Probe. With Phono Jack Cable and Alligator Ground strap. 6
1/4 " long. Red Plastic on one end...black plastic on the other end.
With Metal probe. Not sure which model scope this is from.....

Exc. Condition.

PRICE.....$3.00 USA
##########################################################################################
Millen 90671 SWR Bridge. With Manual and Original Box. Black Wrinkle
Paint. Ser# 1496.

VG++ Condition.
Box is Scotch taped.

PRICE.....$25.00 USA
##########################################################################################
Millen 90672 Antenna Bridge. With Manual. Black Wrinkle Paint.
Ser. # 2252. Complete with 3 Plug in Coils. Has nice Millen Half Moon
Meter.

Exc. Condition.

PRICE.....$35.00 USA
##########################################################################################
Johnson Low Pass Filters Model 250-20. Long Aluminum Tubular shaped
Filters ....9" Long. Coax Connectors on each end. Has a Johnson Viking
decal on the side of the filter.

VG Condition.

PRICE.....$10.00 USA each

Have 2 of these.....

##########################################################################################
Dow Key Relays
110 AC

VG+ Condition

PRICE.....$20.00 USA each

Have 2 of these.....
##########################################################################################################################
Advance Electric Key Relay.....Similar to Dow Key Relay
110 AC

EXC...like new condition.

PRICE.....$25.00 USA
##########################################################################################################################

That's it for now.....73...ROB.

PRICE.....

## 388. Wanted: Unbuilt Vintage Kits

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-01-08 00:00:00 UTC
From: nick@cs.unc.edu
Message-ID: <693ahm$989@altair.cs.unc.edu>
Source record: 111974

Wanted - Unbuilt vintage tube-type ham radio kits. Will serious
cash or trade other vintage gear.

I'm not a dealer or speculator. I just have a thing about the old
Heathkits and Knight-kits, etc. that got me started in electronics and
would like to preserve some unbuilt kits for the future.

Also interested in tube-type unbuilt audio kits.

Message-ID: <6947uj$d23$1@newsd-144.iap.bryant.webtv.net>
Source record: 111987
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.amateur.misc,rec.radio.amateur.equipment

I don't know if this qualifies as a "Boatanchor" but I would probably think so if I didn't want one....
I am looking for a real RTTY input and printing station....I am NOT looking for software, a multimode TNC, or any piece of equipment which requires a computer.
I have never seen an RTTY station...but I imagine it is prob very similar to an old printer dumb terminal or an old TELEX station....
If anyone out there has one of these, or can point me in the right direction I would certainly appreciate it.

73
Alex (Getting my ticket finally punched at the end of Jan - Call sign soon to follow!)

PS if you post to the NG an answer pls CC it to my mail box as well....

## 406. FS NOS ARC-5 Receivers

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-01-08 00:00:00 UTC
From: kb0upl@aol.com
Message-ID: <19980108011301.UAA19181@ladder02.news.aol.com>
Source record: 112036

I have for sale 3 NOS ARC-5 receivers mounted on a FT-220A rack.
When I got thies receivers they were in the box but I removed them and put
them on the FT-220A rack so I could display them. I do not have the orig.
boxes.
The receivers I have are:
R-23/ARC-5 black .19-550kc This receiver is the only one that had a mod.
Someone added a 1/4 phone jack to the frount panel. this receiver has a used
dynamotor but it is in very good cond.
R-24/ARC-5 black .520-1.5mc with NOS dynamotor
R-27/ARC-5 black 6-9.1mc with NOS dynamotor
FT-220A Rack rack is used but is in very good cond. Black

I would like $300.00 for the lot or best offer. I am also interisted in trades.
I am looking for Navy shipbord radios, Ships clocks, Navy manuals, Navy misc.

Thanks & 73s John Richardson kb0upl

## 407. For Trade: Heath SB-634 Station Console

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-01-08 00:00:00 UTC
From: w5jv@juno.COM
Message-ID: <19980107.193924.8958.4.w5jv@juno.com>
Source record: 112037

Looking for the station console to the earlier SB3xx/SB4xx series and have the SB634 (later silicon generation station) to trade. Will consider a repairable monitor scope or panadaptor or perhaps a single 4-400A. The 634 is dusty but looks fine.

FWIW Department: If anyone is nostalgic about 8 bit computers and could use a box of Commodore items, apply within.

73, Doug W5JV

w5jv @ juno.com

## 408. Loctal Tubes Need Good Home

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-01-08 00:00:00 UTC
From: w5jv@juno.COM
Message-ID: <19980107.193924.8958.5.w5jv@juno.com>
Source record: 112038

GE to everyone,

I have a box of well over 100 loctal tubes, most are 3 digit numbers. If you restore equipment using same and need a supply of loctal tubes, get in touch. I have no way to test them but I have no reason to believe that they do not work. They are available for shipping charges from 70806 plus some token trade offer related to the amateur BA sport. The right song and dance following the Rules of Ware will also work if I know you.

73 to all,

Doug W5JV

## 411. Re: Choke for Yeasu Musen

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-01-08 00:00:00 UTC
From: commquart@aol.com
Message-ID: <19980108025801.VAA04727@ladder02.news.aol.com>
Source record: 112041

<< I have been able to get most of the bad parts except one,
a choke. I need a 2.5H 150ma choke. Yeasu, Gateway, and Newark
electronics all were no help. If anyone knows of where I might find
one of these chokes or what might be an appropriate substitution,
please let me know. >>

Ed

Pardon me, but are you looking for a 2.5 Henry
power supply filter choke, or a 2.5 milliHenry RF choke?

If you had a typo, AES carries Hammond RF chokes -- they
have a 2.5 mH 160 mA choke for $4.70. Part number is
PC1535B.

They also have Hammond 1.5 Henry 200 mA filter chokes
with 2-3/8 mounting centers for $11.33. I suspect you might
be able to get by with a 1.5 in most cases.

Antique Electronic Supply 602 820-5411

Good luck, and hope this helps.

## 413. Tubes(and other stuff)for sale..

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-01-08 00:00:00 UTC
From: Bob Weiss <bweiss@NOSPAM.carroll.com>
Message-ID: <34B445BD.9E384133@NOSPAM.carroll.com>
Source record: 112043

Hi all! Cleaning up the shack and want to find homes for a few things ive acquired over the years..

Various NOS tubes, transmitting/industrial and general types. Includes a lot of JAN miniatures and a few desirable audio types (6550, 1614, amperex stuff) some transmitting types (807, 829B, 816, 4-65) and a few really strange types (2AP1-A scope tube, 20PE14 vidicon, VT-127 radar modulator tube)--approximately 250 pcs all together No useless series string TV types in the bunch! Good assortment for BA repair, vintage test equipment, etc. All tubes are NEW in boxes (all original, some in JAN white boxes) asking $ 500 for whole lot, or will sell off the rarer types at reasonable prices.

Mostly restored 1947 RCA 630TS television set! All tubes good-including 10" round CRT! actually makes a picture now after a few repairs (new tubes, filter caps, resistors in PS) Could use an alignment, but I dont have an old sweep/marker gen to do it! Cabinet in original, good condition--nothing done to it by me. Even listens to local taxicabs on channel "1" Asking $200 plus shipping and crating (HEAVY!) Would prefer pickup at northern NJ QTH..

Panasonic 1983 vintage portable broadcast/ENG camera. Single tube pickup with built in bar/tone generator and genlock.SONY motorized auto iris zoom lens. Batteries, charger, and 1/2" VHS portapak VTR. System works GREAT! (Just shot my wedding with it!) LOOKS very professional too--get great man in the street stuff-people will think you are 6:00 news if you go with a group! For the advanced amateur video person/media pirate/culture jammer. Asking $300 for package.

Also in the same vein...become your own broadcast station!

7 Watt PLL FM broadcast band TX housed inside a TEAC stereo cassette deck.
Unit looks like normal cassette deck, except MUCH heavier, and additional BNC antenna connector on rear panel. Will broadcast directly from the cassette deck for unattended use, or put deck in "record" and will accept line level audio applied to "Record IN" jacks on rear panel.

Transmitter circuit is homebrew clone of Northcountry MPX96, followed by 7 watt PA module removed from commercial FM broadcast exciter. Additional circuitry is powered by internal 24 VDC linear power supply ,

fed from the 120 VAC line. Unit has extensive RF shielding and low-pass filtering for spectral purity. Built by professional electronic instrument designer (myself). Operates from 88-108 MHz, selectable by DIP switch. Crystal controlled subcarrier and PLL synthesizer stages. A

great way to get on the air FAST with a commercial-sounding signal!
Asking $500 plus shipping.

Working color TV -19" Sharp-good pix FREE with any of above if you pick up. $20 by itself.

remove NOSPAM from above address to reply

73,
Bob Weiss N2IXK

Hello:

I have 9 Marconi RK39 Tubes. These are New in Original Red/Black Marconi Boxes.These are larger sized 4 Pin Tubes....Made in CANADA. I believe these are transmitter tubes ....but I don't know what they are used in.....

PRICE for all 9 Tubes.....$20.00 USA + Shipping.

Please Email me direct at..... radiorob@serix.com to reserve these tubes.

Regards........ROB VA3SW

## 434. 1998 San Antonio, Texas Swap Meet

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-01-08 00:00:00 UTC
From: rblank@texas.net
Message-ID: <34b704cb.36850142@news.texas.net>
Source record: 112064

The San Antonio Radio Club is presenting it's 1998 Swapfest on January 10, 1998.

It will be held at the "Country Gold" dance hall at 7405 Old Pearsall Road. Old Pearsall Road is west of IH35 south of San Antonio off of Loop 410. Exit onto Loop 410 from IH35 south of San Antonio and go west on 410.

Take the Pearsall Road exit and go left or south approximately 1.7 miles to "Country Gold."

Tables: $6.00
Admission: $3.00

Setup begins at 7:00 AM, doors open to the public at 8:00 AM.

There will be hourly door prizes, Preregistration and Grand Prizes given away at the fest...

For more info, e-mail swapfest98@juno.com or call Royce (KA5OHJ) at 210-680-0432

Thanks and hope to see you there!

Rick, KI5SL

## 435. Royal Airforce Tubes for Sale.....

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-01-08 00:00:00 UTC
From: radiorob@serix.com
Message-ID: <34b50728.10231429@nntp2.uunet.ca>
Source record: 112065

Hello:

I have a set of 6 British Royal Airforce Tubes for Sale. These are used Tubes...untested. They are very clean with all original markings.

The 6 tubes include the following........

Brimar 101/9D2/10E11095

VR106/9/10E11095/NAPL102

VR107/ 2/ 10E11097/NAPL102

VR106/9/10E11095/NAPL102

VR108/10E11096/STCC101

Brimar 101/9D2/10E11095

Each tube has it's own White Porcelin Socket which is numbered V1 to V6. The tubes and sockets are 7 Pins. I believe this was actually a spare set of tubes that was carried for their Receivers. These are circa 1938???

PRICE for set of Tubes.....$25.00 USA Postpaid in USA/CANADA

Please email me direct at..... radiorob@serix.com to reserve these tubes.

Thanks...Regards...ROB.

Well, fellow collectors of good junque, I've a bunch of "stuff"
that I've decided to part with. The four enclosed lists are of
just whats piled at the entrance to my 20x30 gold mine of radio
and electronic goodies, and needs to be out of my way.
I'm not a commercial vendor or decided collector of anything so
I have no real idea what to ask for this stuff, so I will accept
reasonable offers (the highest of course) plus shipping for any
of these items. I'd prefer to sell things like the manuals and
catalogs as a lot as I've listed them rather than one at a time,
but will seperate them if no one wants them all.
My zip is 74075 figure shipping fron there, most everything is
small enough to ship. Now, let's talk about the radios, my first
choice is ti have the buyer pick them up because I have no boxes,
or packing material to ship them. So, if you want them cheap you
should figure on picking them up, otherwise expect to pay more
and endure the delay until I can come up with packing,

## 437. Yaesu Musen Radios

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-01-08 00:00:00 UTC
From: KF6NZF@QSL.NET
Message-ID: <Se9t.2$22.89694@news.connectnet.com>
Source record: 112067

I have recently acquired a Yaesu Musen FRdx400 Reciever and a FLdx400 Transmitter. The Transmitter has some burned components but the reciever works fairly well. Can anyone tell me anything about these radios? I'm a new ham (4 Months) and don't know the older radios very well.

Any information would be appreciated, ie. how old?, worth fixing? etc...

Thanks

Ed (KF6NZF)

Am still in search of an original (1946 model) S-38... this one
is identified by an olive green finish, and a noise limiter switch
and knob-tunable BFO on the front panel.

Am not necessarily looking for a museum piece, but neither am I
looking for one that appears to have been tied to a car bumper
and dragged down the freeway ("normal" wear and tear associated with
50 years of ownership OK). Also prefer that the back panel has
survived and is still with the radio, as is the original speaker
(an unoriginal or missing knob or two is not a problem, as I have
a few spares).

Heck. mine provides thoroughly adequate audio output. All I did was add a 600 ohm to speaker transformer on its output. It is designed to have a 600 ohm output impedance if you analyze the circuit carefully. Once matched it does pretty well in its tailored frequency response sort of way.

Jeff,

Here's the pin out and voltage/current info:

Pin 1 - Common/Ground

Pin 2 - N/C

Pin 3 - 450 VDC @ 100 mA.

Pin 4 - N/C

Pin 5 - 6 V. (DC or AC) @ 1.5 A.

J. Herman wrote:

CABLE

I think I have the order correct. ID Pin #1 as Ground to verify.

From time to time, Fair radio has had the manuals.

Also, you might try one of the Publication Centers, such as:

US Army AG Pub Center
2800 Eastern Boulevard
Baltimore, MD 21220

(301) 962-7218

May only be available on microfiche due to age?

> you would think its a mis-print!!!!!!!!!!!!!!!!

I mentioned this price yesterday when I was talking to the Drake service people and they thought it was a bad joke. They know the capability of that receiver and the value of a collector rig should in some sense be related to performance.

I have a Teletype Corp model 28KSR (Keyboard Send/Receive). There are no computers or electronics in this unit; it is all gears, belts and levers. It stands about four feet high, is heavy and awkward, but it is yours free if you arrange to have it picked up or shipped.

I am located 40 miles south of Reno, Nevada.

Hi All,

I'm sorry, but I made a mistake on my last post yesterday. There is no such thing as a FT-570 as far as I know!

I have an Yaesu FTDX-570 transceiver for sale that was running very well recently but is now blowing fuses. It needs someone to lend a little TLC and it will be a great rig. I am asking $220.00 + shipping. Contact me if you need any info!

Source record: 111993

Hello Kevin,

I'm surprised that you are having trouble finding the 5V4 and 5R4 rectifiers - they are pretty common. I can supply a set if you need them. NA4G's post on the use of silicon diodes and dropping resistors is right on the money, but I'll add some comments:

1) If you do use silicon diodes/ dropping resistors, mount them in a base from an old tube rather than changing the rig wiring. That way, if you can swap between tube and silicon rectifiers with no trouble.

2) The high voltage supply in the DX-100 uses a choke input filter, and the peak voltages at turnoff can be rather astounding. Use at least 2000 PIV of diodes per leg - 3000 is not too much. The low voltage is capacitor input, and not so fussy.

3) Be sure to replace the bias rectifier with silicon diodes if you do the others. (I think the bias rectifier is a 6AL5). There is a significant time delay between power turnon and the rectifier output when using tube rectifiers that is reduced to near zero with solidstate. You do NOT want the set to have B+ (low or high) without bias voltage, even for a short time.

4) You may want to consider keeping the tube rectifiers just for the time delay effect mentioned above. Research and experience has shown that tubes last longer if the high voltage is not applied until the heater has had a chance to get the cathode up to temperature. The 5V4 is an indirectly heated type, and gives several seconds delay, which helps the other tubes in the rig last longer. If you put silicons in, the low B+ will hit the entire set the instant you turn on the power. Hard on the tubes, and can also be hard on the electrolytics.

Hope this helps. The DX-100 is a fine rig, and there are some mods which make it sound even better.

The rig here is all-homebrew and all-hollow-state. I use 5V4, 5U4, 5Y3 and 866A rectifiers, bought at hamfests for almost nothing and have little or no troubles with any of them. I put 16 years on my first pair of old, used 866A's before one of them failed about 2 years ago - the only failure experienced.

Hope this helps.

73 de N2EY

Cross-posted to: alt.ham-radio.marketplace,mi.forsale,rec.radio.amateur.boatanchors,rec.radio.amateur.equipment,rec.radio.amateur.swap,rec.radio.swap

For Sale:
Drake 2A Reciever and 2AQ Q-Multiplier/
Speaker. Both are excellent condition, everthing
is original, no mods. 2AQ is cosmetically perfect.
The 2A has one small paint scratch on right side
at the rear, everything else including all knobs,
switchs, front panel lettering, is perfect. There
is some dust inside, I've never had the cabinet off.
Everthing works fine, except the senisitivy on
15m -10m is kinda low. This set has optional crystals
for coverage of all of the 10m band and 26.9 - 27.5 Mhz.
Includes original manual. 2A s/n is 816. It also has
the 2AC xtal calibrator.
I also have a new boxed 6BZ6 and 6BE6, that I never got
around to trying in the set (to bring up 10m sensitivity.)

$165. for the set, plus $10. shipping usa/48

It's a good amp, but have you installed a bypass relay so that it can
be used with a transceiver?? As you know, it's set up originally to
only be used with a transmitter, i.e. no receive switching.

Tubes are mostly standard items except for the 4D32 final.
Recently, Fair Radio Sales of Lima Ohio had 4D32's at a fair price.

Antique Electronic Supply - Tempe, Az will have the other tubes.

I've got a 32V-1 xmtr - a great old boatanchor that I've used a lot.
I've had my final in place for years. The 4D32 seems to last forever
if not abused.

Source record: 112008

Dana: For some strange reason there seems to have been an outbreak of Lafayettenostalgia on the east coast. I was the first victim. Luckily I was cured when Ron, N8LMT, provided me with a very nice Lafayette HA-600. This was my first SW receiver. I got it around 1973 (for Christmas). Sold it a few years later in an effort to raise funds for a Drake 2-B.

Ron's radio arrived last night. It was a real thrill to pull that radio out of the box. I was struck by how solidly the thing was put together. Even though it is solid state (simple solid state - no IC's) it really is a very hefty radio. None of the flimsy cardboard back panel stuff you see on some of the other SW receivers.

Ron sold me the RX at a very steep discount because its not working. (A hamfest buddy of mine tells people, "I pay extra for that!") I hope to get it going soon.

I have a copy of the 1974 Lafayette catalog. If you want a copy of the HA-800 page, send me your snail mail address.

Nyone have any ideas on where to get a schematic or manual for this radio?

From: mrbruce@bellatlantic.net
Message-ID: <34B7D497.335F@bellatlantic.net>
Source record: 111880

greetings. I really would appreciate some help fixing up a Clegg Venus 6m rig. I could use any documentation avaliable, Schematics and instruction manual. For starters a pin out from power suply to radio is needed.
Right now when plugged in, one tube up front in the receiver section glows a funky purple color that seems unhealthy. The S-meter peggs itself and thats about it. no other tubes light up, no audio , no RF out on meter, no cathode current seen on other meter. The light bulbs for the radios display do not light up, but on the little ne2 for the power supply pilot light lights up....so my guess would be this one tube is oscillating or dying and I have no heater voltage to the other tubes. Now would these heater elements be in series or parallel?? This is why I need schematic...hihi....
Also i have repaired a few old Philco receivers. I used a variac to rejuvinate all the wax paper caps by slowly increasing ac voltage a little bit day by day... This rig looked a little newer than my Prewar Philco, the wiring wasnt covered with cloth instalation, and the caps seemed to be made of more a cardboard-like shell. Are these caps rejuvinatable like the wax paper jobs... ?
Thanks for reading, 73, N3RIK

>more output of the audio stages. Is there a site or faq or mod sheet
>for R390A material that I can find on the internet?

>Thanks

>Bob Keys/NA4G

I have a couple of R390 receivers. One of the more
common problems is having a failure of the 3TF7
Ballast tube that is used in series with the filaments
of the PTO and VFO tube.

Note that ALL of the filaments in the R390
are in various forms of series connected circuits
in order that all the various tubes can have their
correct filament voltages obtained from a
25 volt power source.

Note that V508 and V701's filaments are in
series.

V508 is a type 5749 tube and is used in
the BFO oscillator circuit.

V701 is also a 5749 tube in the PTO oscillator.

Because both of these circuits effect the frequency
stability of the receiver, i.e. if the PTO or BFO
freq were to shift, then the received signal would
also appear to shift, it is important that the stability
of both of these two circuits are held to reasonable
tolerances.

The purpose of the 3TF7 ballast tube is to allow
the two 5749's to be powered off of the 25 volt
filament supply, AND also allow an amount of
filament current regulation. This is so that line
voltage jumps wont pull the frequency of these
two oscillator circuits.

New 3TF7's can be expensive I've seen them
advertized NEW for around $80.00 ea
several years ago.

Since one of the functions of the 3TF7 is to
act as a series dropping resistor to allow
12 volts @ 300 ma for the two 5749 filaments.
that are in series, I came up with a simple
replacement for this ballast tube:

move the wire on pin #2 of the 3TF7 socket
to Pin #4...

move the wire on pin#7 of the 3TF7 socket
to Pin #5.

Plug in either a 12BY7A , OR a 12BH7 tube
into the socket in place of the 3TF7.

Kind of wierd to have a tube with a cathode
grids and a plate in it only being used for
it's filament, but, hey it works and eliminates
the need for a rare and expensive ballast
tube. :-)

Bryan, from the "ATC-35" it looks like iy is a 35 mmf that can be used in an amplifier all the way down to 10 meters, that is not enough capacity.
Just a suggestion, either give the real capacity, or if it is only 35 mmf it is worth much less.

Pick up an cheap audio cable with an RCA connector from any source such as
Radio Shack. Cut off one end and split the two wires apart.
Plug it into the RCA antenna jack on the back of the SB102.
One wire will be your antenna and the other will function as a
ground or counterpoise. Seperate the two wires leaving a few feet
still together near the radio. This will make a sort of poor man's
dipole. The longer the better. Be sure to have a speaker (4 ohm) or phones
plugged in before turning it on. Do you have the HP-23 power supply
and the connecting cable? That should be enough to test the receiver
part. Do not try to transmit without a better antenna (and a ham licence).
Or use a dummy load. Good luck.

I've got the Viking II manual. Can give you a xerox copy of it if you care to send me a SASE. Won't part with the manual though because I still have my Viking II that I got in 1961 and need the manual. But a copy is yours for the asking.

The ART 13 modulation transformer is good for about 1900 VDC after
that it will break down. Some of the old AM guy's use to mount the
modulation transformer on ceramic stand-offs and put 2200 VDC to the
B+. I run about 1450 VDC on the B+ of my ART 13 and get about 150
Watts out and a good signal.

Hope this helps ......KF9CM

It is better to install a Low Pass Filter before you meet
and talk with neighbors about your ham radio.
Designed / Built By JR KB5MER
6 Meter Low Pass Filter Models:
Model#1 Harmonic down 38 dB @ 75 MHZ
52 dB @ 100 MHz
58 dB @ 120 MHz
Handles up to 250 watts PEP $39.00
Model #2 Harmonic down 68 dB through 900 MHz.
Handles up to 2 KW PEP $60.00
* Insertion loss less than one ( 1 ) dB
*All part as built to with stand a 4 to 1 SWR
*All test were made into 50 ohm load
* Test made by Austin Radio Lab
Price plus $5.00 shipping & handling Con US.

Source record: 111941

The Gibson Girl emergency transmitter is a WW2 vintage transmitter. To operate the transmitter, you let out the built-in antenna on a fishing reel, cradle the xmitter between your legs and rotate the internal generator. Sends an automatic SOS or use the built in key to send your own message. In good physical and operating condition. With canvas case and parachute! $150 plus UPS from 11740

I have several Lafayette boat anchors.
To all other owners.
A. The noise reducing cap across the primary of the transformer will
soon POP, if it hasn't already. It will throw tinfoil all over.
Take it out and forget it.
B. All the 250, 400 volt caps are leaky.
C. Spray the controls with DeOxit.

After this, it will probably work great. Very solid as well. They were
built by Trio.
....Dave

I have heard a few guys using these on the air on 7290, 3880 and 3885
kHz at night. They do sound loud, BUT you get that narrow "military
audio" unless you modify the MOD section for more lows and highs.

Take a listen to the AM frequencies, you will eventually hear one I am
sure!

For more details about military radios being used on the ham bands,

Use a sigjnal tracer and see where the racket is starting.

I doubt that the mod xfmr is bad.

You probably have some capacitors that need replacing.

In any xmitter that old, it is usually a good idea to go through an
replace all of the caps anyway!

I have the following Radio, and electronic equipment for sale. Reasonable offers or trades High End computer EQ. will be considered. All working last time tested unless noted.
Thanks

• Kenwood TS-820S - Digital Ham Transceiver 160-10 meters. Looks good and works well. Comes with hand mic and SSB filter installed. $400

• Tempo-1- Tube type Ham Transceiver/with Power Supply 80-10 meters. Looks good and works well. 100W output. $225

• Siltronix 1011C- 10 meter and CB AM or SSB Transceiver. Looks good and works well. 250-300W PEP output on SSB. $200.

• Motorola VHF Transceiver All tube Model: PA8270J SER.NO: 8697. It receives on 150.750 & 150.570 and transmits on 160.025. There is also a tone Signal and intercom control on front below speaker. This is the type transceiver that was used by police and fire dispatchers in the past.
Don't know if it works.(Make Offer)

• Grubndig Model 2066 AM/FM/SW all tube receiver. Nice wood cabinet.
It isn't working. (Make Offer)

• Heathkit HW 101, 80-10 meter transceiver. No Power supply. It is receiving, but don't know about transmit. Not able to test. Looks are 7/10. As is $100.

• Siltronix VFO Model 80. $75

• National Two/Seventy Ham Receiver with 6 Meter band. All Tube with matching speaker $225.

• Hallicrafters Model S-108 SW Receiver with a calb. Ham band spread. Looks good works well.$125

• Pearce Simpson, Guardian 23- All tube CB Transceiver/with mobil power cord and mounting bracket. Looks and works Good. $125

• Traynor, Group Two B- Audio Amp Head. High/ Low mic. in puts. Master volume, volume, bass, treble and tone shaper controls. $150

• Pro 62 - like new. Purchased 5-6 months ago. Still under warranty. Have original sales receipt box manual etc. It is triple conversion Hyperscan 200 channel scan covers from 30-960 MHz. $150+ shipping.

• Channel Master- Tube Stereo Receiver (Model 6612) and matching amp (Model 6601) Looks good and plays on FM. AM not working. $150

• Sams CB Photofact- Several volumes, some continuos: numbers as follow: Continuos 1- 55 and 57- 65. Individual 70,72,80,88,93,98,104,120,122,128 178,190,226. Also have some two of same number. $4 each.

• AR Inc.- Stereo Amp, all solid state. $125

• Yashica Eletro 35- 35MM Camera with Telephoto 1:4 , Wide Angle 1:4 and Tele-wide finder lense. $100.

>Bill Evans VE4UD

Bill, why not just e-mail him?

I think his number is also listed with the e-mail address at:

http://www.mnsinc.com/bry/mega/boatanch.htm

and

http://www.mnsinc.com/bry/hamlynx/hamboata.htm

(not sure about the phone number)
My guess is that it's a part time thing for Barry and he probably
doesn't want a lot of phone calls about ER matters.

>Peter
>Peter Bertini K1ZJH

Sorry Peter, but I have to agree with Chuck. $27 seems high for a
meter. Not TERRIBLY high, but a little high nonetheless.

Considering I have bought a number of complete BA RIGS for less than
that, it seems high!

Then again, I also thought $275 for a Ranger was absurd too!

I have seen guys unable to unload a Valiant for less than that!

Of course, what this all comes down to is our own opinions and
experiences. The guys with deep pockets often don't think something
is too high a price if that is what it takes to keep a poor boy from
getting it!
(grin!)

ANother new e-mail address, Dave??!

Gee I can't keep up with you!

As to the bottom plate, well, you could always make one.

It would be quite easy. I have done that for other BA gear
where the previous owner was the nutty professor/forgetful type,
that had lost the bottom plate (along with his marbles and everything
else!)

Dave there are still a number of good sources for these.
One of the most active (and least expensive) is John Morris N0ACS
at CW Crystals.

His information, along with dozens of other suppliers, is available to
you at:

http://www.mnsinc.com/bry/mega/xtals.htm

I hope that's helpful!

Bob, why not just feed the output to a good quality tube audio
amplifier?? Wouldn't that do it?

Or is it much worse sounding than I think?

My old friend N4IBF who is a silent key, used to run his
R-390A audio out to a nice tube amp and it sounded pretty decent!

## 566. HW-101 debug/help

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-01-11 00:00:00 UTC
From: ddouglas <w5tn@jumpnet.com>
Message-ID: <69at4r$jm3$1@news.jumpnet.com>
Source record: 111830

I have a hw-101 that I'm trying to bring up and I'm having some problems with it.

1) The output on 40 meters is about 40 watts, while all other bands have the output in the 80-95 watt range.

2) When the CW crystal filter is enabled, the output drops by 20 watts. When the filter is disabled again, the output goes back up. This happens on every band.

notes:
The bias voltage (as read from the hw-101 meter) is low during transmit, about 200 ma. If I raise the bias voltage while transmitting on 40 meters, the output goes up to 80 watts or so. This leaves the idle bias voltage too high (way above 50ma).

On page 117 of the manual there are some 'initial tests'. I get some different values for Point 5 and Point 4. Point 5 says the voltage sould be +275 vdc. I get 318 vdc. Point 4 says the bias voltage at that pooint should be -108. I get -82v.

Any help would be appreciated,

Thanks,
David

## 567. FS Temp AC/One Speaker and PS

Also - the rig has 6146A's in it. I don't think that that should matter.
Another item, Whe I transmit, the output drops about 10w after the initial
key-down. Maybe gassy 6146's ??

From: kb0upl@aol.com
Message-ID: <19980111013701.UAA19610@ladder02.news.aol.com>
Source record: 111914

I have for sale a Collins R-391 and a Motorola R-390
The Collins R-391 is in very good cond. on the outside but it is dirty on the inside.
It will cleen up pretty easy. The frount panel is in very good cond. the set has orig.
meters and top and bottom covers. It workes OK. The set is missing the orig. channel lock keys for MC and KC but I am includeing keys from a collins ARR-15 that look the same and can be modified to work. I am asking $475.00 for this set plus shipping.
The Motorola R-390 is also in good cond. The frount pannel is very good and the set works fine it is missing the meters and the top and bottom covers. I am asking $275.00 for this set plus shipping.
I am also interisted in trades. I am looking for Navy ship radios, Navy ship clocks, Navy manuals ext.
Thanks and 73's John Richardson kb0upl

The 1A was Drake's introduction into the receiver markert in 1957. It covered the 10-80 meter bands and had unusual styling in that it was deeper than it was wide or tall, more like a mailbox than a receiver, but it was a good performer. The next model, the 2A, was a super SSB receiver and both receivers broke with the tradition that equipment had to be big and heavy to be good. They were small and lightweight. Wish I still had mine.

## 601. ART13 mod xfrmr info????

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-01-12 00:00:00 UTC

I have a homebrew 813 deck modulated with a pair of 811A's. It uses an ART13 modulation transformer and I was wondering what the maximum audio power that can be made with this transformer and keep it reliable. It seems kind of small and I dont want to burn it up. Anyone out there with any experience with these? Especially someone who put one to the limit ! Any info would be very helpful.
Thanks,
Jim

# 624. FS: HAMMARLUND HQ-180A $200

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-01-12 00:00:00 UTC
From: wb9gkz@aol.com
Message-ID: <19980112032000.WAA22262@ladder01.news.aol.com>
Source record: 111860

I am selling my HQ-180A. Bought it this last summer with hopes of restoring
it to its original glory. I have grown tired of working on it and have decided
to
let some other poor hobbyist finish where I left off.

SUMMARY OF CONDITION:
The front panel is "ugly". Previous owner touched up grey with brush and
then "buffed" the panel. Too bad he buffed off the "MAIN TUNING" lettering
also. All other lettering is intact. Knobs all orginal and non-chipped.
S-Meter is "brown" (not white). Cabinet has usual scratches and looks
to be in good shape (no deep gouges). Top of chassis is average...needs
cleaning (supply your own toothbrush)...bottom of chassis is very clean
(all the grime ended up on top). Dials are clean...all numbering very intact
and clean. Performance on all bands is very good...I did a quick alignment
on the RF through IF...all fell into place per the book.

WHY AM I SELLING IT: Well, I find the front panel offensively ugly. I'm
not a pro with an airbrush...if you are, you may have something here.
Also, I find myself spoiled with the audio quality of my Drake R-8A...
can't live with the 3-4 KHz IF response of the HQ-180A on AM.

So, won't you buy my ugly looking but operational HQ-180A? Buyer pays
shipping and packing. Price: $200.oo

Source record: 111865

AN/URM-27 signal generator (New London Instruments, 1951).
18-110 Mhz FM, real stable. Calibrated attenuator - 0.1uV to 100 mV O/P, Int
1Khz or ext modulation.This unit has a ferrite modulator and silver-plated
casting for the osc. assembly + standard tube lineup. Works perfectly, ideal
for FM LB/broadcast rcvr work, pristine inside but case could use paint as it's
well scuffed.

$95.00 + shipping

Chris

## 636. FS: BC-375 Transmitter Antenna Tuners

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-01-13 00:00:00 UTC
From: Mark Gaidos <mgaidos@wv.mentorg.com>
Message-ID: <34BBE021.6521@wv.mentorg.com>
Source record: 111674
Cross-posted to: rec.radio.swap,rec.radio.amateur.equipment,rec.radio.amateur.boatanchors

I have several BC-375 Transmitter antenna tuners for sale as
follows:

TU-7B - 4500 KC -> 6200 KC (w/ transport case)
TU-10B - 10000 KC -> 12500 KC (w/ transport case)
TU-26B - 200 KC -> 500 KC (w/ transport case)
TU-8B - 6200 KC -> 7200 KC (parts only)

These units could be modified for various uses, or the
heavy-duty RF parts and dial drives could be used to homebrew
a tuner. All have black wrinkle finish.

I'm asking $40 for all of them, but at this price,they
must be picked up locally in the Portland, Oregon area.

Mark Gaidos

## 637. WTB: Knight-kit SpanMaster II

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-01-13 00:00:00 UTC
From: nick@cs.unc.edu
Message-ID: <69gr25$bju@altair.cs.unc.edu>
Source record: 111675

I'm looking for a Knight-kit SpanMaster II. This is the 1970 version
with a single vernier dial, superhet with BFO. Black & aluminum front
panel in a gray crackle cabinet. 4 bands, 4 tubes plus rectifier.

See 1970 Allied Radio catalog page 496 -
It seems similar to the Hallicrafters S-119 SkyBuddy II.

Will pay cash or trade vintage gear. If you come across one at
a hamfest please keep me in mind.

I haven't ever seen one of these Japanese Knight-kits - has anyone
got one ??

Unfortunately I don't have my Shure Bros. smarts handy, but IIRC, the 444 mic is a controlled magnetic transducer, and I don't *think* the impedeance isn't too high...perhaps 500 ohm. I'll followup w/ another post once I've dug up some info.

From: "Dr. Stephen Andrew Wilson" <drwilson@queretaro.podernet.com.mx>
Message-ID: <01bd202f$c2a09ee0$LocalHost@drwilson>
Source record: 111687

Dear friends,

I have had to sell out my ham station to get my house finnished. All I have left doesn't work. :-)

I am in urgent need of all scematics and manuals for the following equipment. Will reimburse for photocopy/mailing charges. Or else info on where I can buy these manuals.

-R-26/ARC-5 3-6 Mhz receiver. (World War II)
-ART-13 Transmitter (World War II) Also, can it be made to cover 1.8-29??
-Redicom XF742, by KEA UHF 25-watt tranciever. (Have 2 of these.)
-Yaesu FTC-4625 UHF Tranciever
-Aerotron FM tranceiver.
-GE ET34-C
-GE ER-31-C
-RCA "El Dorado" Carfone FC15-S2U-S (I have 5 of these!)
-Motorola MD33CMT-1100BM
-Motorola HT440 handie. Contrary to what the 440 would imply, it is on 150 Mhz.
-Tempo VHF/One-R 2-meter mobile with SSB-One converter for sideband. I sent
Tempo $5.00 for a scematic and received an unreadable one. They said that was
all they could offer.

Thanks to all for your help.

## 651. NCX-3

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-01-13 00:00:00 UTC
From: n3ab@fast.net
Message-ID: <34bec456.694435@news.fast.net>
Source record: 111789

I have a National NCX-3 with power supply that's sitting here collecting dust. I bought it off a local ham friend and I have yet to use it. He had it on the air so as far as I know, it's working OK. The set and supply look decent. No manual. I paid $150.00 for it, so if I break even and something can be worked out with shipping, that would be great. Please drop me an e-mail if you're interested. Thanks!

John N3AB

Source record: 111790
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.swap

I would like to trade a nice 51J-4 and 48 feet of used Rohn 25G for a 30L-1. Must be operational and cosmetically excellent, especially the front panel. You make the arrangements for the tower pick up at my QTH in San Diego.

Lane

# 657. "ENIGMA" BOOK about Bletchley Park

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-01-13 00:00:00 UTC
From: radiomatt@aol.com
Message-ID: <19980113043401.XAA27665@ladder01.news.aol.com>
Source record: 111795

I don't know if anyone mentioned it before, but Robert Harris' book "ENIGMA", although a work of fiction, has some apparently very accurate descriptions of Bletchley Park, the super-secret Brit NSA-type operation of the early 1940s. There's also a description of a cliff-top intercept site at Scarborough, with a desription of the antennas ".. Rhombic and Beverage configurations....dipoles and quadrahedrons.."

Later ..."we have three types of sets...HROs, Hallicrafter 28 Skyriders and American AR-88s. Each girl has her own frequencies to patrol, though we'll double back if things get busy."
"How many people d'you have working here?" asked Hester.
"Couple of thousand."
(I wonder if any of the "girls" became SWLs or Hams?)

You'll have to read the book for more.I bought it, but a library card is cheaper.

It's a mystery about a spy in Bletchley. Pretty good and a nice diagram of the ENIGMA MACHINE inside both covers.
Gives actual frequencies and some 4 and 5 letter groups, too.

First, Steve, the term "boatanchor" is not applied, here, in its usual sense -- that of serving no more purpose than such. For us, "boatanchor" refers to, usually, older model gear built with heavy components (particularly power transformers) and "weighing as much as a boat anchor." That said, I wouldn't consider a GSB-201 as "something to dump in the lake" -- assuming it was working or restorable! ;-) When I was a member of the radio club at USNAVRADSTA(T), Fort Allen, PR, we had a GSB-201 and had few problems with it and worked 20-meter phone DX with ease.

Shipping (in the continental US) for the following books is:

$3.50 for the first book,
$1.50 per additional book

Thanks,

- Jeff, WA6AHL

ENGINEERING ELECTRONICS, John Ryder, McGraw-Hill, 1957.
Covers worn & much penciled annotation inside. However, great
book for general tube-type design (includes Class C amps).
$12.50

RADIO ENGINEERING, Frederick Terman, McGraw-Hill, 3rd edition,
1947. Spine worn & soft, otherwise good condition. One of Terman's
classic books. $17.50

SOLID-STATE POWER CIRCUITS, RCA Designer's Handbook SP-52.
A much more detailed hardbound version of RCA's softcover
handbook - 696 pages of design information (this is *not* a
device data book). $12.50

ELECTRONIC PRINCIPLES, Physics, Models, and Circuits. Gray
and Searle, Wiley, 1969. Excellent textbook for solid-state
design by two MIT professors. Cover quite worn, though, and
seperating from spine (can be repaired). Annotated inside.
$6.00

DESIGN OF AMPLIFIERS AND OSCILLATORS BY THE S-PARAMETER METHOD.
George Vendelin, Wiley, 1982. Very good condition. $17.50

PRINCIPLES OF FEEDBACK DESIGN, Edwin and Roddam, Hayden, 1964.
Good book discussing & analyzing feedback and its effect on
distortion, stability, etc. $10.00

MICROWAVE THEORY AND TECHNIQUES, Reich, Ordung, Krauss, Skalnik.
Van Nostrand, 1953. Good condition textbook by excellent authors.
909 pages. $20.00

ELECTRIC CIRCUITS, Nilsson, Addison-Wesley, 2nd edition, 1987.
Good textbook dealing with standard circuit theory (time-domain
analysis, then on to Laplace and Fourier). Very good condition
but for the cover, which is beginning to seperate from the spine.
$6.00

ELECTRONIC MEASUREMENTS, Terman & Pettit, McGraw-Hill, 1952.
Excellent condition textbook, dealing with measurement fundamentals
in numerous fields including radio and microwaves.
$17.50

ANALYSIS OF AC CIRCUITS, Lapage, McGraw-Hill, 1952. Another in the
McGraw-Hill classic "black cover" series. Good condition, with some
wear on spine. Well written. $10.00

MAGNETIC CIRCUITS AND TRANSFORMERS, EE Staff of MIT, John Wieley, 1943.
Good condition with some wear on edges. Excellent textbook on, well,
magnetic circuits and transformers. $17.50

MATHEMATICAL ELEMENTS FOR COMPUTER GRAPHICS, Rogers & Adams, McGraw-Hill,
1976, Softbound. Admittedly an obscure topic, but one of the few books I
found really useful when I was trying to get a handle on Bezier curves and
B-splines for work. $5.00

FREQUENCY MODULATION, by John Rider, Rider, 1940. Hardbound
book explaining the basics of FM. With dustjacket. $7.00

FUNCTIONAL CIRCUITS AND OSCILLATORS, Reich, Boston Technical Publishers,
1965 (although copyrighted 1961). Excellent condition book dealing with
various tube circuits (primarily multivibrators & oscillators)
by an excellent author. 466 pages, hardbound. $20.00

PULSE, DIGITAL AND SWITCHING WAVEFORMS, Millman and Taub, McGraw-Hill, 1965.
Softcover version of a classic textbook. Very good condition. $9.00

RADIO HANDBOOK, Editors & Engineers, 13th Edition, 1951. Some wear on edges
and covers. Edges of pages yellowing (why did they use cheap paper?) $15.00

THE RADIO AMATEUR'S HANDBOOK, ARRL, 1969. Cover could use some cleaning, but
otherwise pretty good condition. $10.00

THE RADIO AMATEUR'S HANDBOOK, ARRL, 1970. Cover worn and some creases. $10.00

THE RADIO AMATEUR'S HANDBOOK, ARRL, 1972. Pretty good condition, but some
large creases on the back cover. Pages yellowing (a common problem with the
70's editions of these books). $9.00

THE RADIO AMATEUR'S HANDBOOK, ARRL, 1974. Some creases on coverr. Pages
yellowing (a common problem with the 70's editions of these books). $8.00

A COURSE IN RADIO FUNDAMENTALS, ARRL, 1972. Excellent condition, by George
Grammer. $5.00

CQ ANTHOLOGY, The best of CQ 1945-1952. Softcover, very good condition.
$10.00

HINTS AND KINKS, ARRL, VOL. Six, 1959. Some tearing of cover at spine and
a bit of fading in the red color. $6.00

COMMUNICATIONS RECEIVERS, Raymond Moore, 3rd edition, 1993. Moore's excellent
guide to receivers of the vacuum tube era. $9.00.

RADIO RECEIVERS, Department of the Air Force, 1956. Manual 100-5 dealing with the basic radio theory of receivers (tubes, of course!). $10.00

ELECTRICAL FUNDAMENTALS (ALTERNATING CURRENT), Department of the Army, 1951, TM 11-681. A good basic theory book. $3.00

FM TRANSMITTERS AND RECEIVERS, Department of the Army, 1952, TM 11-668. Good basic theory book on FM. Some black paint on the upper corner of the front cover (overspray from spraypainting?). $4.00

ELECTRICAL COMMUNICATIONS SYSTEMS ENGINEERING HANDBOOK, Department of the Army, 1956. TM 11-486-10. Essentially a handbook with lots of information (conversion factors, wire gages, lots of tables, etc.), $5.00

HEWLETT-PACKARD APPLICATIONS NOTES. Applications notes, both recent and old (including Application Note 1, 2, and others). At least 30 of them (they're duplicates of others that I have). Topics also include the fundamentals of signal analysis, quartz oscillators, spectrum analysis... $4.00

I third this -- try braided fishing line of the appropriate pound test that matches the diameter of the original dial cord. That's probably going to be the easiest to find. The "woven" cord will probably be best in terms of non-slippage on pulleys and such.

You can still get spools of dial cord from GC Electronics (I think that they have two diameters), but you'd have to be close to a better electronic parts store to find it. Should also be able to mail order it from Antique Electronic Supply in Tempe, AZ.

> audio power that can be made with this transformer --snip--

Here are the specs on the ART-13 mod xmfr Collins 677-0002-00 designed
in 1944 and last revision dated in 1954:
50 watts audio max. Response: 300Hz @-2 Db, 1000Hz 0Db, 4000Hz -2 Db
terms 1-3 15000 ohms, 4250v test voltage, current 150 ma balanced
term 2 ct
terms 4-5 7300 ohms, 4250v test voltage, current 1-150 ma unbalanced
terms 6-7 970 ohms, 2500 test voltage, current 2-10 ma unbalanced

I know that many have used this great old xmfr well beyond the above
ratings--but, this is what the spec says.

Have fun, 73, Bill W0BVR

## 681. Hallicrafters S-38 ("Canoe" Anchor?)

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-01-13 00:00:00 UTC
From: "Christopher A. King" <cking4@ford.com>
Message-ID: <34BBD321.5AEE@ford.com>
Source record: 111819

As I have lately been in the process of hunting down a Hallicrafters S-38 (to replace the one I foolishly sold about eight years ago), it seems as though these were produced in more than one cabinet finish.

The one I originally had was olive green in colour, yet the majority of those I have seen available (and even the one illustrated in the Dachis book) have a smooth black finish. Apparently the original S-38 was even produced with a black "wrinkle" finish, much like the S-38B. I did locate another olive green S-38, and I own it now, but the exterior condition is not really acceptable to me, so I'm still searching for one. I can probably live with the black finish, but an olive green one would truly replace the first one I had several years ago.

Does anyone else out there -- even if they do not want to sell it -- have an olive green one in their collection...? Does anyone know which colour was produced first, or in which order the different finish colours were offered? I'm just trying to get a feel for the relative abundance or scarcity of each type. Thanks in advance for any responses...

C.K.

## 683. synching a 2-C and 2-NT

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-01-13 00:00:00 UTC
From: Casey Bahr <NOSPAMcasey@foreign-interests.com>
Message-ID: <34BBCE32.4A0F@foreign-interests.com>
Source record: 111821

My 2-NT has a "spot" function for allowing one to tune a
companion rcvr (in this case a 2-C) to the freq of the transmitter.
However, the manual is a bit vaque on exactly where to tune the rcvr.

To me the manual implies that I should tune to the tone I'd expect
others to receive at. This is of course a bit subjective. Someone else
told me to zero beat the rcvr on the 2-NT spotting output.

I'd be glad to hear from someone who knows just how this is really
supposed to be done.

tnx es 73,

Hello Casey,

In this situation the manual is right. The 2-NT is CW only, so I'm assuming you're using CW, either with crystals or an external VFO.
Here's a more exact explanation:

First, let's assume you're using crystals. The transmitter frequency is set entirely by the crystal, so the problem boils down to listening to the exact frequency that you're transmitting on. The spot switch turns on the oscillator in the transmitter, which you can then hear in the receiver. You tune the receiver for the tone that YOU like to listen to for code reception. That way, if somebody replies on or very near your transmitting frequency, the receiver is set correctly.

Second, let's assume you're using a VFO. Then the problem is usually reversed - setting the transmitter to match the receiver. Typically you first tune the receiver to the frequency you want, then tune the VFO to the tone you use for reception.

Yes, it's subjective, and it takes practice to get it right. It helps to use the sharpest selectivity position on the receiver (.5 kHz on a 2-C, I believe). "Zero beating" (tuning for a very low or "zero" tone) is used when setting VFO frequency with the BFO off - AM, for example.

If this still isn't clear, feel free to email me for more info.

Is it any wonder that transceivers became so popular?

73 de Jim, N2EY

# 692. F.S. TMC Model DVM Diversity Visual Monitor

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-01-14 00:00:00 UTC
From: Walt Novinger <wnovinger@shaw.wave.ca>
Message-ID: <zMTu.3$yP6.352603@kidd>
Source record: 111696
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.amateur.swap,rec.radio.swap

Posting for a friend who doesn't have net access. This is a rackmount monitor, apparently used to monitor signals from two receivers used in diversity mode. 3" CRT display and many controls. The unit is in fair cosmetic condition, and had apparently had several mods made at one time or another. Untested. US$125 OBO + shipping.

Hint on Atlases -- first clean the relay contacts.

Next replace the nasty IC clips with machine-pin IC sockets.

This cures about 70% of dead Atlases, I'm told.

Shure Model S-36 Microphone Stand. Grey Smooth Paint...with Round
Shure Button Logo on front. This is another Cool lookin' 50's
Nostalgia/Art Deco type piece. This Base looks like a Cross between
the Front end of a 1950's Bumper Car and a Flash Gordon Space
Helmet.!!! Tear Drop Shaped with a Very High Front and a Grey Metal
Mic Stem. Would look great with a Neat 50's Chrome Mic strapped on to
her!!

VG Condition....7 Out of 10.....a Repaint would bring it up to 9++

PRICE..........$25.00 USA
##########################################################################################################
Microphone Stand. Metal Cast Base (Round Shaped)....painted Black
Wrinkle. With Long Chrome Mic Stem that screws into the center of the
base. Very Heavy Base.......
Bottom of Mic Base says...Made in Taiwan..moulded into the Base.

VG+ Condition ....8 out of 10.

PRICE..........$10.00 USA
##########################################################################################################

That's it for now.......73...ROB.

## 696. Viking Ranger (and other stuff) to Swap...

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-01-14 00:00:00 UTC
From: Don Whitty <whittyd@nbnet.nb.ca>
Message-ID: <01bd2096$56f32340$0c04a4c6@whittyd.nbnet.nb.ca>
Source record: 111700

My station is slowly and decidely becoming Collins (2 S-lines, 51S1, 30L1, 75A2(A)/32V2, etc...)

I have quite a bit of other stuff and I am interested in trading for some more Collins gear.....as those
who manage in the 90's say..... "get focused".

I have a real pretty Viking Ranger I, (with the TimTron mods) and a HRO-60 combination that I use
almost daily, that I would be willing to part out. (Also have a Viking II and a Valiant). The Valiant is
used with a SP-600 and Viking II with a beautiful (and I mean beautiful) HQ-180A. I am interested
in swapping for Collins stuff. I am interested in A line, S line and could really use a nice KWM-2....(A)??

Anyway...

If you have Collins and your "focus" includes Johnson or National......
Drop me a note and let's see
what we can do.

Don Whitty

>--
>Thanks & 73, DavidC AA1FA

David: I don't have the manual, but I have one of these neat devices sitting here in front of me. Its on my list of projects I'd like to get to someday. I made an effort to get a manual or schematic some time ago by writing to Palomar Engineers. They told me that they weren't the same "Palomar" company that made this device.

If you have any luck, I'd appreciate a copy of the schematic.

I have the following Radio, and electronic equipment for sale. Reasonable offers or trades for radio and High End computer EQ. will be considered. All working last time tested unless noted. Shipping is extra.
Thanks

• Kenwood TS-820S - Digital Ham Transceiver 160-10 meters. Looks good and works well. Comes with hand mic and SSB filter installed. $400

• Tempo-1- Tube type Ham Transceiver/with Power Supply 80-10 meters. Looks good and works well. 100W output. $200

• Siltronix 1011C- 10 meter and CB AM or SSB Transceiver. Looks good and works well. 250-300W PEP output on SSB. $200.

• Motorola VHF Transceiver All tube Model: PA8270J SER.NO: 8697. It receives on 150.750 & 150.570 and transmits on 160.025. There is also a tone Signal and intercom control on front below speaker. This is the type transceiver that was used by police and fire dispatchers in the past.
Don't know if it works. $80

• Grubndig Model 2066 AM/FM/SW all tube receiver. Nice wood cabinet.
It isn't working. $75

• Heathkit HW 101, 80-10 meter transceiver. No Power supply. It is receiving, but don't know about transmit. Not able to test. Looks are 7/10. As is $100.

• Siltronix VFO Model 80. $75

• National Two/Seventy Ham Receiver with 6 Meter band. All Tube with matching speaker $225.

• National NC 188 Receiver. It looks good and all together, but not receiving.
On looks I would say 7/10. $60

• Hallicrafters Model S-108 SW Receiver with a calb. Ham band spread. Looks good works well.$100

• MFJ Rtty/CW Computer Interface Model MFJ-1224, used for copying code from the radio to your computer. $50

• Pearce Simpson, Guardian 23- All tube CB Transceiver/with mobil power cord and mounting bracket. Looks and works Good. $125

• Traynor, Group Two B- Audio Amp Head. High/ Low mic. in puts. Master volume, volume, bass, treble and tone shaper controls. $150

• Pro 62 - like new. Purchased 5-6 months ago. Still under warranty. Have original sales receipt box manual etc. It is triple conversion Hyperscan 200

channel scan covers from 30-960 MHz. $125.

• Channel Master- Tube Stereo Receiver (Model 6612) and matching amp (Model 6601) Looks good and plays on FM. AM not working. $150

• Sams CB Photofact- Several volumes, some continuos: numbers as follow: Continuos 1- 55 and 57- 65. Individual 70,72,80,88,93,98,104,120,122,128 178,190,226. Also have some two of same number. $4 each. Special discount price for all.

• AR Inc.- Stereo Amp, all solid state. $125

• Yashica Eletro 35- 35MM Camera with Telephoto 1:4 , Wide Angle 1:4 ,Tele-wide finder lense and flash attachment. $100.

# 701. FS Hammarlund HQ-180C-Restoreable

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-01-14 00:00:00 UTC
From: jimru146@aol.com
Message-ID: <19980114130901.IAA17346@ladder01.news.aol.com>
Source record: 111705

Hello CQ, de Jim N1MAA.
I made a big mistake listing three "restoreable receivers" all at once with not enough detail on condition. Had tons of replys I could not keep track of. So I will try again.
FS Hammarlund HQ-180 C.
This radio is for sale because I do not have the time to devote to restoration. Front panel is very good to excellent, no major scratches, and is nice and bright. Dials, s meter and clock all in very good condition. Chassis is clean. For these reasons I consider it a great restoration project.
The radio receives but is not right. Has some audio distortion an lower bands, and last two bands are dead. I have not checked this radio out, all I have done is bench tested it. Could be as simple as tubes, alignment ect.
Cabinet is good overall, no dents but it had some rust, so it needs a repaint.
No manual is included, but I might be able to get a copy.
The price is $125 plus UPS.
At the risk of being rude, no tire kickers please. I simply do not have the time to respond to 20 or 30 e-mails about nit picking details.
At $125 it is a great deal for someone who has the time and a little radio knowledge.
Tnx es 73 Jim

Body handling: Binary attachment payload not displayed: vcard.vcf

Hi, probably looking for a needle in a haystack here, but I recently
aquired a set of 599D twins and need some help. Seems the transmitter
doesn't want to work.... funny thing is, I have located two more sets of
radios locally, and those transmitters don't work, either... the relays
kick and IP and HV voltage are there, the tubes are glowing, but no
dice. Same exact thing with others I found! Some bug in the radio??
seems to be a popular bug. the previous owner has had the radio 20 yrs
(in the closet) with the transmitter broken, so it apparantly broke very
early on.. what could be the problem?? Any help appreciated.
Would also be nice to have the 2m and 6m boards for the receiver,
too, if anyone has them around!
thanks,
Randy

# 708. Re: Shure 444 Impedance

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-01-14 00:00:00 UTC
From: W3BV <agray@voicenet.com>
Message-ID: <34BCE8FD.A62@voicenet.com>
Source record: 111712

According to Shure's data sheet, the 444 is a "High" impedence
microphone intended for connection to a high-impedance microphone input.
Load Impedance Range: Minimum 15,000 ohms; Recommended 100,000 ohms.

The 444D microphone, on the other hand, has both had and low impedance
(500) switch-selectable settings.

Alan, W3BV

The company I work for has a Motolola complete
rack panel "about 6' high" 1/4 kw low band base.
Now crystaled up for 37.54 mhz. The base is very
clean and in unmodified condition. It operates FM
and uses 254 finals which are the same as 100th
triodes. It is driven with a pair of 6146's
Has all factory meters and is in operating condition.
It can easily be setup on 6 or 10 meters and could
be used as an amplifier. It will run 1/4 kw continuous
duty and full kw moderate duty.Model # B61A5B.
Offers are being taken since we have no idea of it's
worth. Do not contact me for info. Contact Chuck at
below phone number for details. Pick up only.

Phone 800-788-2587 CMI ask for Chuck

No, there was a Drake 1-A. It was produced before the Drake 2A and
Drake 2B (of which I still have one) Rx in the 1960s(2A from about '60
till about '62 and the 2B from '63 to
'65 or maybe '66). I think the Drake 1 A was produced before 1960.

I have a Knight-kit Span Master , the basic description is the same ,
except it has two large dials, one for bandspread and the other is the
main tuning.
There is also a 4 position band switch, regeneration control, volume
control and fine regeneration control.
It has a black crackle cabinet, and has two tubes.
What year was this produced in ?

## 726. WTT: Dow-Key Coax relays

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-01-15 00:00:00 UTC
From: Doran Platt <jeepp@erols.com>
Message-ID: <34BEABE0.DAC29856@erols.com>
Source record: 111576
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.amatuer.swap

I have a new Dow-Key (Kilovac) DPST relay, SO-239 connectors, dual external contact set, 24 Vdc (not MIL surplus and new cost about $260). These are primarily used for transceiver to older amp that doesn't have an internal coax relay (remember a transceiver has to look at the amp in tx and the antenna in rx) or if you're building an amp. I want to trade this relay, even up, for a similar condition standard Dow-Key DK-60B with external contacts. I'm not too concerned with the coil voltage; most of them seem to be 110VAC. Thanks Jeep K3HVG

For Sale: NIB Collins TSC60V1 air cooled HF dummy load. 50 Ohm, in wall mounted cabinet with convection air vents bottom and top. HN connector which can be replaced with connector of choice. Unit consists of three (3) huge non-inductive carborundum (sp) resistors and associated mounting and shielding hardware in a rectangular case with wall mounting tabs. Approximately 8 inches square by about 30 inches long. Shipping weight about 30 lbs with original military packing. Estimate power handling capacity at 1500 watts plus with convection cooling, more if you want to blow it. Duty cycle unknown, but should handle most legal ham amplifiers with ease. This is not a VHF load!

$125 plus UPS on 30 lbs from zip 95827

Tnx for the read es 73

Bob, KE6F

wrote:

>Could someone please tell me how to wire an Astatic D-104 (non-amplified)
>to a Heathkit SB-102> The SB-102 has only two pins in the microphone
>connector.

Gary, I'm not sure about the 102 but if you have the schematic, you
can verify this. If it has PTT, most likely pin one will be audio
(white from mic), pin 2 will be ptt (red from mic), and ground (braid
from mic) folded back and placed between the spring and the connecter.
The screw on the back of the connector will press the braid between
the spring and connector.

The pain thing you have to verify from the schematic is that pin 1 is
audio. They are wierd connectors and for someone used to dealing with
4 and 8 pin connectors the main difference is how the braid is dealt
with.

Hope this helps....

Paul

I have for sale a Radio Test Set AN/PRM-1A in very good cond.
The test set has two Cases and a 3' loop ant. The first case CY-749/PRM-1
holdes the Radio Interference Field Intensity Meter. IM-37A. This unit covers
150kc-25mc The receiver workes very well it can be used with batterys or the
115vac power supply that comes with the unit.The second case CY-759/PRM1
containes the PP-472B power supply many cables and adapters for the set. Also a
ME-33U Ammeter and local antenna and sensor antenna. Also included is the 3' DF
loop ant for the unit. I checked this out and It works great. I would love to
keep it for myself but I have To much stuff. I am asking $300.00 for this set
or I would like to trade for other navy ship radios ships clocks navy manuals
ext.

Them ain't antenna tuners; them's oscillator tuners.
The BC-375 antenna tuner is the Vario in the big black
box with 2 beehive insulators on it.

them TU's can be made into antenna tuners, tho, and will handle
considerable power.
I got several, but I want $75 EACH for mine, and won't ship them.

Have a nice day.

## 743. TId-bits For Trade

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-01-15 00:00:00 UTC
From: w5jv@juno.COM
Message-ID: <19980114.221834.9902.2.w5jv@juno.com>
Source record: 111736

(1) Trade: Knight Kit assembly and operations manual for Electronic VTVM 83Y125 (classic). Copyright 1956; excellent condition. Last page has pictures and specs on their RF sweep generator and audio generator. Will exchange for one NOS 12BY7 or 12BY7A.

(2) Trade: Editor's & Engineer's FM Repeater Handbook, 1969; as new, hardbound version. Covers tube era repeating & remote controls. Trade for FT243 xtals in ham band (HF) or two NOS receiving tubes.

(3) Free to Good Home: Lafayette Electronics schematic for their famous little battery powered push pull audio booster. Just send S.A.S.E.

(4) Almost free to Good Home: Cheap Japanese telegraph key cast to look like expensive American variety. Ball bearing pinion mounts. Trade for one NOS 12BY7 or 12BY7A.

## 744. WTB-SSB Slicer

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-01-15 00:00:00 UTC

Yes, folks, here's another chance to get a classic Astatic D-104
mike.

Grey base with chrome push-to-talk bar. No label on base, some
rubbing. Good black felt on bottom, looks worn but covers well.
Mike head looks good, couple scratches on back. Label on top.
Cable cut clean, separate four-pin mike plug if you need it.

All yours for a whopping $45. How 'bout that!

Tnx and 73, Bob

From: Dennis Gibbs <dgibbs@rational.com>
Message-ID: <34BE2FA4.1B8E@rational.com>
Source record: 111756

Greetings all,

I've heard very favorable comments in the past about the quality of Rick Mish's work. I am considering having him overhaul my R-389. Has anyone had any recent dealings with Rick?
If you've had him do work on your R-389, I'd be especially interested in what was done, and how much the work costs. I know it's expensive, but I'm trying to get a rough idea about the experiences of others before I call Rick.

Thanks,

Dennis Gibbs

Source record: 111761

Heathkit SB-230 forsale:

It is in perfect operating condition and looks near perfect.
I also have two spare tubes one of which has been tested other is not
guaranted.
I have heard they are a pain to install.
This is a Kilowatt amp with Ten-Tec styled face.
VERY QUIET, Near silent if relay noise is not considered in tx/rx change.
I am not sure what value to put on it at this point?
Please consider spare tubes a increased value as new tubes are over 600$.
Oh! This Amp is a 10 to 80 meter design for you 160 meter nuts.

DOes anyone know Heathkits matching tranceiver line for the SB-230?
If no one wants Amp I would be interested in Matching setup.
Please make a common sense offer if truly interested.

## 775. Re: Kenwood 599D Twins: HELP!

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-01-15 00:00:00 UTC
From: jfredthoms@aol.com
Message-ID: <19980115205700.PAA26201@ladder03.news.aol.com>
Source record: 111768

YES, have a pair of 599d, with an extra transmitter. Excellent receiver, and ok transmitter but, very difficult to tune up, if tubes all test good, follow instructions in manual, but probably will need to go to cw position to tune, tune will not work on mine either.

First thing to check is the interconnecting cable, at both ends. Cable is notorius for breaking some wires. If or when you get it going, you will get always good reports on strength and quality. These radios were ahead of their time. Not many radios in 70s with am sb and fm.

Used mine with the 6m converter one year, had a ball.
try this and let me know.KI4YL, fRED tHOMAS

# 776. Re: WTB: Knight-kit SpanMaster II

Newsgroup: rec.radio.amateur.boatanchors

Source record: 111769

Ahh-sooo! Do not have honorable Spaz-Master II but I sure
remember it in the catalog.

In 1969 I assembled my Knight Star Roamer. When I opened
the box (from Santa) I found it to be labeled "Made in Japan".
I felt ripped off...the Jolly One had betrayed me. But, I
put it together and it worked fine. My friends who also had
Roamers from previous years (theirs' were US Made) made
fun of me and my "cheapo Japanese Junque"...little
did they know at the time that some twenty years later,
we'd all be buying our radios from the clever Slant Eyes!

Another KnightKit Story,

Pat Keogh

Message-ID: <34bea6f2.3836180@news.mnsinc.com>
Source record: 111585
Cross-posted to: rec.audio.tubes,rec.radio.amateur.hojmebrew,rec.radio.amateur.boatanchors

Why pay through the nose for tubes?

Why even pay for information about where to get
valves / tubes / bottles for a more reasonable
down-to-earth price?

I've got a FREE listing of over 290 places!!
Yes, 290 places where you can buy tubes!

Most of them sell for very reasonable prices.

There is no need to pay someone for all of this information
or dig out the listings yourself. Many of these folks have e-mail
or even web site addresses too.

http://www.mnsinc.com/bry/mega/tubes.htm

See also:

http://www.mnsinc.com/bry/hamlynx/hamtube.htm

You will find some great information about tubes on the web
here.

All the best & ENJOY!

Message-ID: <34c5b792.2616347@news.fast.net>
Source record: 111587

For those who like a challenge.....For sale:

(1) HW-12A. Should be able to be cleaned up to a 7.5 or 8. Looks complete, but has some wires off PC board near V2 tube socket. Also, the relay appears to have been replaced. Looks restorable. Front panel and case good, but needs some cleaning.

(1) HW-12A. The ugly brother of the unit above. Front panel OK but case is rough. Missing some tubes. Missing one or two knobs. Looks like more than enough stuff on this one to get the unit above going and extra parts for the next one you find at a hamfest.

(1) HP-13A. DC power supply. Looks OK. Have cables.

I have the manual for the HW-12As, but no manual for the power supply.

Asking $60.00 shipped to lower 48. Please e-mail me if interested. Thanks!

John Schell N3AB

GO AWAY!!!!!!!!!!!!!!!!!!!!!!!!!!!!

tsunkndj@tickling.net randomly organized the following:
:-=-
:-=- Are you a guy between the ages of 18-23 who is
:-=- HOT, TICKLISH, and IN NEED OF SOME U.S. CASH?
:-=- Or, perhaps, even a new NEC Ready PC with a Pentium Pro
:-=- processor? If so, read on... I'm very serious about what you'll
:-=- find.
:-=-
:-=- UPDATE: Right now, I have 3 NEC Ready 9716 PCs available,
:-=- featuring:
:-=- 56 kbs US Robotics X2 modem
:-=- 4+ gig hard drive
:-=- 32 mb RAM
:-=- Video Card/2 mb video memory
:-=- Built-in Zip Drive
:-=- 24 speed CD Rom
:-=-
:-=-
:-=- Other PC systems are also available.
:-=-
:-=- My name is Terri. I am a female college student in the Boston area.
:-=- As a hobby...one that costs me ALOT of money...I maintain a
:-=- personal collection of amateur videos featuring guys being
:-=- tickled (usually for 30 or 60 minutes) by a girlfriend, good girl
:-=- friend, girl friends, or even guy friends. I am not a business,
:-=- video trader, or porn solicitor. My interest is in TICKLING.
:-=-
:-=- I am actively looking for guys to make videos that I can add to
:-=- my collection. Guys that interest me are YOUNG (basically,
:-=- my age...18-23), HOT (swimmer/soccer/runnerbuilt....on the
:-=- thin side...not too "big-n-buff"....with little or no bodyfat
:-=- whatsoever), and TICKLISH! No sex or nudity are wanted in
:-=- my videos. I just want to see guys tied up and mercilessly,
:-=- relentlessly TICKLED.
:-=-
:-=- If you are interested in this UNIQUE (and hopefully FUN) way of
:-=- making $$$$, please e-mail me. I need you to provide me with
:-=- a general picture (.gifs, .jpgs, .bmps, and pictures found on
:-=- webpage URLS are fine...and I have a mailing address to "snailmail"
:-=- regular photos, also) before I can make you a concrete cash offer.
:-=-

:-=- Average fees paid:
:-=- $125 for a 30 minute video
:-=- $250 for a 60 minute video
:-=-
:-=- PCs are available for multiple video deals and to groups of
:-=- guys (frats, teams, etc) that make videos.
:-=-
:-=- Money offered is determined by your looks, ticklishness, and who
:-=- will be tickling you.
:-=-
:-=- Asian, Black and Hispanic guys are ESPECIALLY welcomed and wanted!!!
:-=-
:-=- I have numerous online references that are available for contact to
:-=- assure you of my honesty, legitimacy, and SERIOUSNESS about all of
:-=- this.
:-=-
:-=- PLEASE NOTE: This is not a TICKLING SERVICES AVAILABLE
:-=- POSTING. I have a boyfriend, full cadre of friends, and plenty of
:-=- guys to tickle already. I AM NOT LOOKING TO MEET OR TICKLE ANY
:-=- GUYS ENCOUNTERED FROM CYBERSPACE!!!! I also do not provide
:-=- videotaping equipment, facilities, or girls to tickle you. All
:-=- aspects of video production are your responsibility!!!!!
:-=-
:-=-Think about it!!! E-mail me if interested: TerriTickling@hotmail.com
:-=-
:-=-
:-=-
:-=-

## 790. FS/FT: Old Magazines

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-01-16 00:00:00 UTC
From: Sandy W5TVW <ebjr@postoffice.worldnet.att.net>
Message-ID: <69nsnh$i0g@mtinsc05.worldnet.att.net>
Source record: 111596

I have the following old magazines from an estate sale to dispose
of:
"Radio Craft" issues are as follows:
1934: sep, oct nov, dec.
1936: Jan (BT), Feb thru Nov., Dec (FT)
1937: Jan (BT), Feb thru Nov, Dec-2 copies one (FT)
1938: Jan-two copies, Feb, Apr thru Oct, Nov-two copies, Dec
1942: Dec
1943: Dec

(FT)=Front cover torn
(BT)=back cover torn

The "market" prices of most of these vary from about 2.50 to 6.00
each. I will accept $3 each OBO for the lot.
Buyer to take care of shipping costs.
Also trade for ARRL/Jones "Handbooks" from early issues thru the 30's,
early radio texts of 20's/30's, what have you? Also hunting
an RCA HB-3 "Tube Handbook that is complete.

73,

Sandy W5TVW

Can anyone help me with some additional XTAL HOLDER information.

Take a look at what I have so far:

http://www.mnsinc.com/bry/ham/xtalhold.htm

Take a look.

This will give everyone information about crystal sizes for SOME mid-era rocks. What I need to add is data on the OLDER ones like CR-1/A, FT-171 etc.

What about any overseas designations too? We could add them also!

Also, I need some of the newer ones like HC-33/U and HC-49/U etc. etc. Can you help???

Bry, AF4K

Could be as simple as RF feedback, or a microphonic speech amp tube.
With the transmitter keyed up into a dummy load lightly tap the speech
amp tubes with the eraser end of a pencil and see if they respond with
noise while monitoring the signal on a nearby receiver.

Failing PS Electrolytics can cause audio squealing as well, if the
sections that are used for decoupling the plate voltage between stages
are drying up.

Hi Hammarlund Fans!
been putting my new scanner to work...
I now have a page up telling the SP-600 designations and
variations.

http://www.sojourn.com/hammarlund/sp600.html

there is the address, al tho you can get to it via my main page also.
just click on the 'SP-600' button located next to the other link buttons on my
page.
I hope you all enjoy the info.
I have scanned in about 19MB of Hammarlund info into my computer.
and have many, many more MB's to go, this is mainly for my book, which is
starting to
take shape, (but will be awhile yet). I will try to put up other information as
site space affords it to me.
BTW: My server informed me that on 2-1-98, my web address will change, again,
due to
a crash at the server site. I will post my new address as soon as I can confirm
it.
al tho the old address, will take you to the New site for awhile..
73 for now, and good Hunting to you all!

## 798. Johnson, National and Hammaurlund to trade..

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-01-16 00:00:00 UTC
From: Don Whitty <whittyd@nbnet.nb.ca>
Message-ID: <01bd22a2$e0df0340$c360a4c6@whittyd.nbnet.nb.ca>
Source record: 111604

My station is slowly and decidely becoming Collins (2 S-lines, 51S1, 30L1, 75A2(A)/32V2, etc...)

I have quite a bit of other stuff and I am interested in trading for some more Collins gear.....as those
who manage in the 90's say..... "get focused".

I have a real pretty Viking Ranger I, (with the TimTron mods) and a HRO-60 combination that I use
almost daily, that I would be willing to part out. (Also have a Viking II and a Valiant). The Valiant is
used with a SP-600 and Viking II with a beautiful (and I mean beautiful) HQ-180A. I am interested
in swapping for Collins stuff. I am interested in A line, S line and could really use a nice KWM-2....(A)??

Anyway...

If you have Collins and your "focus" includes Johnson or National......
Drop me a note and let's see
what we can do.

# 800. Re: HW-101 debug/help

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-01-16 00:00:00 UTC
From: markaren@ix.netcom.com
Message-ID: <34bfb635.9870060@nntp.ix.netcom.com>
Source record: 111606

Dave,
I had a similar problem after my HW-101 sat unused for a period of time and had turned it's 20th birthday or so. The belts that turn the tuning caps stretch out and the caps themselves run dry of lubricant about the same time. The fis is to add a little lube to the shaft bearings of the two caps and replace the belts. what happens here is the rig was tuned up when both caps were locked together by the belt/shaft. As they now slip, the preamp reaches peak at a different spot than the driver does and the result is low ouput and changes from band to band. Hope this is the prob. Also don't forget that HW-101's as built with nylon inserts for case screws leak second harmonic like crazy. If you are battling any TVI, this is the place to look first.
Al

If I can remove the board easily and all the components are waterproof, I
simply
wash the board in warm soapy water (Dawn) using a clean paintbrush, then
rinse well and dry by putting it over a lamp with a 100 Watt bulb for the
day.

I once read in a Tektronix brochure that they refurbished scopes beginning
with
a similar technique, in a spray booth. I used to do this all the time when
I worked
with the old PDP-11 computers, very successfully.

# 815. WTB: Bleeder resistor for VikingII

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-01-17 00:00:00 UTC
From: Jim Mullen <jmullen@map.com>
Message-ID: <34c15420.0@204.71.19.13>
Source record: 111525

Hello,

Looking for the bleeder resistor in a Johnson Viking II. The one I have is 20K, with the sliding tap. Needs to be at least 25W, but the parts list (nor the resistor) are identified with the wattage. Needs the slider to feed the modulator. It's identified as R13 in the parts list.

A used one would be fine, or perhaps a pointer to a parts source. I'm repairing the TX for a friend, and I know he will be very happy if I can find one.

Also, any more experienced folks out there have any recommendations for the Viking II. This one has been partially recapped, has the PTT mod installed. I subbed a string of 10W WW's I had around and it seems to play fairly well. Just want to get in a little better repair than a string of 10W resistors, tapped god knows where!

Thanks,

Jim Mullen, WA1ZUH

Yah. Know what you mean.
Back about the big Galveston TX USA hurricane, many years ago,
Texas City flooded and a motorcycle shop lost all their engines.
The guy they paid to haul them off dismantled them and washed
them and cosmolined them and stored them in a barn for a number
of years and his son got rich off them, or so I was told seveeral years
ago.
As time flies, so do prices.

## 829. Caig Deoxit -- Precaution

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-01-17 00:00:00 UTC
From: Ben Wallace <bwallace@sd.cts.com>
Message-ID: <01bd22ef$7f95e520$3506a3cd@bwallace.cts.com>
Source record: 111626

Would like to share a personal experience regarding Caig Deoxit.

First of all, Caig Deoxit is one of the best solvents/cleaners available. Spraying on tube sockets, pots, connectors, can really do magic. However, make sure when spraying to be careful that the overspray does not get on trimmer caps. I accidentially sprayed some trimmer caps on an SX-100. Immediately changed the hetrodyne oscillator frequencies on several bands -- making the dial calibration all messed up. Took a full night of drying before dial calibration fell back in line. Just something to watch out for.

Source record: 111630

Hello Folks:

Here are a few more Boatanchors/Accessories and Stuff for Sale. All Prices are in USA DOLLARS....and SHIPPING IS EXTRA. Gotta make some room for New Stuff that's on the way!! Some New listings......some old with reduced prices.....Hope you find something you like!!

Please email me direct at..... radiorob@serix.com to reserve any of these items.

Thanks...ROB VA3SW

##########################################################################################################################

Heathkit AT-1 Transmitter. 1951-1956. Heathkit's first Transmitter!!!Early Version with Black Collins Style Knobs. This transmitter came with 2 Knob versions....and this is the early version. Has original Black Meter with small metal hump over the Pivot point of the meter. Has a Phonoplug Jack for the Key...which I believe was one of several Key plug variations available.
The front Panel of the unit would rate about a 7-8 with all lettering sharpe and clear. However....somewhere in it's History...someone has drilled 3 holes in the front panel....right below the "Benton Harbor, Mich." Lettering. The 3 Holes have been filled with metal filler and sanded smooth to be flush with the faceplate. The 2 Position current switch seems to have been replaced with a Multi position switch?? Not sure on this... it may need to be replaced. The front and rear panel screws are not original.
The grey metal Cabinet is about a 7-8 as well...with no major scratches, dings, or dents. There are a few minor paint touchups...but the cabinet is Original paint. The SO-239 on the back has some deteriation to the Plastic Center....it could be replaced.
The copper Chassis is in Nice shape...and I don't believe there are any other mods done to the radio...to my Knowledge. The radio appears to be working fine....but I have not had it on the air. The person I bought it from says that she used it on the air many times.....Yes...I bought it from a YL Ham!!

So....as an overall rating...I would give this a 7 at least.(Save for the Drill Holes) If it weren't for the Drill holes/Repair to the front faceplate...it would be an 8.
The Radio comes with a Copy of the Heathkit Manual.

PRICE.......$100.00 USA Plus Shipping

##########################################################################################################################

Heathkit AC-1 Antenna Coupler.1953-1956.This is a Very Rare Heathkit item....Extremely hard to find. Has 2 Heathkit Grey Knobs with white

Pointers, and full red circle markings and the Coarse and Fine Tuning. Has original White Porcelin Antenna connector on Front panel and original indicator light. Front Panel Screws are not original. Face plate would be a 7-8 except someone has scratched markings around the tuning knobs to mark where they should set it for various bands!! Grey Metal cabinet looks like it has been repainted....and there is a Metal Plug in the rear of the cabinet that fills a Drill hole. Copper Chassis is Good...and there does not appear to be any other Mods to the unit. The unit is in working condition.

Overall I would give this a 6-7 out of 10.

The Unit comes with a Heathkit Manual Copy.

PRICE.....$50.00 USA + Shipping

##########################################################################################

Johnson Signal Sentry. Code and Phone Signal Monitor.Housed in a Johnson Burgundy Wrinkle Paint Box. With Greenish Blue Lettering and Viking Logo on front.This is a 9 out of 10. The Original Burgundy Paint is nice...just a few chips. This is wired up for a Ranger.

Exc. Condition

PRICE.....REDUCED.....$40.00 USA + Shipping

TungSol bindered tech manuals (TUBE MANUALS)

I have a 3 Volume Set of Tung-Sol Electron Tube Technical Data Manuals numbered Vol.1, Vol. II, and Vol. III. The dates on the Tech sheets range from 1938 to the Late 50's. These manuals are housed in Beautiful Hard Covered Binders that are Brown Leather Type Material. The Red Tung-Sol Label is on the front of each cover. They have a Heavy Duty 2 Ring Binder type Binding and each manual is about 3 " Thick. The Binders are in Excellent Condition...and are Extremely clean!! No Tears, Marks, or Rough edges ...these are real nice!! The pages inside are real clean and in nice shape. Some pages have been re-inforced around the binding holes so that all volumes are intact with no loose pages. There is no writing on the pages. Altogether...there is about 9 inches of hard to find tube data on Tung-Sol tubes...including Curves, specs, pin-outs, diagrams, Technical data, illustrations...pretty much covers it all!!

These manuals are from my personal collection...and they have been looked after...you would be pressed to find a nicer set than these.....

PRICE is.....$50.00 USA per Volume + Shipping.

PRICE for Complete Set of 3 Volumes.....$140.00 USA + Shipping

##########################################################################################

Message-ID: <19980117054900.AAA28831@ladder02.news.aol.com>
Source record: 111633

One other caution. DeOxIt D5 is extremely flammable. I found out the hard way several years ago around the time period when Caig made the mandatory transition from their freon based (formerly R5) chemical to the present day chemical make up (D5). I sprayed the D5 into a switch that carried a few amperes running through it and when I applied power to the equipment after squirting the switch, the switch was blown apart and I had a fire in the piece of equipment. First and last time something like that ever happened to me.

Caig also makes Dn5 which isn't flammable. It's good stuff too.

## 842. TICKLISH GUYS WANTED-corrected version ?

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-01-17 00:00:00 UTC
From: radiomatt@aol.com
Message-ID: <19980117140901.JAA00618@ladder02.news.aol.com>
Source record: 111639

Are you a radio collector between the ages of 18-93 who is
HOT, TICKLISH, and IN NEED OF SOME OLD RADIOS?
If so, read on... I'm very serious about what you'll
find.

UPDATE: Right now, I have 3 OLD RADIOS AVAILABLE. A Scott All-Wave-32, A Rick Mish rebuilt R-390A, and an RCA AR-88E

My name is Terri. I am a female college student in the Boston area.
As a hobby...one that costs me ALOT of money...I maintain a
personal collection of amateur videos featuring guys being
tickled, in their radio shack (usually for 30 or 60 minutes) by a girlfriend,
good girl
friend, girl friends, or even guy friends. I am not a business,
video trader, or porn solicitor. My interest is in TICKLING and Radios.

I figure Boatanchor collectors are ideal for this..they're always saying things
like
" I 'm tickled pink, I just got an ARC-5 (or something)"

I am actively looking for guys to make videos that I can add to
my collection. Guys that interest me are RADIO COLLECTORS, and TICKLISH! No
sex or nudity are wanted in
my videos. I just want to see guys tied up and mercilessly,
relentlessly TICKLED while they try to break free and tune their
radios....struggling, struggling to reach the R-390 or AR-88 tuning knob, or a
soldering iron, or a can of De-Oxit.

If you are interested in this UNIQUE (and hopefully FUN) way of
making $$$$ or getting even more old radios, please e-mail me. I need you to
provide me with
a general picture (.gifs, .jpgs, .bmps, and pictures found on
webpage URLS are fine...and I have a mailing address to "snailmail"
regular photos, also) before I can make you a concrete cash offer.

Average fees paid:
$125 for a 30 minute video
$250 for a 60 minute video
Plus $5 for each BOATANCHOR RADIO in view. (Sorry NO DEALERS)
OLD RADIOS are available for multiple video deals and to groups of
guys (ARRL, local chapters, ARES, MARS, get togethers, etc) that make videos.
I specifically do NOT want a video of scantily-clad hams tickling each other
in front of the swap tables at Dayton. You've been forewarned!

Money offered is determined by your looks, ticklishness, the quality of your
radios, and who will be tickling you.(FCC inspectors pay double!!)

Asian, Black and Hispanic guys are ESPECIALLY welcomed and wanted!!!

I have numerous online references that are available for contact to assure you of my honesty, legitimacy, and SERIOUSNESS about all of this.

PLEASE NOTE: This is not a TICKLING SERVICES AVAILABLE POSTING. I have a boyfriend, full cadre of friends, and plenty of guys to tickle already. I AM NOT LOOKING TO MEET OR TICKLE ANY RADIO COLLECTORS ENCOUNTERED FROM CYBERSPACE!!!! I also do not provide videotaping equipment, facilities, or girls to tickle you. All aspects of video production are your responsibility!!!!!

Think about it!!! E-mail me if interested: TerriTickling@hotmail.com

I think she forgot to customize her ad for this newsgroup, right? I took the liberty of doing it for her.

Message-ID: <34c0cbb4.101438639@news.mindspring.com>
Source record: 111648

I have for sale the following Hallicrafters:

SX-111 Receiver
HT-37 Transmitter

Both of these units are in excellent condition and are all original.
They have the original manuals and a 110V Dow key relay
is included with the radios. I prefer to sell all as a package
and would prefer a local sale especially since the transmitters
are so heavy. I live about 50 miles NE of Atlanta about 5 miles
off I-85. Price $300 for the package.
e mail to k4fb@mindspring.com

Thanks,

Terry, K4FB

If I may inject one more note....many older PCB's will have flux
buildup on them that must be remvoed..look especially near cap
connections and voltage regulators, but will be found anywhere.

## 853. Need Info on Military Bird Watt meter TS 118A

Yes, many large components were manually installed and soldered
AFTER the wave soldering process and frequently the manufacturers
decided it wasn't worth the effort to remove the flux.

Most of the older fluxes were not water soluable. Tricloroethane used
to be used to remove the flux but it is hazardous. I have found that
ethyl alcohol (ethanol) works very well and is one of the least dangerous
solvents to use. Get a bottle of 190 proof drinking alcohol; if you don't
drink any of it, a pint will last years. Be careful about its flammability,
though. Use only a small amount and don't smoke or use near any
source of ignition.

...Peter

## 856. Sky Chief Parts

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-01-17 00:00:00 UTC
From: ca@none.net
Message-ID: <34c1fa6e.3953779@netnews.voicenet.com>
Source record: 111653

I'm in need of the mixer coil for a Hallicrafters Sky Chief.

Anyone out there have a coil or a junker radio I can scavenge the coil from??

Thanks

Chuck

For Sale: Heath 401-1 Xtal Pak - consists of 8 plug in xtals for the SB-401 transmitter that allows for independent transmitter operation. Complete, guaranteed. Asking $40.

Bob Needleman, K3AC

# 858. FS: Drake MN-4 Tuner

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-01-17 00:00:00 UTC
From: Dan Radcliffe <kf9bp@execpc.com>
Message-ID: <69r00j$f8s@newsops.execpc.com>
Source record: 111655

This tuner is very clean and operates FB.
It is not "mint" but I would call it very good to excellent.
The only significant flaw is a small scratch on the right side.
I will guarantee satisfaction.
It will make a fine addition to someone's shack.
$125

Source record: 111669

I have used a Tempo One for years and I will be happy to answer any
questions you may have. The Tempo One is an excellent budget minded radio,
but it doesn't have many bells and whistles, even for a radio of its time.

You can e-mail me at AD4ZM@aol.com.

From: Rick Peterson <ve3fmc@execulink.com>
Message-ID: <69uduj$8a5$1@nr1.toronto.istar.net>
Source record: 111491

Hi I wonder if someone can tell me what model is the matching rcvr for the Heathkit SB401 xmitter? I just got hold a a mint SB401 with mic manual and might be interested in getting the matching rcvr.
Any help appreciated.
Rick

## 895. Halli parts needed

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-01-18 00:00:00 UTC
From: Jim Reid <jcreid@ix.netcom.com>
Message-ID: <34C2C061.5C0A@ix.netcom.com>
Source record: 111492

Hello all,
I need a couple goodies to finish up two Hallicrafters radios. Maybe someone out there can help.
1) S-meter for an SX-24/25. I have the Bakelite escutcheon, but the rest of the meter is missing.
2) Steering wheel knob for an SX-28A. The remaining knob has the area between the spokes filled in with Bakelite so I'd like to find another duplicate. Failing that, I would settle for two knobs with no filler.

Thanks for looking!

-Jim N6SVS

Jeff,
Go to your local WallMart and pick up the UNIVERSAL AC/DC ADAPTER.
It has many out-put voltages (3v,4.5v,6v,7.5v,9v & 12v) with 800ma.
It also has 6 plugs and a pollarity switch. I have one and it works like a
champ.
Good Luck,
Charlie

Agreed !!! For those, like myself, who prefer to stay away from
chemical means , if possible, use something like the R/S picks, and
miniature screwdriver sets (straight blades) to scrape the flux off
the board in the critical areas (connections/traces). A good
optical headband is of great advantage, along with a LOT of good
lighting, the more the better, as various fluxes are difficult to see
without good lighting.

The previous owner may have been using it on CB. After installing your
10 meter crystals, you may have to do some RF re-alignment.

## 920. ICOM R71 Digital Display

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-01-18 00:00:00 UTC
From: Frank Davis <fdavis@nf.sympatico.ca>
Message-ID: <34C1FD45.2D27@nf.sympatico.ca>
Source record: 111556

Some one on the group sent me a note about the lazy digital display on my R71. I lost the note and the e-mail address to reply.
CAn you send it again.

The note mentioned something about changing capacitors in the DC-DC converter to fix the display problem. Does any one have info on this mod or fix for the R71. The digital display doesn't work when the rx is first turned on. It will work ok if the radio is left on for 15-20 mins and the cycled off and on again.

# 928. FOR SALE: SWAN DC SUPPLY MODULE $45

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-01-18 00:00:00 UTC
From: wb9gkz@aol.com
Message-ID: <19980118195001.OAA28640@ladder02.news.aol.com>
Source record: 111564

FOR SALE: Swan Electronics Model 14-C DC power supply module.
This is the module that mates with the 117XC power
supply that will allow it to work on 12VDC. This is the
module only. It is in its original box and looks like it
was never used. Has original cables with it...sorry,
no paperwork or documentation. Will ship CONUS
for $45.00 (Swan 117XC supply not included).

Pat Keogh, WB9GKZ

## 929. HELP I.D. a S38-D lookalike

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-01-18 00:00:00 UTC
From: John Palmer <jpalmer@mn.state.net>
Message-ID: <34C2382A.DDCFE7C4@mn.state.net>
Source record: 111565

Greetings,

I need some help identifying a Hallicrafters shortwave radio.

It looks very much like an S38D,--- with an exception... The dial does
not have the CONELRAD markings on it.

Perhaps this radio was an export model???

Unfortunately there are no front panel or rear panel markings which give
any clue as to the model and vintage. Tho I assume the vintage to be
1957 because of the close resemblance to the 38D.

Any and all help appreciated.

John

You might have received an email with the header "RICHES ON THE NET", and the message as attached:

> From: mail@netropolis (Global Genesis), on 1/19/98 7:55 AM:
> Testing
>
>

This is obviously a spam-bot, searching for valid e-mail addresses, and then selling the list for top dollar to the "get rich quick" scam artists (yes, I get about 5 a day of those)

My guess is that the practice of test messages is now done to circumvent the practice where people put "nospam" in ther email address.

I sent a response, and weird enough, it did not come back as an invalid email address!

I suggest we ALL feed this spam-bot's email address (see above) with LOTS of "interesting" stuff!

Tks to NK4R, NQ5T, N0RU, KC9KX, WB0TUA, AD4S,
W4PM & Doran Platt for reminding me it was a LIONEL.

I came by it in 1962 after finding it on a shelf in the
control tower at Benina Airport, Benghazi, Libya. Local
operators had been forbidden to use it following complaints
from Malta, the other end of an AFTN circuit. Fancifully,
I had imagined it to have played its part in chasing
Rommel out of North Africa. I kept it until "upgrading" to
a much-unloved Heathkit keyer in Bahrain, 1964.

Correction to post...RF/Harris equipment for sale

Two RF-230M 2-30 Mhz. SSB radios, one nice, one dirty but should cleanup OK.
One RF-236 power supply unit and two-tone generator. One RF-231 Automatic
coupler unit. One large lot of spare PC boards and two extra RF units
for transmitter. Two Newmar 12 volt DC 35 amp power supplies, both look nice.
All gear removed from working installations a couple of years ago and stored.
One Texas Instruments TI-3000 SSB receiver/exciter and matching P.A./auto-
tuner unit. Both look nice, condition unknown.
Will sell the entire lot for $1000 plus packing/shipping costs.

73,

## 950. Signal Generator??

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-01-19 00:00:00 UTC
From: tuck@europa.com
Message-ID: <tuck-1901981652030001@dialup-a095.europa.com>

Thank all for your time

I have a prc 127 army radio rt-1594. What I am looking for is
a manual in order to maximize the programing. I am also intrested in
maybe another battery pack if you know where I can get on. It appears
that this unit is also missing a face plate that slides up from the
battery case that I believe supose to cover the front display some how.

Thanks again ..//

Gee:
I have an SB-34 here that works just fine. Of course it is 30 years old and somewhat crude by today's standards but still a neat little rig. I had the good fortune to get 3 of them for $100 about 7 years ago, one is still operating and one swapped even for an R-390A, not too bad altogether!

I had problems with the display in my 751 which I believe resembles that in the R-71. As temperatures are high in the dc to dc converter which is part of the display assy. the electrolytics tend to dry out and the switcher stops working. The best way to go here is to "shotgun" or in other words replace all of the electrolytics in the display assy. The cost here was less than $2.00 plus an hour or so of my time. Hope that helps.

Hi,

I'm not going to tell you that you won't find your meter here. Why I'm replying is to tell you I replaced MY burned out meter with an LED bar/graph display and inexpensive A/D chip from Radio Shack.

Since the metering circuitry was still intact, all I had to do was calibrate the input to the A/D chip so I got (at least) 3/4 scale on the display with full output.

I don't have the specs (as I threw it together on a whim and no longer have the radio) but will be willing to try to talk you through the process if you need.

Well this is fun. I bought a BC-375 transmitter WITH about 6 of those tuning units, the antenna tuner AND the dynamotor for $50, 2 years ago. In that package, I got an old Heathkit cap checker, TV signal generator, TV tube checker and a bunch of old radios.

Wow, think I'll put them on the 'Net and retire.

## 963. Boatanchors to trade for Collins

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-01-19 00:00:00 UTC
From: Don Whitty <whittyd@nbnet.nb.ca>
Message-ID: <01bd2470$846831c0$7560a4c6@whittyd.nbnet.nb.ca>
Source record: 111494

My station is slowly and decidely becoming Collins (2 S-lines, 51S1, 30L1, 75A2(A)/32V2, etc...)

I have quite a bit of other stuff and I am interested in trading for some more Collins gear.....as those
who manage in the 90's say..... "get focused".

I have a real pretty Viking Ranger I, (with the TimTron mods) and a HRO-60 combination that I use
almost daily, that I would be willing to part out. (Also have a Viking II and a Valiant). The Valiant is
used with a SP-600 and Viking II with a beautiful (and I mean beautiful) HQ-180A. I am interested
in swapping for Collins stuff. I am interested in A line, S line and could really use a nice KWM-2....(A)??

Anyway...

If you have Collins and your "focus" includes Johnson or National......
Drop me a note and let's see
what we can do.

Don Whitty

# 964. FS:1955 CQ magazines -- $25.00 plus shipping

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-01-19 00:00:00 UTC
From: jvercellino@sprynet.COM
Message-ID: <199801190130.RAA07231@m1.sprynet.com>
Source record: 111495

I have Volume 11 (1955) of CQ magazine for sale. All magazines are in very good to excellent condition. All have front and back covers, and there are no tears anywhere. I'd like $25.00 for the volume, plus shipping from the Chicago area. It's a real kick reading the various ads in the magazines; it's for lots of the same gear we're using now!

Here are some of the titles found in the issues.

Jan - "Q-Multiplier", "A 75-Watt SSB Exciter"

Feb - "The Story Behind the Viking Kilowatt", "Updating the 32V1"
Also this issue introduced W2NSD as editor starting in March 55

Mar - "The ARC5 Repackaged", "21-Mc Converter", "Linear Tips"

Apr - "A Table-Top Kilowatt (KWS1)", "A Simple CW Monitor"

May - "Converting the PE-101-C Dynamotor", Special Mobile Operating Issue

Jun - "Negative Peak Indicator", "Review of Eldico SSB-100"

Jul - "Review of the Heathkit DX-100", "813 Deluxe Final"

Aug - "RF on your Chassis", "The SWEEPER" (sweep function generator)

Sep - "More on the Grounded Grid", "Midget Budget Modulator"

Oct - "The NC300 Dream Receiver", "New Life for the Old Superhet"

Nov - "A Modulator for the Novice", "A Receiver Variable Selectivity Adaptor"

Dec - "Review of the Harvey Wells Twins - T90 & R9", "High Power Modulator"

Please respond to jvercellino@sprynet.com. 73, John WB9OVV

>Really? And why would that be, Jeffrey?

I don't know WallMart merchandise as well as you apparently do (no
WallMart on this island), so I can only guess that their PS uses
only a halfwave (or fullwave center-tap) rectifier, with no filtering,
resulting in pulsed DC. If so, that would still require me to break
open the case and remove the rectifier for my application.

Why the diskspace-wasting guessing game?

Both the SB-301 and SB-303 match the 401, and indeed are required to
operate the 401 if it is not equipped with the optional crystal
package. By far the the most desired of the two is the SB-303. James

> St.John's, Newfoundland
I wouldn't change anything in the power supply! Icoms are susceptible to intermittent contacts at the level of the plastic junction connectors. Many of these quirky problems can be fixed by pulling out the plastic male connectors, then reseating them. If this fails, spray a little DeOxit on the metal tips before plugging back in. Also, loosen then retighten your PCB grounding screws. These also can develop poor contacts. I would do this on the digital display board and any boards that are linked to the display. I've fixed several problems by this simple application. GL

> N5DUP

Concerning the Heath 2-pin mike wiring - Pin 1 is audio input; Pin 2 is PTT (hi). Ground is the shell (you pinch the braid between the spring and shell. All of the Amphenol 2-pin mike connectors are wired in this manner. (Heath, Johnson, etc). - Bob, K3AC

## 992. FS: Hammerlund HQ145A

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-01-19 00:00:00 UTC
From: Randy Cook <crcook@worldnet.att.net>
Message-ID: <6a07ti$1k3@bgtnsc02.worldnet.att.net>

I have a 145A that I purchased recently, but havent really had time to use or work on. It is in decent condition, works OK on all bands but the 4-10Mhz, where sensitivity is low. Email for details.

With ORIGINAL manual, in like new condition.

$125 + UPS

# 993. WTB: SPRAGUE TO-4,5,6,7 CAPACITOR TESTER

I'd recommend an AN/URM-25( ) HF generator. They're quite nice and
will do all the low frequency IF work and up to 50 MHz. The attenuator
scheme is pretty good, too. They can be had for about $100-$150 (or
less), depending on condition and model (although, in reality, the model
doesn't make too much diff.) and they're frequently on the net. Good
Luck

# 1001. Re: KWM2-A--Need Advice

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-01-20 00:00:00 UTC
From: STEVEN L UMBACH <N9ROU@prodigy.net>
Message-ID: <6a40dd$1ojk$1@newssvr04-int.news.prodigy.com>
Source record: 111332

Barry - You need to make a small jumper out of skinny 50 ohm coax. At one end you put a PL-259
connector that you can use to connect your coax cable PL-259 via a PL-258 barrel coupler. At the other end you can put a right angle RCA type phono plug. Then you have to slip the PM2 off the back of the KWM-2A. This may take more physical effort than it seems it should because you need to disengage the power connector while doing this. You must loosen the two big knurled round nuts that are on each side of the KWM-2A case (one on each side) to slide the PM-2 off. On the back of the KWM-2A you will see a bunch of RCA phono jacks. Plug the RCA phono plug end of your jumper cable in to the RCA phono jack labeled RF out which is next to the 4 ohm speaker jack. Let the jumper cable hang straight down - there is a notch cut out in the PM-2 to allow for cables to go between it and the KWM-2A. Then slide the PM-2 back onto the end of the KWM-2A making sure the metal "arms" on each side of the PM-2 engage with the knurled knobs on the inside of the case and retighten the knurled knobs. This may be a bit difficult the first time you try it. The power connector socket on the back of the KWM-2A needs to engage with the power connector plug on the front of the PM-2. After getting all that done you should be in business. Good luck. --- Steve N9ROU

Gentlemen,
Does anyone know when Collins switched from the round emblem over to the winged?? Was it all at once or was it just a few pieces at a time (ie 30L-1 one year then KWm-2 a while later??).

Any info would be appreciated.

Message-ID: <19980120.001101.3510.5.w5jv@juno.com>
Source record: 111460

For Trade for Hallicrafters or Drake transceiver:

1. IBM PS2/Model 80 PC (386) with NEC2A monitor. PC has 200 mb
hard-drive, 10 megs parity RAM, 1.44 floppy, micro-channel bus, mil-spec
construction. IBM Tower case with fold out carry handle, swivel out base
feet.
WIndows 3.1over Dos 6.22. Works perfect. Built to last ten lifetimes.
Plenty of room for expansion. W/battleship tough IBM PS2 keyboard.

2. Nec 2A monitor has 800 X 600 capability. Works fine but needs
service adjustments such as convergence.

3. NIB Sekosha (Seiko) 24 pin printer.

Would serve well in the ham shack.

Would like to trade items 1 - 3 for working Hallicrafters or Drake
transceiver & p.s. or xmtr/rcvr/spkr station.

73, Doug

Message-ID: <199801201512.HAA07270@m1.sprynet.com>
Source record: 111465

Yes, this is a true PARTS RIG. I have an EICO 720 that is mostly complete. It doesn't have the cover. It has been modified with solid-state rectifiers. It has been modified to include a built-in antenna relay. I've only turned it on once, and I have never had it on the air (I had to buy it to get the 730 modulator).

Saying that, I'd like $25.00 plus shipping for it.

Jvercellino@sprynet.com

: Actually, the 1A was a *tiny* little thing compared to the 2B or the R4. But
: it didn't work as well either.

A Drake 1-A isn't exactly tiny, OM. Although it's just a bit more than half as wide as a 2-B, it's also nearly twice as tall and deep and weighs a bit more. On SSB, my 1-A works about as well as any of my 2-Bs, although for CW a 2-B/2-BQ can outperform an R-4B, with appropriate fiddling on the controls.

A 1-A isn't small, compared with other Drakes, but it does look tiny alongside an HRO-50, Super-Pro or 75A. It's also got Drake's then-revolutionary, for consumer-grade gear, PTO and PBT, and a smooth 2-speed tuning arrangement that gave it a definite edge for SSB ops. For bang-per-1957-buck, that ain't bad at all.

# 1037. WTB: Johnson Transmitter 4-pin plug f/rear of Pacemaker-Thunderbolt

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-01-21 00:00:00 UTC
From: w0ui@aol.com
Message-ID: <19980121062701.BAA20061@ladder02.news.aol.com>
Source record: 111343

I have a Johnson Pacemaker connected to a Johnson Thunderbolt amp.
On the rear panel is a jumper wire connecting the two together.
One the back of the Pacemaker is a 9-pin Octal jack and on the back of
the Thunderbolt is a 4-pin jack. A 4-wire connection needs to be run
between the two for control. I have found a 9-pin Octal plug but still need
the 4-pin plug. There is a similar 4-pin jack on the back of the Pacemaker
used if connected to another type of amp.
* Does anyone have a 4-pin plug in their junk box that they can part with?
I have a picture of this arrangement on my web page at
http://members.aol.com/w0ui
- go to the w0ui qsl card and click on the first quarter 1998 hamshack picture.
Thanks.

# 1043. WTB: Coil Sets for HRO

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-01-21 00:00:00 UTC
From: Jeff Anderson <jwanderson@colonialassembly.com>
Message-ID: <34c5e4c4.0@news5.kcdata.com>
Source record: 111349

Hi All,

Just picked up a non-working HRO-60 at a hamfest for a project.

Unit has vernier scales for bands A, B, C, and D installed, but
only the C (3.5 - 7.3) coilset was included.
Would like to locate A, B, and D coils.

Would also like to find the small metal knob from the antenna trim
control, and the latches (?) that hold in the coil box, as these items
are missing also.

Are any of the coilsets from the other National HROs compatable
(aside from cosmetically) with the HRO-60?
I know that the 60 is double conversion, does this restrict the use
of other coils?

Since this is my first National receiver, I would appreciate any
insight anyone can give me.

Thanks -- Jeff Anderson

>
>Radio Randy

Don't yawl wish you could get that kind of deals?
I sure do.

I haven't seen a working tube checker for under 25 bucks,
and a cap checker would be about the same, I think.
The rest was just free?

Anyway, wow.

# 1047. Free Market Prices and Whining.

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-01-21 00:00:00 UTC
From: David Stinson <arc5@ix.netcom.com>
Message-ID: <6a54vi$4vr@dfw-ixnews5.ix.netcom.com>
Source record: 111353

I've written on this before, but I guess it bears repeating.

Someone whined about BC-375 Tuning Units selling for
"too-high" prices, and others whined along with
the chorus. Someone else "naa-naa-boo-boo"-ed about
his low-price deal some years ago.

What something sold for 2 years ago or two minutes ago
is irrelevent. The world is changing. The net means that
instant communication is available, and that makes sales there
somewhat like an auction. The "free market" sets the price by
suppling a buyer who will pay that price.
If the price is too high, the buyer won't appear.
That is how a "free market" works.

Bitching about the price of someone else's mutually
agreed-upon deal is grounded humanity's worst emotion-- envy.

Only three things matter in a deal:

1. Did the seller represent the item accurately?
2. Did the buyer pay the mutually-agreed price?
3. Did the seller deliver the item as agreed?

People-- you need to get used to it. The days of stealing
equipment from the uninformed are just about over.
The Free Market will now set prices. You can either pay them
or get a new hobby. If you can't pay them, you need to increase
your purchasing power and *EARN* the right to purchase what
you want. Deciding to be envious is to decide to be unhappy,
and that is *YOUR choice*, not the seller of some deal's action.
I can't afford all the toys I want.
I choose to be happy with what I can afford.

You say you want freedom and free markets.
You can't have that and cry-baby about free market prices, too.

>Why the diskspace-wasting guessing game?

Because I wanted to see why you thought DC wouldn't pass
through the rectifier in your equipment, Jeff. Of course it will,
so there is no need to remove any components inside. In fact,
a bridge rectifier is commonly used in DC powered equipment
to make it polarity insensitive to power supply connection.

## 1051. One month to Green Key Night (& Day)

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-01-21 00:00:00 UTC
From: haynes@cats.ucsc.edu
Message-ID: <6a5d3a$t1m@darkstar.ucsc.edu>
Source record: 111357
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.digital.misc,rec.radio.amateur.boatanchors

On Feb 20 each year we celebrate the beginning of FSK RTTY privileges on the HF bands and toast the memory of the RTTY pioneers who worked so hard back when it was hard work to get on RTTY.

This is not a contest, there are no logs to send in or scores to keep.
There are no rules, just suggestions:
Use a mechanical teleprinter if you can
Use 850 Hz shift if you can, at least part of the time
Use vacuum tube gear if you can
Wallow in nostalgia
Have fun!

Use the usual frequencies where Baudot operators hang out, and the time of the event is very casual; but Feb 20 is the day as it all started on Feb 20, 1953.

## 1052. Lower AC voltage to preserve rig?

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-01-21 00:00:00 UTC
From: jchol@aol.com
Message-ID: <19980121182300.NAA01967@ladder01.news.aol.com>
Source record: 111358

I have had some discussions concerning the merit of lowering the supply voltage by 5 or 10% to increase tube life? What is the basis for this claim?

Also, my SP-600 is located in a shed which is subject to environmental extremes, including occasional condensing atmospheres. Would it be prudent to maintain a low voltage with the Variac while the radio is inactive, say 40 volts to repel moisture?

Thank you for your consideration.

# 1054. KWM-2 Quirks

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-01-21 00:00:00 UTC
From: Frank Davis <fdavis@nf.sympatico.ca>
Message-ID: <34C6219A.2EAB@nf.sympatico.ca>
Source record: 111360

This just started over the weekend.
When I first turn on the KWM-2 the receiver is being desensitized and the S meter hangs up at about S7. After a while it starts to drop back but never goes back to zero. If I go to the tune postion and then back to receive the desensing stops. Is this the problem that can be fixed by placing the diode in the B+ line??

Also I wired up an Astatic 10D/G-stand mike to use with the rig. I notice that with the rig in receive if I tap the front of the mike the meter will deflect a bit and I can hear the tapping in the 312B-5 spkr. The level of deflection and the tapping sound varies with the level of the VOX gain pot! If I turn the pot all the way down the deflection stops etc. No the rig doesn't trip into transmit mode when I tap the mike. As an aside someone prior to me has replaced the regular mike jack with a standard 1/4" phone jack so I am using a regular Tip ring and sleeve 1/4" plug on the 10D mike.

Can anyone offer any help on these two quirks.??

Please reply direct.

The logic is that the rigs were originally designed when the line voltage was around 110-115, not the 120-125 we have these days. Supposedly it's not just the tubes that are stressed but many of the components (e.g. transformer, filter caps). A filament transformer can be used to buck the primary voltage down.

When my parents owned a boat they always left a light bulb on to fight the moisture.

For Sale: Three Hallicrafters Receivers and Speaker

Unlike the guys who sold these to me over a period of time, I'll give you the straight poop on their condition (selling them with buyers' eyes, so to speak). I'd hang onto them if I knew I would have the time to clean them up as they deserve and could spare the space they now occupy.

Before I bore you with the details, please note that all units are pick-up/meet only in the San Francisco bay area. My apologies to those who yearn from afar.

SX-100
------
This is the worst-looking but best-receiving unit of the list. This receiver is hot as a pistol, even with a dinky indoor wire antenna. All original knobs (could use cleaning). Both dials and dial strings in great shape (just a smidge of backlash). S-meter is cloudy but readable. Some minor rust on front panel bottom. A 1/8"x1/8" irregular chip in light grey paint above front left dial. Scratches (not deep, but plentiful) on dark grey trim ring. The lid is dirty and/or discolored (it may clean up nicely). Inside, the unit is quite dirty, with evidence of the radio being stored before I got it where woodwork had been performed. Crystal calibrator installed and working. Does not receive LSB, but I have some extra calibration notes about what the problem may be. Includes recently acquired W7FG manual/service guide/schematic. Other than apply power and check its receiving quality across the spectrum (and have it entertain me while doing some grunt work in the shack), I have done no work on this unit.

SX-62B
------
Excellent sounding receiver, with sensitivity approaching that of the SX-100 described above. All original knobs. Very minor wear marks on front panel. The huge glass dial is in excellent condition, but with a fair amount of slide-rule backlash, which may be fixable with re-stringing or adjusting the dial. Minor scratches on the black trim ring top and sides. The front center of the lid is slightly deformed downward (about 1/16") but not dented. The top of the lid is discolored/dirty in spots (may clean up fine). Inside, the unit isn't too dirty. Crystal calibrator does not function. I had this unit as my (rather large) bedside radio for awhile. I have performed no work on this unit. Includes recently acquired W7FG manual/service guide/schematic.

S-120
-----
This unit hears as well as I would expect an S-120 to hear. Pulls in the majors, at least through 16MHz. Could use a recapping to get rid of the hum. All original knobs (very tiny dent in the Bandspread knob's chrome insert).

Dial glass is excellent and the slide rule dial is also fine (perhaps a bit tight--hey, this isn't a flywheel-and-counterweight kind of rig). The bottom front metal panel shows some minor scratches except for what look to be strapping tape marks (idented and not removable) running vertically along the left edge for about an inch long. Original telescoping antenna and connector bracket included. Light grey cabinet appears to be original paint, with typical scratches; chrome trim ring in very good condition. I cleaned up the innards (no liquids used), and discovered all original Hallicrafters tubes. Comes with photocopies of schematics, manual, and "Your Guide to SW Listening".

R-46B Speaker
---
Some scratches on the edges of the front panel and rub marks on the raised "h" grillwork. Fuzz on speaker grill is worn in several places. Small cabinet dent on the top in the front left. Sound is OK, but I didn't spend a great deal of listening time with it to give it a critical audition.

Asking prices in USD:
SX-100 $150
SX-62B $225
S-120 $ 45
R-46B $ 50
If someone wants to drive to Half Moon Bay, back up the car in my driveway and pop the trunk lid for the whole shebang, I'll let it all go for $375.

I will also consider trade for tube-type 5-band SSB/CW amateur transceiver and power supply in excellent condition (on the order of a National NCX-5, Hallicrafters SR-150, Drake TR-4 -- even a KWM-2A[tee hee]).

These radios offer both immediate enjoyment and the prospect of rewarding projects preserving one of the finest U.S. brands of yore.

Please reply via e-mail, and include telephone number(s).

# 1072. Re: Lower AC voltage to preserve rig?

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-01-22 00:00:00 UTC
From: n2ey@aol.com
Message-ID: <19980122020801.VAA16704@ladder02.news.aol.com>
Source record: 111378

JCHol wrote:

>I have had some discussions concerning the merit of lowering the supply
>voltage
>by 5 or 10% to increase tube life? What is the basis for this claim?

Over the years the AC supply voltage has gradually crept upward in many locations. Older gear was often designed to work in the range of 110 - 115 volts AC, and if the line voltage at your location is significantly higher (125 volts is not uncommon) everything in the set is exposed to about 10% higher voltage than it was designed for. Too-high heater voltage can definitely shorten tube life, so adjusting the line voltage to the value the equipment was designed to work with can increase tube life.

In addition to this, consider the following:

There are three types of filament/heater/cathode used in most tubes.

The first type is the oxide-coated cathode. Used in receiving and small transmitting tubes, the oxide coated cathode gives high emission at relatively low temperatures and relatively low power consumption. This leads to long life. Most oxide-coated cathodes can tolerate voltage swings of plus/minus 10% without problems. This means a "6.3 volt" heater will work well from about 5.7 to 6.7 volts. Too low, as well as too high, heater voltage can result in damage to the cathode. The main reason that oxide coated cathodes are not used in all tubes is that they are not suited for very high plate voltages.

The second type is the thoriated tungsten filament. A small amount of thorium is mixed in with the tungsten used in the filament wire, and special treatment results in a thin layer of thorium coating the wire. Thoriated tungsten filaments work at higher temperatures than oxide coated cathodes, have shorter life, and generally less efficiency - but they will stand higher voltages. Thoriated tungsten filaments are used in medium and large size transmitting tubes with high voltages. They can typically tolerate only plus/minus 5% voltage variation - 6.0 to 6.6 volts for a 6.3 volt tube. In these tubes, running slightly low is better than slightly high, within the 5% range.

Finally there is the bright tungsten filament, which is pure tungsten, just like a lightbulb. These are used only in very large transmitting tubes, and very early types. They operate at very high temperatures and low efficiency, but can tolerate very high voltages. They will operate without damage (but with reduced emission) at reduced filament voltage - down to 65% of rated value.

All of the above is from various RCA tube manuals. The point in posting all this is that the results obtained by lowering the heater voltage depends on the type of tubes used. For most ham gear, the most tube life is obtained by adjusting the line voltage to give rated or slightly lower (less than 5%)

heater voltage.

>to
>maintain a low voltage with the Variac while the radio is inactive, say 40
>volts to repel moisture?
>
Based on the above, I would say NO. There might be some benefit to keeping the heaters on all the time, with no plate voltage. Some of the references I have read say that this is the way to go, while others caution against operating oxide-coated cathodes with no plate voltage for long periods of time. I'm not sure which is right. A better idea might be to house the receiver in a cabinet, with a light bulb (40 watt?) as a heater/dryer underneath it (in the cabinet) with a thermostat in the lightbulb circuit to smooth out temperature variations.

>Thank you for your consideration.
Maybe use a heating pad set on low under the radio? Probably best to not
sit the radio right on the pad, but to elevate the radio with some strips
of wood or such so the pad fits loosely underneath the radio. That should
keep things dry. And not wear the tubes.

Hi,

When I was in Malawi (7Q7JO) in the early 70's, a detachment of Royal Engineers came out from the UK to build a road in the bush. While they were with us, their technicians made use of our communications workshop. One item that they brought with them was a transportable HF station that I have since been unable to identify. The British designation would have been something like the Cxx (where xx is a two digit number). My ex-Royal Corp of Signals colleagues here in Oman are unable to help me on this.

The only features that I remember are :-

Usual olive-drab case with carrying poles that unscrewed at the corners so that it could be carried like a sedan chair.

Very roughly 3/4 metre cubic capacity.

Weight (needed four men).

U.S. or Canadian manufacture.

Estimated power out at 250 Watts (4CX250 finals?)

A remote unit which was taller than it was wide, with a crank handle and a counter like an R390.

I wonder if anyone has come across anything like this. I only ask out of curiosity but would like to scratch the itch all the same.

# 1105. Drak R4B w/ AC hum

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-01-22 00:00:00 UTC
From: afranco@mayfield.hp.com
Message-ID: <885514480.2137063428@dejanews.com>
Source record: 111411

Hi Fellow "Boater's"..

Got my hands an a Drake R4B rec'r. Works ok but getting AC hum on audio stage. Strange thing about it, I only "hear" it when using some headphones on the phone jack. Using the stock speaker, I cannot easily detect it. Searched and found some "mention" of mods for audio hum problems on the R4C line but not on the R4B..

Any suggestions..

Regards,

Tony

Hi all:

Please forgive the bandwidth, but I would like your help. Our Site is now several months old, but we're looking for new and exciting links to add to our "Links Page". The KB8TNQ Ultimate Amateur Radio Page is becoming one of the hottest Sites on the Web and we want your ideas.

Check into the Site, a link is provided below, and leave us a note with your comments and suggestions...it's that simple. The bottom line is that we want our Site to be useful to Amateurs and those interested in the Hobby.

Thanks for your time.

7-3,
Erv KB8TNQ

The SBE SB-34 (as well as it's predecessor, the SB-33) were rigs far ahead of their time in design and construction, sir. They were designed by Faust Gonset as compact, portable transceivers of "hybrid" construction, utilizing such quality components as Collins mechanical filters and Jackson Brothers two-speed vernier tuning dials. Having owned several of these SBE rigs in the past (from when they first appeared on the market in the mid-60's), I found your comments (above) to be quite surprising. Of the half-dozen SBE rigs I've owned, none were "real loosers" (sic), none were "limons" (sic).

Perhaps you're confusing the SBE rigs with those of some other manufacturer? "Loosers" are arrested for walking the streets, are they not? "Limons" are a rare (hybrid) fruit which is yellow with green stripes, right? "Limons" aren't in season right now. "Loosers", however, are always in season.

From: k4fb@mindspring.com
Message-ID: <34c89d91.55144374@news.mindspring.com>
Source record: 111286

I am accepting offers on the following Hallicrafters station:

SX-111 Receiver
HT-37 Transmitter

Both of these units are in excellent condition and are all original.
They have the original manuals and a 110V Dow key relay
is included with the radios. I prefer to sell all as a package
and would prefer a local sale especially since the transmitter
is so heavy. I live about 50 miles NE of Atlanta about 5 miles
off I-85.

e mail to k4fb@mindspring.com

Thanks,

Terry, K4FB

From: Jay Wicklund <jwicklun@halcyon.com>
Message-ID: <34C8DAFC.80DF1038@halcyon.com>
Source record: 111292

My collection of boatanchors exceeds my current storage space, something
has to go. This is the first:

Hallicrafters SX-130 General coverage receiver
535KHz - 1610KHz
1.725MHz - 31.5MHz
features include product detector & crystal filter

Condition is Very Good to Excellent. The front panel is beautiful, very
well cared for. The radio looks like it
has the original paint. The top has numerous light scratches (not
through the paint) and a couple of small scratches
that show metal, but are not gouged.

Complete alignment about a year ago. Asking $150 plus shipping.

Jay Wicklund, KI7RH
Bothell, WA

Hi fellows,
Tnx to those who picked up some of my excess junk in the form of 11 pin (octal style) plugs and sockets. I still have a few left.

For Sale: A mating pair of 11 pin (octal style) plug/socket with cord caps and snap rings (male is brown micalex, female is black bakelight--both built by amphenol) NOS. $10 for a mating pair with caps and snap rings or will sell as a pair of males or pair of females for the same price with cord caps and snap rings. Post Paid conus in padded envelope.

I also have a couple of the Collins TSV60 1KW dry dummy loads left at $125 each plus UPS on 17 lbs from my zip 95827. Units have HN connector which is easy to change out to N or VHF type with a small cover plate. These are NIB from Depot pack and built really well.

Tnx for the read.

Bob, KE6F

Source record: 111304

I have a Hammarlund HX50, that I was about to offer for parts, however after trying it out, if fired up on CW, and lit a 100 watt light bulb dummy load nicely. Seems a shame to break up a rig like that. It is missing some knobs, and bakelite shafts, and needs a clean up. The cabinet could use repainting, but there are no holes cut into it, and the front panel, meter and dial are in decent shape. $80.00 as is plus UPS shipping and some bubble wrapping cost.

I will also include a copy of Hammarlunds "INSTRUCTION AND SERVICE INFORMATION" manual for it. If anyone else would like a copy of this manual, I would be glad to send one for $10.00 US including postage.

Most of the older stuff can be repaired or improved upon by any competent ham with a minimum of tools and test gear. Try that with an FT-1000MP or a 706 Mk II.

The biggest problem is getting tubes - the end will one day come!

Bill W2BLC

I agree on the repair side and for those of us over 50 I would also suggest that parts will never be a problem either (heh heh). But to the "Improved Upon" aspect of your post you may have set yourself up for a real slam dunk if the "Collector" types get wind of your comments or suggestions that anyone in their right mind would even think of making a modification to an ancient radio icon--especially if it is a ARC-5 or a piece of sacred Collins gear. But I, like yourself, like to at least think that I've been able to improve upon my old junk be it Collins or Military toys. But I am afraid that the new crop of boat anchor dudes are more interested in what I call the "Do the Numbers Match Corvette" crowd rather than true radio buffs of old who loved to drill and patch until their radio worked like they wanted it to regardless of aesthetics or actual improvement were the truth to be known. But as the comedian Dennis Miller says, "This is just my opinion--I could be wrong."

# 1155. Funny Numbers on Navy Keys

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-01-23 00:00:00 UTC
From: "Neal McEwen, K5RW" <nmcewen@metronet.com>
Message-ID: <34C90159.3DEA@metronet.com>
Source record: 111312

Gents,
I've gotten several questions from you guys lately about the makers of Navy keys. You know,... the ones that have a number that start with CJB or CAQ or CMI or something like that. You probably have a key marked CJB26003A or similar. Want to know what all those letters and numbers mean? Want to know how the scheme evolved?
I've put together a short article on the Navy naming coventions for keys and two tables of the codes vs. the maker. From this you should be able to identify most any navy key made from 1915 to around the Korean War. You can also get a rough idea of the vintage.
Take a look at http://www.metronet.com/~nmcewen/Navy_numbers.html
If you don't find you key there, let me know. I've got some other resources I can check.
thanks to Ray Mote for providing part of the input.

Source record: 111423

I have the following Radio, and electronic equipment for sale. Reasonable offers or trades for radio and High End computer EQ. will be considered. All working last time tested unless noted. Shipping is extra.
Thanks

• Kenwood TS-820S - Digital Ham Transceiver 160-10 meters. Looks good and works well. Comes with hand mic and SSB filter installed. $400

• Tempo-1- Tube type Ham Transceiver/with Power Supply 80-10 meters. Looks good and works well. 100W output. $200

• Siltronix 1011C- 10 meter and CB AM or SSB Transceiver. Looks good and works well. 250-300W PEP output on SSB. $200.

• Motorola VHF Transceiver All tube Model: PA8270J SER.NO: 8697. It receives on 150.750 & 150.570 and transmits on 160.025. There is also a tone Signal and intercom control on front below speaker. This is the type transceiver that was used by police and fire dispatchers in the past.
Don't know if it works. $80

• Grubndig Model 2066 AM/FM/SW all tube receiver. Nice wood cabinet.
It isn't working. $75

• Heathkit HW 101, 80-10 meter transceiver. No Power supply. It is receiving, but don't know about transmit. Not able to test. Looks are 7/10. As is $100.

• Siltronix VFO Model 80. $75

• National Two/Seventy Ham Receiver with 6 Meter band. All Tube with matching speaker $225.

• National NC 188 Receiver. It looks good and all together, but not receiving.
On looks I would say 7/10. $60

• Hallicrafters Model S-108 SW Receiver with a calb. Ham band spread. Looks good works well.$100

• MFJ Rtty/CW Computer Interface Model MFJ-1224, used for copying code from the radio to your computer. $50

• Pearce Simpson, Guardian 23- All tube CB Transceiver/with mobil power cord and mounting bracket. Looks and works Good. $125

• Traynor, Group Two B- Audio Amp Head. High/ Low mic. in puts. Master volume, volume, bass, treble and tone shaper controls. $150

. Channel Master- Tube Stereo Receiver (Model 6612) and matching amp (Model 6601) Looks good and plays on FM. AM not working. $150

• Sams CB Photofact- Several volumes, some continuos: numbers as follow: Continuos 1- 55 and 57- 65. Individual 70,72,80,88,93,98,104,120,122,128 178,190,226. Also have some two of same number. $4 each. Special discount price for all.

• AR Inc.- Stereo Amp, all solid state. $125

• Yashica Eletro 35- 35MM Camera with Telephoto 1:4 , Wide Angle 1:4 ,Tele-wide finder lense and flash attachment. $100.

From: n2ey@aol.com
Message-ID: <19980124025800.VAA05572@ladder01.news.aol.com>
Source record: 111225

Here's my all-time best bargain story:

Ten or twelve years ago, I was at a local hamfest and saw a BC-342-N on the club table. Complete, in fair shape. Paid the asking price for it - two bucks! Brought it home, plugged it in, and it worked pretty well. Did some cleaning up, swapped tubes and aligned it, and it really played well. Still have it, still works pretty good. Use it for general SW reception, WWV, etc.

But why was it priced so low? - Because NOBODY wanted it! If I hadn't bought that '342, it was headed for the dumpster. All of the bargains of bygone days were that way because it was a buyer's market - many folks just weren't interested in "that old stuff". Recently, (the past 7-8 years or so) for some reason, interest in older gear has boomed, and so have prices. This is just the free market at work. If a piece of gear is priced too high, it won't sell. The only "control" that's needed is free access to information - what it cost new, how well it really works, etc.

The real question to ask is: why all the new interest in old gear? Some of us never lost interest in the classics, but it seems that lots of folks are joining the "boatanchor" ranks. I wonder why?

Source record: 111241

You don't really need a shematic or
manual as this rig is simple and straight-
forward.

1) open it up and be sure no shorted/broken wires or burned parts.

2)Be certain the antenna of choice is
1:1 on desired band

3) connect exciter and tune it to a LOW
output (or build a swamper) [WRL sold
a small 4 pos. swamper unit for these]

4) if you have TWO swr bridges, connect
one between exciter & amp; one between amp and ant. (gives easy way to
see drive and output, both at same time)

5) attach GOOD rf ground to Amp. Important. I used top get rf burns;
hate the smell of burning flesh - especially when its
mine!

6) plug KEY into exciter; tune slowly with key down only briefly till
everything is in resonance.

7) switch to ssb & your in business!

Warning: The power Transformer in the LA-1 is under-rated for the job,
and can
be burned out - word to the wise- dont load it too heavy, as this xfmr
is hard to find if needed.

Its a good box! Have fun!

Plum,

The SB-200 was not designed for AM (continuous) duty. If he is going to use it on AM the power should be reduced by at least 50% or more, and he is probably going to wear out those 572B's pretty fast.

Hi.. I have been following S-38's for the last couple of years, but I have never seen an olive green set. Are you talking about an S-38, or A, B, C, D, or E? The S-38 were wrinkle black or smooth black finishes as far as I know. The S-38-A was a smooth black finish, the B was wrinkle, the C was gray hammertone, the D came in black and possibly gray. The E came in an imitation wood finish, I think white as well as hammertone gray. I may be wrong and would appreciate any corrections.

I think S-38's are a great receiver. They are of course in need of a good antenna and they howl if turned up too loud (unless you use an external speaker). But they are nice and wide and have a very pleasing audio quality and they are rugged! Further, there are a lot of them out there and they are not expensive. They are a perfect first radio for anyone who would like to get started with old tube receivers.

Steve,

There have been two Star Roamers at auction on eBay
with the following results:

eBay#4185336 - very nice, like new, operational,
14 bids ranging from $30 to $80. Sold for $80

eBay#4248784 - not great shape physically or operationally,
7 bids ranging from $25 to $47. Sold for $47.

All depends who wants it and how much they want it.

Do not use 8 ohm headsets..this is too low of an impedance and will give the hum your referring to. .The Drakes require 600 ohm. You can put a 100 ohm resistor in series with your headsets if they are 8 ohms or I have used 300 ohm headsets with good results.

## 1216. Help!R.F.G.

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-01-25 00:00:00 UTC
From: dickb@internorth.com
Message-ID: <34CBF787.E08C859E@internorth.com>
Source record: 111129

I've come across an old American made RFO, last time I used any vacuum tube equip. was back
in 74-78 (high school). where would I use this piece of equip. What do I need to make a complete
station using boatanchors. Model of this unit is: SG-47. I live in the north an often come across old stuff
prob. from the DEW line sites ( cold war stuff) I've checked the local library for old ham books but we are limited to resourses here in
YK,nwt. also does any one know about the Canadian Marconi Radio.
I also came across some old RCMP transcievers, looks about 3-8 mhz range with 6146a's in them.
Any help, dates, value, etc. would really be nice,73's

# 1218. Re: Lincoln 6 Meter Rig Questions

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-01-25 00:00:00 UTC
From: Michael Black <blackm00@CAM.ORG>
Message-ID: <Pine.GSO.3.94.980125222749.20189B-100000@Ocean.CAM.ORG>
Source record: 111131

I'd be fairly certain that it's AM only. But as for details, I seem to recall seeing ads for a "Lincoln Laboratory" that might have sold a six meter rig, yet I also thought Lafayette might have sold a six meter rig with the "Lincoln" name on it. If you can give some sort of answer about this, I'd try looking in some old magazines. I'd place it late fifties or early sixties. I did just look through some CQ's of that vintage that were handy, but I see nothing.

# 1230. SB-200 Problems

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-01-25 00:00:00 UTC
From: martyt@pobox.com
Message-ID: <34cbc5ae.178861659@nntp.a001.sprintmail.com>
Source record: 111181
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.amateur.equipment

My dad has an SB-200 that he's using on AM and having
some problems on 20-15-10m bands - when he tries to load up the
amplifier, he notices that the grid resistors R21 and R22 heat up
excessively. He says the grid current is about 20mA. He's afraid to
use it much on those bands at high power because of the heating
problems. On SSB it also heats up but not as bad. Finally, he notes
that the loading cap is fully meshed when he runs on 75m AM.

Any ideas what might be wrong with the SB-200? Any special
modifications or other precautions for use on AM? He also notes that
one of the 572Bs may be a little soft - apparently it glows a little
more than it should. Aside from maybe replacing the tubes, what else
should I have him look at?

Please reply via e-mail if you have any ideas and I'll forward them to
him. Or if you're on AM at 3.885, give him a yell - Lloyd, W0AKG in
Branson, MO.

Thanks

-Marty KC0AKA

Message-ID: <34CADC42.6A5BD6AF@abs.net>
Source record: 111184

I have a Swan 250 6 meter rig for sale. Cover 6 meter AM, SSB, and CW. Includes VOX unit, an Astatic power hand mike, and an AR square preamp. Radio only puts out 30 watts or so, using some used 6146A's, perhaps with a little love you can improve on it. I have the manual and schematics, and a spare junker chassis and power supply (which works btw). I am asking $175.00 plus shipping.

I also have some other items for sale/swap:
Kenwood TV-502S 2 meter transverter. Plugs right into the back of a Kenwood TS-520, 520S or 820. 10 watts output and has a Ramsey MOSFET preamp built in.
$200.00/ bo

Hallicrafters TO keyer-- looks good and works $40.00
MFJ 816 SWR power meter
$15.00
Mirage B3016 amplifier 30 in 160 out with Gasfet preamp $150.00
Henry Electronics 440 mhz brick 5 in 40 out
$60.00

Want to Buy:
6 meter brick, 100 to 150 watt class, will consider trade.

I just brought a used Yaesu 736 and need to make room on my desk, so if you are intrested in any of the items reply to me by E-mail or call me at 410-429-3985. Thanks and 73
Bruce N3LSY

>
>

For AM operation, the linear must be loaded to full power output,
and then the drive reduced to produce a carrier level of 25 percent
or less. A fully modulated AM carrier produces peak power outputs
of 4 times the carrier level. If assymetric modulation (higher level
positive going modulation) is used, the effect may be even greater.

Unusual AKAI/ROBERTS 1725-8L III REEL TO REEL & 8 TRACK DUB DECK

A Very Unusual deck for 8 Track lovers. This unit was probably made by Akai is my guess for Roberts. Says Made in Tokyo Japan on it.

From the Back of the Unit it states:

MULTI-PURPOSE TAPE RECORDER

4 Track Stereo/Mono Reel to Reel
8 Track Stereo Cartridge
Transfer from reel to Cartridge

The unit appears physically in fair to good condition for its age. I do not have a power cord to fit the unit or manual, so I cannot vouch for its mechanical condition by testing it. It is best to assume it may need some attention or for a parts unit. $45 or best offer

OR SWAP FOR TUBE TESTER.

Plus U.S. Parcel Post Shipping costs which are not much.

I'll pack it free

International buyer welcome.

# 1247. SCHEMATIC;RCA CSU-15B2

I have a rca csu15b2 440mhz all tube base station about late 50 or early
60.
It is working fine and came on ham band.
I would like to get a schematic in case it ever needs work.
Thanks,
P.T.

# 1260. Antique Radio Meet in North Carolina

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-01-25 00:00:00 UTC
From: Ron <kc4yoy@pop.trellis.net>
Message-ID: <01bd29df$f499ae00$cf5096d0@ron>
Source record: 111211

WHAT: Antique Radio Collector meet in North Carolina

WHEN: March 20, 21 1998

WHERE: Sheraton Airport Plaza Hotel, I-85, exit 33 ,the Billy Graham Parkway, Charlotte NC

1998 brings you the 22nd annual AWA Spring Meet in the Carolinas, hosted by the Carolinas Chapter of the Antique Wireless Association.

The registration desk will open at 12noon on Thursday March 19th for early arrivals.

Dr. Harold Cones noted author of the excellent book on the history of the Zenith Transoceanic will give a talk at 8pm on the early years of Zenith.

NOTE! There will be no FleaMarket activity on Thursday. There will be NO buying, selling, trading, or displaying of merchandise before 8am Friday March 20th.
This will be strictly enforced. Those violating this policy will be asked to leave to meet.

Friday March 20th. The FleaMarket will open with a BANG at 8am sharp and remain open all day. Equipment check-in of the auction will start at 1pm with the auction beginning at 3pm.

Friday evening there will be a SPECIAL reception and open house at The Museum of the New South located in downtown Charlotte. A charted bus will depart the hotel at 7pm to carry as many people as possible to the museum. Those that prefer to drive will provided with a map. The museum is very easy to get to from the hotel.
At the museum you will see an exhibit on radio in the south called, " Don't touch that dial, Carolina Radio since 1920". Local members of the Carolinas Chapter of the AWA played a big part in setting up and loaning equipment for the exhibit.

The meet will continue on Saturday with the FlaeMarket starting first thing in the morning. Check-in of equipment for the Old Equipment Contest will be from 8 till 10am. The contest room will be open for viewing from 10 until 12noon and again at 1pm with the programs starting at 1:30pm. The two main programs are related to radio history in the Carolinas, the first one is on Dr. Reginald Fessadon and his early wireless experiments done at Hatteras on the outer banks of NC. The second program is on the early history of pioneer broadcaster WBT.

For Registration information send a SASE to: POBox 3015, Matthews NC 28106.

I was glad to have had a SB-33 once upon a time. Thems that
remember those days when "mobile" was build it yourself or go
without appreciate the inovation which these rigs once provided.
Only thing about the 33 was the 'thin' output section.

# 1269. FS:Collins 75A-2 Receiver and cabinet

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-01-25 00:00:00 UTC
From: mc@shore.net
Message-ID: <6agjue$c5c@northshore.shore.net>
Source record: 111220
Cross-posted to: rec.radio.swap,rec.radio.amateur.boatanchors

Gotta clear out some more stuff!

I have a nice COLLINS 75A-2 receiver downstairs that needs some cleaning up but will be a 9 or a 9.5 with a bit of effort. It is original, no mods and has a home-brew plug-in crystal calibrator.

The front panel is perfect - the cabinet (original) could use some touch-up.

Price is $400.00 plus shipping. I will pack it competently as part of the deal - all you have to pay is the actual UPS or FedEx charges.

Please respond by e-mail if interested.

73,

Michael Crestohl, W1RC
mc@shore.net

# 1270. FS: Millen 92200 Antenna Tuner

Newsgroup: rec.radio.amateur.boatanchors

Message-ID: <6agk84$co1@northshore.shore.net>
Source record: 111221
Cross-posted to: rec.radio.swap,rec.radio.amateur.boatanchors

This is the big classic James Millen antenna tuner covering from 80 to 10 meters. Its beautifully built as is all of his stuff on a copper chassis, big, positive nand switch, smooth variable capacitor controls, etc. Cosmetically 9 on a scale of 10. Front panel perfect. Will handle full legal power output and then some. Remember this was made back in the AM days when output was measured in carrier power.

Price is $250.00 plus shipping. I will pack competently as part of the deal. All you pay is the actual UPS or FedEx.

If interested please reply by e-mail.

73,

Michael Crestohl, W1RC

From: Joel Levine <joelbmh@worldnet.att.net>
Message-ID: <6advhe$hfj@bgtnsc02.worldnet.att.net>
Source record: 111268

Hallicrafters SX25. Cabinet is clean but switch for crystal calibrator added to front panel. Otherwise, good condition with pretty clean front panel and a few scratches on the cabinet. Working but seems to overload even when AGC is used. S-meter, BFO working fine. This was a high end Hallicrafters with Crystal filter. Has two stages of RF and p/p audio so it should be a hot receiver if working properly.

$100 plus shipping from 11740

# 1281. FS: Drake 'B' Line

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-01-26 00:00:00 UTC
From: WQ5J@airmail.net
Message-ID: <885735189.1562050562@dejanews.com>
Source record: 111077

I have a real nice Drake 'B' line for sale...Front faces are perfect... The cabinets have no dents or big scratches and only a few blemishes in the paint...I'd rate the overall condition about an 8 - 8.5...

The receiver dial is a little discolored in one area, otherwise the twins work great and have all pieces, T4XC, R4C, MS4, AC4...price is $385, shipped or $350 you pay shipping...

I have another B line and just got a chance to buy a TR4CW, RIT so I've got to sell one...

I can be reached at 817 441 5767 or E-Mail: wq5j@airmail.net

73, tom wq5j weatherford, tx

# 1284. WTD: Modulation Transformer

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-01-26 00:00:00 UTC
From: Joseph J Curry <71407.1774@CompuServe.COM>
Message-ID: <#jYxV7oK9GA.72@ntdwwaaw.compuserve.com>
Source record: 111080

Fellow BA Enthusiasts:

HELP! Over the weekend the modulation transformer in my 813 rig gave up the ghost. It developed a short between the primary and secondary...an unusual, but fatal flaw. A replacement is badly needed.

The transformer that died was a Thordarson 300w multimatch (T21M64). The easiest, but least likely, replacement would be one of these. Barring that, I need a transformer rated at 300 watts or better with a primary to secondary turns ratio of 1.4 to 1.5 and the secondary capable of 300+ ma (the transformer was rated at 500 ma and actually "runs" at 250 ma).

Anyone have such a beast hanging around?. The only hitch is that the connections for the transformer must be on the top or sides, not leads or terminals coming out the bottom (ala UTC).

From: dxguy@earthlink.NET
Message-ID: <34CBEAE7.7CCE@earthlink.net>
Source record: 111143

A good friend of mine is looking for a good VLF RX to do some serious LW beacon DXing. Radio must work well, superhet with narrow CW filter, with PS & speaker (preferred). He is especially looking for an R392 (to be used with a converter that he will buy) or R648/ARR41. He has a total budget of only $200 (we've all been there in our careers), so please keep that in mind. He's not looking for a cosmetic "beauty" but has limited technical/repair capability, so operation is foremost.

Please respond directly to him with as much info as you can supply. He has been "bitten" pretty well by the DX bug, so perhaps someone can help with the grand obsession?

Respond to: Kevin at LWDXER@juno.com

Thanks & 73s

PS I'm posting this to several NGs, so delete if you get more than one (like I always get - hi!).

I can remember my first Dayton Hamvention in 1975 and all the old gear that was available. the prices were good and you could afford to pick up something, take it home, and play around with it for as long as you had interest in it. The problem was that you would probably not get back out of it what you spent for it, no one wanted the older gear back then. I bought a 75A4 for $215, a HQ120X for $40, a HQ110C for $45, etc. Its too bad that so many people are into grabbing up older gear just to resell, there are no real bargins anymore, supply and demand?, bah! Maybe I was just stupid for not bidding on the pallet loads of 75A4's and KWM2's that the military sent to surplus...guess I could have been a millionaire by now!

Don't think this cannot still happen. All collectibles have their cycles that are less-than-predictable, and even recently we had a downdraft in old gear for awhile. I've simply accepted that $$ is not a valid reason to buy/own old gear.

# 1299. Re: Hallicrafters S-38 ("Canoe" Anchor?)

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-01-26 00:00:00 UTC
From: Mike Cowart <cowart@idiom.rsn.hp.com>
Message-ID: <34CCA1DC.582E@idiom.rsn.hp.com>
Source record: 111150

The first S-38 was produced in 1946. It WAS olive green--not black or black wrinkle. I have one that is in very good condition. It has the cardboard backing and the original manufauring sticker on the cardboard bottom. I also have the original manual and service bulletin. They are probably more rare than the receiver itself. As far a good first receiver...yuk. It is subject to oscillation, is very frequency-unstable, and is transformerless (AC/DC). I used one as my first receiver and was so glad when I could afford a real receiver :) But, I do like to look at my find and think back about my early days of ham radio when AM was still king.

If you're looking for one, there are plenty of them out there, but finding one with the cardboard backing is not going to be easy.

Good luck

Mike - WA5CMI

Allied (Knight) and Lafayette both sold the same radio with their
respective names on it. Minor changes im each. Both radios were made by
DeWald Labs (of Hi-Fi fame). They are are A.M. xtal controlled and I
think in the 7 - 10 watt range. Can be a fun little radio if you can
find someone else to talk to!!! :)

Date: 1998-01-26 00:00:00 UTC
From: ddouglas <w5tn@jumpnet.com>
Message-ID: <6ahbrj$9el$1@news.jumpnet.com>
Source record: 111154

I'm starting to bring life back into a Heath HW-101 xcvr, but I can't get past stage one....

(by the way, I have a manual & schematic, and I'm going through it but this may be a common problem and maybe you've seen it before.)

When I power up the HW-101 resistor R940 overloads and burns up. When this first happened it was the original 100 ohm resistor, and I thought that It might just be old, etc. However, I replaced the resistor and it overloaded again. Obviously something upstream is wanting the current. Humm.. R940 is the 100 ohm resistor between the 300v B+ supply for the driver/preselector section. The resistor is chassis mounted between B+ and RFC 801, a 15uH inductor. If you look in the manual on page 184, you'll see the resistor that I'm talking about (in the picture) It's in the driver/preselector section of the schematic. So far all of my preliminary checks have shown nothing wrong.

Thanks in advance,
David, W5TN

Good morning. I've got my test bench at home set up finally.
For those of you running Motorola Mitreks, I can handle tune
up, align re-channelizing and conversion to full duplex and
9600 baud packet operation.

Tekk metering panel, universal control head and a Cushman
CE-3 along with the standard stuff like scopes, PL generators,
watt meters and the likes.

Reasonable rates, quality shipping packages and the skill
required to do board level repairs.

Send me e-mail if you've got some equipment you'd like to
bring up on line.

Thanks for your time, technical assistance available as well.

# 1309. Playing with my PRC.

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-01-26 00:00:00 UTC
From: David Stinson <arc5@ix.netcom.com>
Message-ID: <6aihqi$lrv@sjx-ixn11.ix.netcom.com>
Source record: 111160

---
A large military radio collector's group was
recently working on a project acquiring PRC-47s.
There were lots of posts concerning PRCs
and what to do with them.
Being an incurable smartass,
I couldn't resist the temptation.
I wrote the attached little ditty and
a friend badgered me into re-posting here.
Thrown roses and bricks accepted with
equal good humor.
73 Dave
---

WHAT SHALL I DO WITH MY PRC?

I have a PRC,
but I never talk about my PRC in public like this.
I know it's a great pleasure to play with
your PRC, but you should do so behind closed doors.
And all those accessories you're talking about!
Sounds like they come from ads in the back of
strange magazines. And I don't think I want to plug
wires and speakers and things into my PRC.

After I handle my PRC,
shouldn't I at least wash my hands?

I understand lots of the guys are cleaning their
PRCs with things like scrubbing compounds and
cleaning fluid! I even heard that some
are PAINTING their PRCs! There's usually
someone else around who wants to use your PRC,
and they might be discouraged by OD-green paint.

And don't feel bad because your PRC is 47. I know
PRCs that are 68 and 74, and they are still firm
and strong after all those years of playing with them!
Remember: Your PRC is only as old as you think it is!

So enjoy your PRC! Just don't do it in front of anybody.
.....and wash your hands!

73 DE Dave Stinson AB5S

I am attempting to restore a modified BC348Q back to original
condition. To do this I need some Arrow Knobs, Phone jacks and
covers, and Antenna posts.
I would also like to see any published conversion information so that
I can restore the B+ and audio output circuits.
Please change nospam to buzzer in my return address.
Thank You,
Buzz

# 1321. WTB: Linear with 160 meters, 1/2 kW DC

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-01-26 00:00:00 UTC
From: "Arthur E. Sowers" <arthures@access5.digex.net>
Message-ID: <Pine.SUN.3.96.980126214544.28334C-100000@access5.digex.net>
Source record: 111172

I'd be interested in finding a linear which had 160 capability at the 1/2 kW DC input (1 kw pep) level.

As I recall, Drake had a L7 that was in this category (and had 80-10 too).

I can't remember if any other mfgr had this frequency range. Some new amps have 160-15 and that power level, but I don't want a new amp (or new price, either).

Art, W4PON

# 1322. FS Bendix RA-1B vintage HF receiver

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-01-26 00:00:00 UTC

# 1334. FS: Very Complete Drake Station

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-01-27 00:00:00 UTC
From: Jon Schmidt <schmidtj@ix.netcom.com>
Message-ID: <34CEA804.7878@ix.netcom.com>
Source record: 111036

Hello Gang,

I am selling my complete Drake Station, that I have assembled over the last 3 years. All equipment works as good as new and for the most part is loaded. I also have another C-Line that is in very nice condition that I would like to sell, please feel free to inquire if interested. Hereï¿½s what I have:

T-4XC Transmitter Serial Number-29704.
-DX Engineers LC-2-T4X Speech Processor.
-Brand new matched finals (180 Watts output).
-Spare set of NIB Matched Sylvania Finals.
-Final Amplifier Cooling Fan.
-Extra T/R Relay NIB
-New Main tuning dial insert .
-New blue dial light filters.
-160 Meter XTAL.
-Excellent condition.

R-4C Receiver Serial Number-29051
-1.5 kHz CW filter
-500 Hz CW filter
-250 Hz CW filter
-6 kHz AM filter
-Several Aux. XTALS
-New Main tuning dial insert .
-New blue dial light filters.
-Excellent condition.

L-4B Linear Amplifier Serial Number-5244
-Second owner. Amp has only 15 total hours on it since new.
-Complete re-build kit for the power supply including filter caps (not installed).
-2 Speed automatic cooling fan on power supply.
-Outstanding condition with plenty of output.

FS-4 Frequency Synthesizer Serial Number-XXXX
-Includes original Drake Cable.
-Outstanding condition.

C-4 Station Console Serial Number-443
-Includes Remote Antenna Switch.
-Includes rebuilt Station Power Module.
-Very Good Condition.

MN-2000 Transmatch Serial Number-7173
-Excellent Condition.

RFE-100 Digital Display Serial Number-0052
-Includes Adapters for C-Line
-Excellent Condition

AC-4 Power Supply Serial Number-60778
-Excellent condition.

MS-4 Speaker
-Excellent condition.

This station includes all of the original Drake cables. Includes original manuals for almost everything and good copies for the one or two items that I donï¿½t have manuals for. This station is very, very nice and is in beautiful shape. I have been using it for about a year and it runs like a champ with no problems of any kind. It is in outstanding overall condition with a few small scratches on the sides on a couple of cabinets. These scratches cannot be seen when the station is together. Chassis of all units are bright and shiney with no corrosion of any kind. I would MUCH prefer pick-up just to keep damage to a minimum. I would also MUCH prefer to sell the station as a unit but MIGHT consider splitting up if needed. I don't really want to sell this station, but I'm going to a new station and don't have room for it all!
I am asking $2800.00 for the entire station. Please phone or E-Mail with any questions.
Home number is 714-492-5262, or E-Mail is schmidtj@ix.netcom.com

Thanks and 73ï¿½s!

> ...Dave

It actually doesn't take much to be a better SSB receiver than a stock Mohawk or NC300 .. And a simple, easily reversible AGC mod (a la K7CMS) pretty much cures this significant ill of the 75A4 (AGC).

The 2B/C are respectable receivers, but they don't take up enough desk space and can be lifted with only one hand ;-)

Chris wrote:
>
> I would like to do all the mods available to my 75A4. If anyone has the

You really don't want to do this. Not "all the mods available" are a good thing. Some are down right destructive to receiver performance, not to mention value.

Unless you have a very early 75A4 there are only a couple of things that are worth doing. The first is to make sure your receiver does not have B+ applied to the filters. This is a relatively simple modification to install, and was standard out of the factory in all but the earliest. Given the current prices of 75A4 filters, you don't want to risk destroying one.

The second mod that is very worthwhile is the K7CMS AGC mod. Very simple. Makes the A4 a new receiver.

Unless you are a SKILLED technician, I'd avoid any of the modifications which change tube socket wiring and tube types. There are many of these mods floating around. A few are good. Most are not. All impact the value of your receiver. Badly done, they will unequivocally ruin an otherwise fine radio.

"All of the mods" are available in a "75A4 Compendium" from Electric Radio. You can get info from mailto:er@frontier.net.

## 1341. ID needed Military Modulator

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-01-27 00:00:00 UTC
From: KA7WOC <bern@whidbey.com>
Message-ID: <6amehm$cfs$1@news.whidbey.com>
Source record: 111043

I have a large (14"x20"x4" chassis) speech amp/modulator that I would appreciate help identifying. The amp uses a pair of 2A3s and the modulator uses 805s. The mod transformer is a Thordarson and appears to be in the 300 watt(?) range. There was a tag claiming this unit as working with a RC-52-A transmitter. Anyone know that rig or another designation for it. Would like as much info as I can get.
tnx

Source record: 111081
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.amateur.equipment

A friend is thinking of buying a used FT-757 GX. He's looking for feedback
as to their value, quality, features, etc.
I am not familiar with the Yaesu rigs, so I couldn't help him.
He likes the Kenwood TS-440S, TS-440SAT, and Icom IC-735 (but is having
trouble finding one in his price range).
Is the Yaesu FT-757 GX in the same class as these rigs?

Well, the 820S has digital readout, and is single conversion.
I replaced my Heath HW101 years ago with a 520. Wish I kept it. It
will probably be the last mint 520 I will ever see.
Anyway, I recently got an 820S and it is a nicer rig.

Hi Fellas;
I have for SALE:
(2) Emergency Beacon Corp. Model EBC-144jr, 2 meter FM transceivers, 144 to 148
no manual, one has 20 watts output and sounds fine and recieves fine, xmit is
8khz off and squelch does'nt seem operative. The second unit is untried, has a
few knobs missing but a few shields are unsoldered, ergo it is untried!
Uses any 1/4" stereo mike plug, Was this the first US(or anywhere) made
synthesized radio?
Has two sets of Thumbwheel switchs like "A & B" synthesizers.
These are kind off rare and are US made in around 1972 in New Rochelle, NY!
Price is $75 plus shipping from 11758.
Please do some more research as this is all the info that I have.
THANKS ES 73 RICH WA2RQY

# 1375. WWII Military Radio Technical History

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-01-27 00:00:00 UTC
From: Joe McElvenney <joemac@gto.net.om>
Message-ID: <VA.00000059.00724a68@gto.gto.net.om>
Source record: 111111

Hi,

My introduction to WWII surplus radio gear was in the early 50's in the UK when there was a considerable amount of the stuff available for an impecunious schoolboy to play around with. A deal of this was war stock, either 'Lease Lend' or that left behind when the 8th Air Force pulled out. The schematics of this equipment are today easily available but their design and production history, together with details of the engineers involved in the development, does not appear to be so. Over the years there has, however, been a certain amount on British equipment of the same period.

Are there any books in print, not just TM's, covering this aspect of boatanchors which include the developmental stories, anecdotes and personalities of US military radio and radar in the war years? Any information would be much appreciated.

As an aside, the last BC348 I saw was one that had been lifted from a French C47 that had crash into Chiradzulu in Malawi in the 60's shortly before I arrived there - (7Q7JO 1965-1975).

I got some octal socket savers from Fair Radio Sales in Lima, Ohio. Try them!
They have a web site too, but I can't remember the address. You will probably
find it with a search engine.

# 1379. matching transformer for SX-42 speaker

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-01-27 00:00:00 UTC
From: Phil Nelson <nospam.philn@accessone.com>
Message-ID: <6al8i7$p41$1@usenet76.supernews.com>
Source record: 111115

I just got my hands on a Hallicrafters SX-42, which
has speaker terminals for a couple of matching
transformers (500 and 5000 ohms). My question is
whether the quality of the transformer used will
make a significant difference in what I hear. I have
a fine old Electrovoice speaker to use with this rig,
and a big interest of mine in purchasing an SX-42
was to get something that sounded better than my
Hammarlund HQ-180AC. In the Antique Electronic
Supply catalog, I see various transformers that
seem usable, ranging in price from few bucks to a
few dozen $$. Just wondering whether it's worth spending
more, or if the difference wouldn't be noticeable.

Thanks!

Phil Nelson

> have one???

I was shocked (no pun) to discover that my DX-35 with a bad transformer needed 1200 VCT. It's because of the two rectifier, center tapped full wave bridge arrangement. I eventually used a ~600 volt transformer and a four diode bridge. (That did leave me with a bit of a problem cause the original design interrupted the center tap's path to ground when in STANDBY).

I hope you find an exact replacement, but if you don't mind replacing the 5Y3GT with four silicon diodes, this change will get you on the air.

# 1388. Replacing chokes with resistors in power supplies

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-01-27 00:00:00 UTC
From: davidb@scn.org
Message-ID: <EnGspw.9oH@scn.org>
Source record: 111124
Cross-posted to: rec.antiques.radio+phono,rec.radio.amateur.boatanchors

Reason I'm asking this is that I have a general-coverage HF receiver[0] which originally came with an external power supply, which was long missing[1] by the time I acquired it. I can get close enough to the top B+ voltage[2] by using a 120:220 voltage adapter transformer and a silicon full-wave bridge rectifier. (Everything in the AES catalog either has an insufficient current rating, or is criminally expensive. Even a low-end adapter transformer can handle 100 VA, which is plenty enough for my purposes and costs a fraction as much as an official "B+" transformer. Getting the "A" and "C" voltages is no problem so I'm not discussing them here.)

[0] Hammarlund SP-400-X in case you're interested.
[1] Yes, I've put out feelers for an original replacement, but haven't had any luck.
[2] 350 volts. I should be able to get 300 volts out of the arrangement above, and when the set is operated from a (large!) stack of B batteries, it made do with a B+ of 225v. So I think it should be plenty happy with 300.

I have the schematic for the original supply, which uses a multi-stage filter and draws out successively lower B voltages behind subsequent chokes. I plan on substituting power resistors for these chokes, and it would be nice to get a rough idea of what values I should initially try. I suppose I am going to have to experiment a bit, but it even a ballpark figure will help give me an idea of what values I should have handy before I start experimenting.

# 1392. Re: WWII Military Radio Technical History

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-01-28 00:00:00 UTC
From: Don Merz <71333.144@CompuServe.COM>
Message-ID: <eSyF3SBL9GA.302@ntdwwaaw.compuserve.com>
Source record: 110979

The Key sources for US military radio history are, in my opinion, the 3-volume set History of The US Signal Corps During WWII: The Challenge (V1), The Test (v2) and The Outcome (v3). Another great source is A History Of Science And Engineering In The Bell System. A lesser source is Men and Volts At War by Miller--this is a history of G.E. during the war.

The historical articles done by the Antique Wireless Association in the US and by Radio Bygones in the UK are also valuable. But there just aren't enough of them. Any many of them cite the basic references above in their footnotes.

The consumer magazines such as Radio News are generally not too useful because they usually discuss only the radio itself, not its ancestry, origin and developers.

Anyone have any other good sources for the History of specific military radio equipment and designs?

73, Don

# 1409. FS Swan 500

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-01-28 00:00:00 UTC
From: ajh1239@aol.com
Message-ID: <19980128061001.BAA25646@ladder02.news.aol.com>
Source record: 111053

Swan 500 w/AC power supply. Works perfectly with full output. The 500 has a rare 16 pole filter. The 500 is in very good condx. The AC supply does have some scratches and the speaker cone is gone (I use a Radio Shack speaker on top of the AC supply). There is a switchable fan for the 500 (sits on top) with the switch in the earphone jack from the AC supply. $225 plus shipping. John K6KOI

## 1410. FS: Argonaut 505

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-01-28 00:00:00 UTC
From: bharrison@earthlink.net
Message-ID: <bharrison-2801980045080001@1cust199.tnt17.tco2.da.uu.net>

One Ten-Tec model Argonaut 505 QRP transceiver CW/SSB 80-10 meters.
Includes original owner's manual, $195 and I'll ship US. It's in very
nice, working condx. Small, non-matching commercially made 12VDC PS
(4-6A) for $20
and free shipping as well if you buy the 505.

Source record: 111058

Hello,

I'm looking for any info/schematics for a WWII British Marconi B28 Receiver (http://www.mindspring.com/~johnmb/haida1a.htm), and a Canadian Marconi MSL5 Receiver (http://www.mindspring.com/~johnmb/haida2a.htm)....

or I might trade for US rxs... what have you?

My B28's front panel is painted a light greeen, as opposed to the medium blue looking front panel on the B28 on the HCMS Haida... Army model?

many thanks,

brian

WW-II era Unit RC-52 was:
RC-52* Air Raid Alert System, using BC-452 Xmtr,
1.5-7 MC, 50 W AM, 300 W CW,
2 Xtal-cont channels
Used with BK-27A, CD-867,RM-22

Does your unit have a "BC-xxx" number on it anywhere?

I keep forgetting to post this charter - I am sorry, when we formed
this group I promised to post this each month. I just saw Nick Englands
FAQ post that reminded me.

Rick K2XT

---

CHARTER: rec.radio.amateur.boatanchors

The newsgroup, rec.radio.amateur.boatanchors, is primarily for discussions
of topics related to classic amateur radio gear. Participation by others
who are not licensed radio amateurs are also welcome.

EQUIPMENT.
Appropriate equipment of the boatanchor category includes:
- equipment constructed primarily with vacuum tubes, not solid state
devices, and manufactured generally in the post WW II-to-1970 timeframe.
- transmitters (amateur, military, home made)
- receivers (amateur, SWL, military, home made)
- station accessories (keys, bugs, microphones)
- test equipment from the boatanchor era used in the repair and restoration
of boatanchors, such as scopes, af and rf generators, meters of all kinds,
etc.)
- parts and techniques used in construction of boatanchors (vacuum tubes,
condensers, etc.)

TOPICS.
Topics regarding the above equipment built entirely or primarily with vacuum
tubes (as opposed to solid state devices) are welcomed in this newsgroup.
Suitable boatanchor topics may include :
- collecting
- modifying
- tuning
- obtaining parts (specific requests for parts/equipment are permitted)
- manuals and TM (tech manuals) copies exchange
- restoration and refinishing
- values of boatanchor gear
- sources for parts
- questions and advice for others
- Morse Code operation - advice, legends and lore
- Modes of operation: CW, AM, early SSB
- manufacturing during the boatanchor era, including companies, personalities,
and manufacturing techniques
- design and engineering history of equipment of the boatanchor era and
comparisons to prior technology (arc- and spark-gap transmitters,

Alexanderson alternators, galena detectors, magnetrons, Nixies, quartz crystals).
- other subjects of a historical nature
- commercial postings, if SPECIFICALLY offering products and services DIRECTLY relating to boatanchor collecting.

OFF CHARTER TOPICS.
The following subjects are off topic in this newsgroup:
- discussions of hi-fi, stereo, and/or broadcast receivers. (use rec.antiques.radio+phono and rec.audio.tubes newsgroups)
- antique equipment (use rec.antiques.radio+phono)
- entertainment television receivers
- cross postings from rec.radio.swap
- discussions that are more appropriately held in other rec.radio.amateur newsgroups, such as code vs no-code
- off-topic commercial postings are specifically prohibited from the newsgroup

FAQ.
- A list of Frequently Asked Questions will be developed by volunteers in the newsgroup and will be posted monthly. This FAQ will be helpful to beginers as well as first time visitors to the newsgroup. The FAQ will contain a list of commercial vendors who specialize in products and services of value to boatanchor collectors.

Needs the inductor select switch installed. It is a brand new CentraLabs 9kV 17 position ceramic rotary switch. Also you will need to wind a new coil out of #8 ground wire. The original coil and switch were used in an amplifier. This has the dual forward and reflected power meters. 200 watts dummy load. ant select switch. etc. etc. 4500 volt 250pF air variables. Price is $125.00 including the brand new switch. You cover UPs from san diego zip 92139.

Have Johnson Pacemaker TX and Johnson Thunderbolt AMP.
I need to build a control cable to run between them. The
Pacemaker and Thunderbolt both have a 4-pin jack on the
back panel. The control cable runs between the 4-pin jack
on the back of the amp to a 9-pin octal on the back of the
Pacemaker. I have found a 9-pin plug for the Pacemaker
but need a 4-pin plug for the Thunderbolt.
A picture of the back of the Johnson showing the 4-pin jack is at
http://members.aol.com/wr0s/wanted.html
Thanks.

Date: 1998-01-29 00:00:00 UTC
From: l.mclaughlin@popmail.csuohio.edu
Message-ID: <6aoqct$74g$1@csu-b.csuohio.edu>
Source record: 110995

TELECTRO STEREO TUBE POWERED REEL TO REEL

Apparently has dual separate internal amps. Each amp has
an "On"

Plays and rewinds however it has one problem. The right
amplifier does not work. I don't wish to waste the time to
take it apart and check the tubes.

The interior is fair to good. The case is okay, but has
pitting/mild rust on the chrome part from sitting in a humid
musty cellar at some point during its life. The stereo spkr
grilles on either side of the unit are fine. They might be
aluminum or some other non-ferrous metal.

If you want a quality inexpensive reel to reel tube portable
if you are a bit handy--this is it.

Have photos to email if you're interested. $35 "AS IS"

# 1453. CX time: RS-6 (rr6) Plug AND knob needed

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-01-29 00:00:00 UTC
From: marty@netstogie.com
Message-ID: <6aorft$ie4$1@cssun.mathcs.emory.edu>
Source record: 110996

CX time. I try something different every event. This time I want to bring Dr. Bob Milledge outa hibernation with a RS-6 set. Dr. Bob's call is AA4CX

I have the worst RS6 there is. It's missing the RX plug and the knob on the power supply (rp6) and the tx (rt6). The cases look like they were dragged behind a newlywed couple's car.

But they work OK & the prospect of Dr. Bob playing a Mittyesque downed B47 radio op is just too much for the man.

And this is also a backhanded way to put one of these unheard 'spy radios*' on the air for a few hours.

Tks,

Marty

CRUDE PIX

> justice and mercy." -- Wendell Berry

You have a MUCH more serious problem here than what to do about the
chokes. The problem is the transformer. Most 120 to 240 Volt
adapters are autotransformers. That means that there is no isolation
between the input and output. They do this because they can get about
twice as much power out of the same core and winding than with an
isolated winding design. That is why they are so much cheaper. If
you use one of these transformers with a full wave bridge rectifier,
you will place the chassis of your radio at a high voltage (even if
you reverse the plug). You need to use a proper transformer with
isolation between the primary and secondary. If you can't find one
surplus or at a ham fest, you might try hanging around a scrap metal
yard. Industrial control transformers usually have isolated windings
and you just might find one with appropriate ratings. Then again, you
might not.

Good luck,

Jim Mueller
deadmen@stairnot.com

The stated return address is incorrect to reduce the amount of junk e-mail I
receive. To get the valid return address, replace "deadmen" with "dadoman"
and "stairnot" with "azstarnet".

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-01-29 00:00:00 UTC
From: jimru146@aol.com
Message-ID: <19980129125601.HAA03776@ladder02.news.aol.com>
Source record: 111007

For sale Johnson Desk Kilowatt in good to excellent original condition. Same condition as obtained from original owner.
Desk in good condition. The top and desk shows signs of normal wear in a well cared for environment. Top has usual indents from anything placed on this type of surface, but is 100% complete with no holes or wear through, looks good. Desk overall looks good. Only part that shows any sign of wear is the the cover for the control panel, from inserting it in it's holder, very minor. No rust, dents or other defects.
Transmitter is in in very good to excellent condition. All original components including finals. Overall looks very very good.
Price is $3500. I will take Collins gear in trade.
I have had this xmitter 2 years and have no time to use it. I also have no time for tire kickers, please understand. This is a very rare item and I will not lose any sleep if it stays.
Thanks for reading this post.

# 1467. WTB: Unbuilt Kits

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-01-29 00:00:00 UTC
From: nick@cs.unc.edu
Message-ID: <6apvpl$mbh@altair.cs.unc.edu>
Source record: 111010

WANTED - unbuilt vintage ham radio kits from Heath,
Eico, Knight, Johnson, WRL, etc.

I'm not a speculator or dealer, just someone who has a passion for
kits - fueled by great memories of building kits in the early 60's.

Kit building got me into ham radio, and that led to a succeessful career
in electronics so now I can afford to pay top dollar for kits
I only drooled over as a kid.

Since I clearly have more money than sense, I'll even pay a finder's fee
for info leading to a kit. Will pay $100 for info leading
to acquisition of an unbuilt SB-100, SB-101, SB-102, Mohawk, Warrior,
AT-1, DX-20, DX-35, DX-40, or other interesting rig.

Oh yeah, I'm also looking for vintage tube-type hi-fi kits too -
from Heath, Eico, Knight, Scott, Fisher, Dynaco, etc.

73 & most of all, Have Fun,
Nick KD4CPL

Manual copies for the BC-348-Q (and the other models),
which is the same design as the "-J" model, are available
from Fair Radio Sales (419)227-6573 or
from W7FG Manuals 1-800-807-6146 (good guy).

Fair also has the alignment manual,
which is listed as AN/ARR-11.
I highly recommend it.

Good Luck OM DE Dave AB5S

# 1472. Funny R-390A Noise

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-01-29 00:00:00 UTC
From: lessig1@csrlink.net
Message-ID: <6aq3ho$ai9$1@pigpen.csrlink.net>
Source record: 111015

I have a Stewart Warner R-390A receiver (GREAT radio!) made in 1960 (Order # 20139-PC-60, ser. # 835). Lately, I've been noticing something strange. When the radio's set in the off, standby, AGC (turned WAY down), MGC (also turned WAY down) or calibrate position (yes, that's all of 'em) the radio emits a VERY FAINT high-pitched whine. It kinda sounds like the sound your brakes make when the shoes wear down to the metal.

When the radio's unplugged, the sound stops. Also, fiddling with any of the controls seems to make it stop for a second or two. Does anyone know what ails my radio?

Thanks in andvance for your responses, and 73's!!!

Bill Tobin

Source record: 111016

Hi. I have a JV Ranger II for sale. It's in perfect operating condition, and looks very nice. The front panel has a few scratches (about three) and some light scuffing around the edge. A previous owner touched up the paint around the top edge of the front panel; not too noticeable unless you're looking for it. The meter face is a reproduction, but very good; you probably wouldn't notice it if you didn't' know. All original knobs, VFO dial is excellent. The case is very good; a few scratches, and someone drilled two small, neat tuning holes in the top. Includes manual; it's a copy, but a very good one, including schematics. I'll also include a spare final amp tube (6146A). This rig was recently partially re-capped and re-tubed. All in all, the transmitter is an "8.5" cosmetically, and a "10" operationally. $245 plus shipping from the DC area. I'll post a picture this evening at

http://members.aol.com/MikeW26532/ranger.jpg

Email if interested. Thanks.

# 1475. Heath HW101 problem - HP23B keeps tripping off

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-01-29 00:00:00 UTC
From: jwg6@cornell.edu
Message-ID: <jwg6-2901981107540001@cu-dialup-0818.cit.cornell.edu>
Source record: 111018

I have a HW101 powered by a HP23B pwr supply. Problem is, often when I am tuning up w/ dummy load, once the rig is near max. input to final, the pwr. supply trips off.

This is rather frustrating, as sometimes it will drop out mid-transmission as well!

The rig was recently checked out & overhauled by a Heath tech, and works fine otherwise.

As this is an intermittent problem with a popular pwr supply, I wonder if anyone could offer a suggestion as to the cause or remedy.

thanks/73

Joel

# 1476. Re: Where to buy Socket Savers?

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-01-29 00:00:00 UTC
From: "John M. Franke" <j.m.franke@larc.nasa.gov>
Message-ID: <34D0BAA7.70BA@larc.nasa.gov>
Source record: 111019
Cross-posted to: rec.antiques.radio+phono,rec.audio.tubes,rec.radio.amateur.boatanchors

Socket savers are basically a matching plug and socket. Once inserted in the original socket, the new socket receives all the wear and tear of insertions and withdrawals. When the new socket wears out, the entire socket saver is removed (pulled out) and a new one is inserted in its place. Thus the permanent socket undergoes less wear and tear and when the saver wears out, it is easily replaced.

Could be alot of things but most likely

1. circuit breaker is defective. Put an ammeter or amprobe on the primary and see if the current draw exceeds the rating of the breaker.

2. the high voltage caps may be defective and will tend to draw additional current. Hard to confirm because they my test good on a cap tester and breakdown at high load

3. not likely in a tube rig,but are you overloading finals (loading too heavy so you put out a few watts additional. On an HW101, max power output should be no more than 125 on 80 meters.

hopes this helps

David,

I have owned the Yaesu FT-757GX and FC-757AT for 5 years and can tell you
that it is a very capable and sturdy radio. I do have the GX Operating
Manual and the AT Instruction manual. I also have the wiring diagrams
for the rig. If I can answer any specific questions, I try my best.

I am selling some of the items I am no longer using. The address below each item is a hot link to a picture of it.

The buyer will pay by cashiers check or money order. Please see my very high integrity rating on eBay.

I will not ship the items outside the US.

Thank you for taking the time to read this.

Bill

Index Laboratories QRP Plus

160-10 meter CW/SSB transceiver. This is the latest (last) version they sold. It has never been used in the field and has been used on the bench less than 1 hour. It has a built in keyer and audio filter.

It will come in its original box.

This is the best QRP rig ever made. The original cost was $695 (brochure included). I will sell it for $525

http://www.halcyon.com/pub/users/bill/qrp-fnt.jpg

Gold Plated Hand Key

This key was made by Wm. M. Nye Co. It is new in the box. It is one of the best looking hand keys I have ever seen. It is gold plated and has a black crinkle base.

Very few of these keys were made. This one was made for Icom to be used a presentation item.

It has a great feel and is very smooth.

You will be proud to have this key in your shack.

$55

http://www.halcyon.com/pub/users/bill/key.jpg

Heathkit CW Keyboard

Heathkit HD-8999 CW Keyboard. It has memories, sidetone, type ahead buffer, and sidetone. This is probably the best self contained CW keyboard ever made. It comes with a non-original power cube. Instructions for use are silk-screened on the bottom of the keyboard.

$100

http://www.halcyon.com/pub/users/bill/kbd.jpg

Audio Filter

SMART FILTER by Modular Systems. This is the best microprocessor controlled switched capacity audio filter I have ever used. Comes with a manual and power cube.

$55

http://www.halcyon.com/pub/users/bill/af-1.jpg

Alinco DR-599 T/E Radio

This is a 2-meter and 440 MHz mobile with remote control head. Control head can also be mounted directly on the radio. 45 watts out on VHF and 35 watts out on UHF. Has manual.

$220

# 1499. WTF: Manual for AR-77, Meter for Heath Novice Rig, WW2 radios.

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-01-30 00:00:00 UTC
From: w5jv@juno.COM
Message-ID: <19980129.220323.12270.7.w5jv@juno.com>
Source record: 110951

GE to all,

1. Has anyone any documentation, users manual, maintenance manual, etc. for the RCA AR-77? If you have and would have time before next Christmas to run some photocopies for me, I would much appreciate the service. Can reimburse, furnish some parts, otherwise copy manuals that I have for you. State interests or needs in reply. Also would like to find out what the matching speaker looked like.

2. Help needed finding a replacement meter for the HX-11 Heath Novice xmtr. Same size as the DX-35 or 40. THe meter scale reads 0 - 200 on top, 0 - 8 on bottom in Milliamperes. The movement is marked: FS 3 ma; R=500 ohm. Size and type is the clear plastic mostly square 2 3/8" high X 2 3/4" wide meter. If you have something that will work, advise on your requirements or trade interests.

3. Wanted: WW2 receivers, parts units, National Co. and Millen transmitters, British HF receivers.

Thanks in advance to the group.

73, Doug W5JV

Hello John,

That's a heterodyne frequency meter of the LM series, used by the US Navy. There should be a calibration book in a spring clip arrangement underneath the outer case (it slides out the front). The cal book tells what frequency the vernier dial is tuned to, and the books were individually made up for each meter. A nameplate with the exact model (LM-10, LM-20, etc.) is usually mounted on the top surface of the outer case. Power requirements are approximately 12 volts AC or DC for the heaters, and 250 volts DC for the B+ - but it depends on the model, and whether a previous owner has rewired the heaters.

These units are sometimes considered the Navy version of the BC-221 frequency meter.

Basically, the unit consists of four parts:

1) A precision tunable oscillator tuning 125 to 400 kc. (LOW range) or 2000 to 4000 kc. (HIGH range)

2) A 1000 kc. crystal oscillator, to check dial calibration

3) A mixer stage that permits hearing beatnotes

4) An audio amplifier to drive headphones. Some models also have the ability to use this stage to modulate the tunable oscillator.

Functions 2 and 3 are usually done by a single multipurpose tube. The neon bulbs are used as voltage regulators. Usable rangeis at least 125 kc. to 20,000 kc.

Some of the above varies slightly, depending on the model.

Do you have the calibration book, and the outer case with the nameplate? Email me if you need more info. I have three of them - the best one is a near-mint LM-20.

It is an LM Heterodyne Frequency Meter. It covers from 125kHz to 20Mhz using harmonics of either the low range or the high range. It is both a signal generator and a signal monitor. It has the provision for internal tone modulation of the signal. They were very popular in the 50's and 60's and are still used by some people today. It has an internal crystal reference for calibration checking. Did you get the calibration chart/boklett with it?

I have a collectors quality RME 45 with speaker f/s. This radio has
been 100% restored both inside and outside. Looks brand new!!!!! NO
JOKE It works great and I can't say enough good about it. Only
reason that it is for sale is that I have to many GC receivers
and one must go....Price $500.00 plus shipping and that is the bottom
line. Prefer p/up in Dallas but will ship. JPEG available to serious
buyer...73's Bob K1JNN/5

I'll sell you my KWM2A/RE/Waters/PM2 for $800.
Or swap for a Drake R7 (A or 'A' equipped) or
nice TR7A/PS7 (clean, sticky paint O.K. if you've
some goodies like speaker or phone patch with it)

Almost swapped this for a TR7A except the TR7A was TOO
nice to use. Seller said Drake wanted to buy it as it
was the best they had seen. No sense squandering a museum piece
in MY shack, so I passed. Just didn't feel right using a
"perfect" radio.

Source record: 110959

WILCOX-GAY RECORDIO (Recordio not a spelling mistake) MODEL 3F.10 Reel to Reel Mono TUBE PORTABLE. Full-sized very old (early 1950's??) portable that handles 7 inch reels. Has the 1950's styling.

Made by Wilcox-Gay of Charlotte, Mich./Brooklyn, New York.

The unit is in fair condition and would be better if given some TLC. The leather handle is missing, but metal cabinet mounts are still there. The plug-in power cord is missing, so I am totally unable to test it. The unit is sold "as is." $25 or b/o plus shipping. Pack it free.

Hi Steve and everyone--

I bought one in pretty good condition at the last ham flea market for
$25! The cabinet is about a 9 and it works and lights up . . . altho
no all components inside are original (electroytics were replace with
substitutes) . . . and if you don't have access to an old Allied Catalog
take a look at one on our family's webpage:

I've got one of each -- the one without the roll chart has a few extra late-style (e.g. 10 pin) socket types instead. Perhaps that was the later model, retooled to work with base styles that came out after the original 667...

Source record: 110971

Hi,

Does anyone have any information like the manual that came with it, for the Swan Cygnet 260 Single Sideband Transciever?

If you do, I'd like to either ask a question or two, or perhaps buy the manual or a copy of it. Need in particular, tube lay out and tuning (as in repair) instructions. I have some info on this unit, but need the rest. The rig isn't performing well at all, and the info I have isn't enough to finish the job, if it can be done at all.

Please reply directly to me, as I don't get to read the N.G.s all the time.

Any help appreciated.

Thanks,

Lou

I'm looking for the matching speaker to a beautiful Hallicrafters SX-130
that I just acquired. The model is R-50 or R-51 (the 51 also has a
built-in clock). Will gladly pay a fine price for either speaker!

Thanks in advance,

Doug Clapp
dclapp@mr.net

# 1526. R-4B Question (Drake)

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-01-31 00:00:00 UTC
From: avitko@earthlink.net
Message-ID: <886283377.1771831307@dejanews.com>
Source record: 110834
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.amateur

Question for those familiar with the Drake R-4B:

I have a Drake R-4B receiver that has not been used for a while. It appears to work, but I am noticing a quirk and am trying to find out if the anomoly is in the way it was designed or if it has developed a problem.

The problem is that the radio can receive the same signal at two points on the tuning dial 100 KHz apart. For instance, if I tune in a station at 3.7 MHz, I can hear the same station if I retune down to 3.6 MHz. This problem occurs on all bands and can be very annoying if the signals are strong. It gets worse on the higher frequency bands where the preselector tuning is not as sharp. You can only hear it 100 KHz lower, but not higher (no signal at 3.8 MHz in the above example).

Continuing with the 80M example, if the 3.7 MHz signal is not too strong and there is another signal at 3.6 MHz, adjustment of the preselector minimizes the 3.7 MHz signal and maximizes the 3.6 MHz... However, you can still hear a noticeable heterodyne at times.

I do not have the manual for the receiver, but I notice there are some I.F. cans maked 50 KHz, so the final I.F. must be at this frequency. I would assume the unit is triple conversion.

With a 50 KHz I.F. it seems feasible to receive an image 100 KHz away, but would Drake design a receiver with this kind of limitation or does mine just have a problem? I was also wondering if there might be a fractured crystal filter somewhere that is letting the image through.

Can anyone who has used a R-4B shed some light on this problem?

Thanks, Al

What I find works well (since R/S dropped the product) is the larger aircraft fabric thread. Its the right size and its tough as H#$$! Check out Aircraft Spruce Corp. ( they ad in Trade-a-Plane, etc) and maybe on the net. Additionally, I'm told that sailmakers thread will do fine, too.

# 1533. FS Marconi R1155 parts

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-01-31 00:00:00 UTC
From: Larry Asp <larry.asp@sympatico.ca>
Message-ID: <34D3DC66.3313@sympatico.ca>
Source record: 110841

FS Marconi R1155 Parts set. These radios were used in British military aircraft, and had a very nice 250/1 vernier dial. This set is good for parts only, the dial is there, and a right angle drive under the chassis is a bit of a bonus. Still has some tubes, and IF transformers as well. The front panel is beyond redemption other than for the vernier and tuning dial. Asking $10.00 plus postage, which would be between $14 and 20.00 depending on where you are relative to Southern Ontario.

You have a LM frequency meter - it is not much use unless you have the book that goes with it. The book give the frequency at the various dial settings. I guess if you had a good freq counter you could make up a table. As best I remember it covers up to 18 MHz. I don't remember the lower end. It was used in aircraft, up to and including the PV2 in the 60's. Hope it helps. I have used the LM from the 40's to the P2V in the mid 60's.

One thing to consider here might be the following question:

If Drake (Collins, Hallicrafters....) were still making radios with vacuum tubes, what would the engineers do today when they needed to do an engineering change due to limited supplies of a particular part? (Eg: Substitute a 6EW6 for the 6HS6 and swap the connections to pins 2 and 7)

At what point does a radio become a museum piece, which must be preserved in its original configuration and, possibly like the aircraft in the Smithsonian, never used?

From: n2ey@aol.com
Message-ID: <19980131015300.UAA02316@ladder03.news.aol.com>
Source record: 110891

Here's what the TS-520S and TS-820S have in common:

- 160, 80, 40, 20, 15 & 10 meters, but no WARC bands
- Solid state except 12BY7 driver and two 6146 final tubes
- 100+ watts output, CW/SSB, speech processor, optional filters
- AGC can be turned off
- optional DC-DC converter for 12VDC transmit operation (bolts on rear of rig)
- complete in one box - no external power supply
- late '70s to early '80s vintage
- matching outboard VFOs available (VFO-520 & VFO-820)
- Very good overall radio performance - the '520 was more popular, probably because of its lower price. ($600 vs $850 range)
- No memories, no computer interface, no QSK.

Here's where they're different:

-TS-520S uses dual conversion scheme with tunable first IF - frequencies used are the same as Heath SB-100 and HW-100 and their descendants. TS-820S uses single conversion with PLL/VCO system. Better receiver performance, but much more complex.

-TS-820S has built in digital readout - TS-520S has optional DG-5 readout that sat on top of rig ($180 option!) The DG-5 is rare and almost always found as a package with a '520

-TS-820S has built-in passband tuning (also called IF shift) and noise blanker. TS-520S has neither.

-Matching receiver R-820 was built for the TS-820S - no matching rx for the '520

-TS-820S is bigger (deeper) and heavier.

Both are really good rigs. The main questions are the price and condition, and how much do the digital readout and other features matter to you.

Hope this helps. Email for more info if needed.

Source record: 110896

Thanks for your concern. It's not every time I tune up the rig that I have to take 30 seconds, but when the antenna tuner (inconveniently located across the room (on the outside wall - above the washing machine)) needs some special tweaking on an unusual freq., sometimes things run a little long. So when I get to "25" in my thirty second
count I leap back across the laundry room/shack to give the rig a break before I try again.

Just doing the best I can with what I got.

73, Mike, KE9EX

For British military equipment, an excellent book for technical detail, developmental history and lots of pictures is Louis Meulstee's Wireless for the Warrior. Only Vol 1 is out so far covering Wireless Sets Nos 1-88 - however the common sets, WS19, WS62 etc are only given a very brief summary of their characteristics. Vol.2 is due in the next few months, and will cover the common sets in lots more detail.

What the book does lack is reports by users of the equipment in the field - it is basically a colation of the remaining technical and developmental data that can still be found. I would find data on the actual performance when used in anger, interesting, but of course that is much more difficult to get these days, when most of the operators have either died, or have very hazy memories.

Email for details of publisher if interested.

Source record: 110904

Hello Mike,

You might try running a piece of two conductor wire (speaker wire would be fine) from the rig to the antenna tuner, with a single pole switch at the tuner and the other end connected across the key. That way, you could key the rig (for tuning purposes) from the tuner location, and save the rig. The 2 conductor cable carries only DC (about 100 volts at a few mils).

I have the following Radio, and electronic equipment for sale. Reasonable offers or trades for radio and High End computer EQ. will be considered. All working last time tested unless noted. Shipping is extra.
Thanks

• Tempo-1- Tube type Ham Transceiver/with Power Supply 80-10 meters. Looks good and works well. 100W output. $200

. Motorola VHF Transceiver All tube Model: PA8270J SER.NO: 8697. It receives on 150.750 & 150.570 and transmits on 160.025. There is also a tone Signal and intercom control on front below speaker. This is the type transceiver that was used by police and fire dispatchers in the past.
Don't know if it works. $100

• Grubndig Model 2066 AM/FM/SW all tube receiver. Nice wood cabinet. It isn't working. $75

• Heathkit HW 101, 80-10 meter transceiver. No Power supply. It is receiving, but don't know about transmit. Not able to test. Looks are 7/10. As is $100.

• Siltronix VFO Model 80. $75

• National Two/Seventy Ham Receiver with 6 Meter band. All Tube with matching speaker $225.

• National NC 188 Receiver. It looks good and all together, but not receiving. On looks I would say 7/10. I will ship it to you for $75

• Hallicrafters Model S-108 SW Receiver with a calb. Ham band spread. Looks good works well.$100

• MFJ Rtty/CW Computer Interface Model MFJ-1224, used for copying code from the radio to your computer. $50

• Pearce Simpson, Guardian 23- All tube CB Transceiver/with mobil power cord and mounting bracket. Looks and works Good. $125

• Traynor, Group Two B- Audio Amp Head. High/ Low mic. in puts. Master volume, volume, bass, treble and tone shaper controls. $150

• Channel Master- Tube Stereo Receiver (Model 6612) and matching amp (Model 6601) Looks good and plays on FM. AM not working. $150

• Sams CB Photofact- Several volumes, some continuos: numbers as follow: Continuos 1- 55 and 57- 65. Individual 70,72,80,88,93,98,104,120,122,128 178,190,226. Also have some two of same number. $4 each. Special discount price for all.

• AR Inc.- Stereo Amp, all solid state. $125

• Yashica Eletro 35- 35MM Camera with Telephoto 1:4 , Wide Angle 1:4 ,Tele-wide finder lense and flash attachment. $100.

# 1565. Re: Anyone tried to repaint "black wrinkle" finish?

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-01-31 00:00:00 UTC
From: sparkes@fast.net
Message-ID: <6avct0$3c3$1@news1.fast.net>
Source record: 110908

Krylon makes a black wrinkle finish spray paint that I have used to repaint some worn knobs on a BC-348.
It worked very well. An incandescent lamp's heat can be used to accelerate the wrinkling. I did not buy
the paint myself. I got it from the fellow who sold me the BC-348. I don't know how difficult it is to obtain.
Hope this helps.

73,
Ned Parkes - N3LKT

Please respond with price and condition.

Thanks Harry NK9R

# 1567. FS: Heath HG-10B

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-01-31 00:00:00 UTC
From: n3ab@fast.net
Message-ID: <34d34a37.468023@news.fast.net>
Source record: 110910

For sale: Heath HG-10B VFO. Front panel in very good condition. The cover has some scratches on the edges, and judging from the color of the cover, it may have come from a older model HG-10. It's not that bad looking, but you may want to respray the cover for a closer match to the HW-16, DX-60B series, etc. No manual. I have no idea on the operating condition as I have no rig to test it with. In any case, I'm asking $50.00 (shipped to lower 48). Please e-mail me if interested. Thanks.

Am restoring an old beauty and am looking for the following
1. One main tuning/bandspread knob. Looks like the same knob used in
many
50's and 60's Nationals. Gray with a flat silver circle insert
2. Front panel switch for phono.
3. Main tuning dial.....Caution do not try and clean it with
Windex.....sob
sob
4. Speaker.

Hi all,

I'd like to fill in the gap between my two oldest Handbooks (1936 and 1942) by finding a 1939 copy. I'm willing to buy one straight out, and I also have some trade fodder: a copy of Terman's Radio Engineer's Handbook (VG condition), a 9th ed. (1942) E&E Radio Handbook (cover F-G, inside VG), and a 1966 ARRL Handbook (VG). Hope somebody can help me out! Thanks.

Hi all,
I'm looking for a copy of the manual or schematic for this Japanese "BA".
It's
a 3.5 to 30 MHz preselector, on a gray crackle case. The two tubes, 7 pin
minatures, are missing. No legend on the chassis as to type.
If anyone can help, please e-mail me at smurph555@aol.com

>Nobody out there quite THAT stupid?

Seems to me...if you're not ashamed of the things you say when posting to this and other newsgroups, you would use your REAL name and email address.

I don't mind you stating your opinions about pricing, but I think the world should know who you are. Being the price police is okay, but why are you hiding behind a phony email address (somebody@somewhere.com)? Do you think it makes you invisible or anonymous so you can say things without having to defend them??

My point is, if you have something to say...be a man, take a stand, say what you want to say and then stand by it. Don't hide. Use your REAL name and email address and let people respond to you.

As an Internet Service Provider, it was easy for me to track down exactly who you are and where you're located (can't hide anymore...;). So, if you continue to post under your alias name, I will tell the world who you really are.

Source record: 110784

This transmitter has 100 watts output, VFO and built in scope for monitoring your signal. Its a real classic BA. Cosmetically, very clean but it has two problems.

1. Works on all bands but 20 meters
2. Spring broken in VFO. This is a circular spring which creates friction to rotate the variable cap so without this spring the xmitter will not tune. Have the original spring which can be welded or copied.

Sold as-is pick up only on Long Island. $125

Try plastic coated steel leader in 30-50 lb test. It comes in 30 foot
lengths or so. It isn't apt to stretch as would monofilament line.
This has been used by some folks and in some Collins prod equipment.
You can also get clips to use with this leader to form an end tie.
Good Luck, W0BVR

I have had for many years a PILOT Cat. No. K-111 ABC Eliminator for AC Tubes manufactured by the Pilot Radio and Tube Corporation of Brooklyn NY. Input is 110V. Output is 220v at 60 mills. By looking at the inside terminals, there are ones labeled 220+, 180+, 135+, 90+, 5, 6, B- and 45+, 4, 3, 2, 1 and line (2). It is 9" by 7" by 3.5" in size.

Does anyone have an idea of what this was used for? I got it at the same time as I acquired several Collins pieces approximately 15 years ago.

It was for running old battery sets on mains current. In other words
a power supply. Still in some demand by collectors of old battery sets.
It supplies voltages in place of the "C" battery, the "B" battery, and
the "A" battery. Thus the name ABC. If you don't have any use for it, I do.
Does it work? How much would you want for it?
Thanks Gary gpewitt@execpc.com

# 1601. Re: Help: Pilot ABC Eliminator

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-02-01 00:00:00 UTC
From: "John M. Franke" <j.m.franke@larc.nasa.gov>
Message-ID: <34D4B5A2.3FB0@larc.nasa.gov>
Source record: 110799

Lookin at one of my walls at work, I see the schematic of a Pilot A.C. Super-Wasp receiver with a K-111 ABC Power Pack for the power supply. The Super-Wasp had four tubes: '24 RF amp, '27 regenerative detector, '27 first audio, and a '27 audio output. it used the 2.5VAC, 45VDC, 90VDC, 135VDC and 180VDC from the K-111. At the bottom of the schematic it reads "PILOT K-111 POWER PACK IS IDEALLY SUITED FOR THIS SET."
The nubers refer to transformer windings. 1 & 2 are one filament winding, 3 & 4 are another (2.5VAC), and 5 & 6 are yet another winding. My schematic only gives the filament voltage at terminals 3 & 4. The B- appears to be floating, the Super-Wasp receiver connects it to chassis ground.
The 220VDC is taken from between the chokes. The 180VDC is connected to the last choke. All other DC voltages come off a divider resistor between the 180VDC point and B-. More data if you want.

Hope this helps,

John

This was used to eliminate the need for batteries in the early days of radio. The unit is simply a power supply that provides A (filament), B (plate), and C (grid bias) voltages from the AC line, instead of using multiple batteries which was once the common method.

## 1603. 4-1000 amplifier question

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-02-01 00:00:00 UTC
From: k8gm@aol.com
Message-ID: <19980201185701.NAA13055@ladder03.news.aol.com>
Source record: 110801

I have built a singe 4-1000 amp for 20 meters. The amp works and puts out about 1400 watts but the input SWR is high about 4 to 1. I have no tuned input network. Has anyone had experience with this tube? Will a simple parallel tuned circuit do it or do I need a PI network, or how about a broadband toroid type transformer?
Would like to discuss with someone who has built one, component values etc.

Hi gang,

I have an AR88D and my belief is that the "D" stands for "desk". In other words it is in a desk cabinet.

>--

Hi David,

I bought my 757GX many years ago and went through the same analysis
your buddy seems to be doing. In very many respoects the 757GX is in
the same 'class' as the TS-440 and IC-735. In fact those were the
three radios that made my final list. I chose the 757 primarily
because I do a lot (at least I did then) of rtty/amtor etc and the 757
has a 100% duty cycle defined as full power, key down for 30 minutes.
At least that's how I remember it. About the only thing I don't like
is the tuning increments. It can take forever to tune large segments
of the band but that is really more of a convenience than anything
else. I didn't lilke the front panel of the 735...the plastic cover
is too easily scratched (seeing IC-735 units at hamfests bears me out
on this). As I recall the 440 was somewhat more expensive than the
757 at the time although, as I said, the primary reason was the duty
cycle of the 757. I still have the owners manual. Is there something
I can look up for you/him?

Source record: 110804

Many references state that the input impedance of cathode-driven
(grounded grid) amps will vary with coax length between exciter and
amp if the input circuit is untuned.
So that's fundamentally the problem--you're right!
All you need is a simple high-capacitance pi network. The toroidal
transformer isn't the solution, because the fundamental problem isn't
impedance mismatch...it's that the impedance *varies* with driving
voltage, from maybe around 200ohms at positive voltage peaks to
infinity at all negative driving voltages. The tuned input circuit,
even with low Q, supplies the "missing half" of the cycle and makes
the input impedance to the exciter more constant over a cycle.
And it isn't the 4-1000...it's any cathode-driven circuit!

I found some dial cord at Antique Electronics in Tempe, Ariz., and I use it on the bandswitch of a 75A2. Fishing line that may have a a metal core also has been recommended, but I haven't tried it yet.

Incidentally, GC Electronics, which made dial cord for many years, tells me the no longer make it.

# 1613. Help! Valiant misbehaving during CX!!

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-02-01 00:00:00 UTC
From: bry@REMOVETHIS.mnsinc.com
Message-ID: <34d4f214.43905814@news.mnsinc.com>
Source record: 110811

Hi guys! Any chance of your using a little expertise to help here?

I am stuck with an annoying problem in my Valiant and had to shut
down CX operation until I can figure it out!

I hear a POP! sound about every 10-15 seconds when the rig is
thrown into TRANSMIT, and the plate current will increase and then
slowly climb back down to quiescent current of 10 mA unkeyed.

Plat ecurrent will surge to about 400-500 mA and then quickly drop
back to normal 10 mA!

It will also happen when I am transmitting AM or CW. A POP occurs and
the plate current (and power out) will kinda surge to a high level
and then drop back. Happens more and more often now.

It used to happen every 30-40 seconds. Now it's about every 10-20
seconds. I am afriad that a transformer or choke might be arcing
internally. I hav ereplaced all of the HV ELctrolytics recently and
that did not help or change anything.

I can't figure out WHAT is popping!
It sounds like an ARC but I can't see where!

The voltage on the hot end of R16 remains pretty constant. 790V DC
but on the other end and it is normally 140 VDC (clamping voltage,
but will JUMP up to 280V DC when I hear the pop.

Then it will slowly drain back down to 140V over about 1-2 seconds.

Darn, I wish I could figure this out and get back on CX!!

The RF Bias remains constant at -52V DC

NOW, if I adjust the CLAMPER so that it is all the way clockwise,
I STILL hear the POP, but there is no surge in plate current.

Delete the "REMOVETHIS." from my e-mail address if you reply that way!
Here is fine though!

See http://www.mnsinc.com/bry/hamfiles.htm
for a great variety of radio files and information.

Richard;

The FT757 GX is the small transceiver marketed before the FT890 and now
the FT900. The FT757 GX is a good rig for moblie or home use. The
receiver is not quite that same as the FT890 but is still a good deal.

Price range is most likely in the 500 to 600 dollars. Yes the 757 is similar to the TS440. The 757 does not have a built-in antenna tuner like the TS450SAT. A co-worker of mine has the FT757GXII installed on his sail boat and can work the world. Good luck in your friends quest.

> > I am looking for advice on how to repaint a cabinet in the
> > "black wrinkle" finish.

I see lots of good suggestions on where to get paint, but no one seems to have answered the basic question. I do a fair amount of this type of work, all of it with spray cans, and there is definitely a difference between the paints available. The "valve cover" paint works well for touching up with a small brush and heat lamp, but is not as forgiving on large surfaces - it tends to "pattern", which is to say it demands an absolutely even film thickness across the panel if you don't want areas of different wrinkle patterns. Ditto the colors other than black that I've tried. The only formulation I've ever used that is more forgiving on larger surfaces is the black ruf-coat wrinkle "varnish" from General Cement, part number 10-6012. Perhaps surprisingly, it doesn't do as well for touchup as the automotive kind, which is why I keep both around. If you have the wherewithal to purchase the black wrinkle paint in bulk and can use a professional automotive sprayer, that is obviously the way to go.

Technique - it is absolutely mandatory to either have hot sun or a heat lamp...I use both! I've tried the hair dryer technique, and it's great if you're interested in forming puddles of varying thicknesses! :-) Temperature needs to be above 80 degrees at the film surface, but not over about 120 degrees...higher temperatures produce a flat black oxidation on what should be glistening finished wrinkles. Spray a "slightly thicker" coat than you would use on a normal paint, let it set for 3 minutes (time it!), then spray a second coat. The more even the film thickness, the more even the wrinkle pattern - therein lies the art. You'll have to reach your own conclusions on what "slightly thicker" is - it's an experience sort of thing. The thicker the coats, the more chance you have for larger wrinkles (and strange mottling). Keep the heat up until it has completed the wrinkling process...it will take more heat in the thicker areas, which is what the heat lamp is for - use it like a spotlight to warm the areas which have not wrinkled from the sun's action. It IS possible to use the heat lamp alone - just don't get it closer than about 8", and keep it moving. Then leave the painted panel for six months. (Just kidding, but it does need several weeks to harden to a reasonable degree.)

The surface has to be horizontal when you paint it, unless you have a rotating fixture that will spin the part at about 10 RPM or so. If the corners of the cabinet are art deco rounded like the prewar Hallicrafters receivers, this is the only way to get an even coat without sagging. If the corners are square, then it will come out fine

just painting one surface at a time, each in a horizontal plane.

Perhaps more than you wanted to know...

The radio I posted is an AR88D, an HF model. Sorry for any confusion.
The "D" was the standard HF model as opposed to the AR88F which is also
an HF model, but was used in a diversity reception function. (The F
model has an extra knob in the bottom right hand corner of the front
panel)

I have never owned a 757, but have owned the 890 (nice little radio).
I also have owned two TS 440S/AT's. I find the 440 in a different
"class" in the sense that you can put substantially more filtering
in line for heavy QRM work. I believe the 735 allows the same. For
example, the 440 comes stock with simple ceramic filter for the 455 kHz
IF. The 890 comes with the same quality ceramic filter for its 8.9 MHz
IF. Here is where the 440 allows more: you can cascade filters in the
8.8 MHz IF with that stock filter in the 455 kHz IF. You can get two
filters in line at the same time, more stop band attenuation and better
skirts. The 890 only allows one single filter in the main IF line
and while you can go buy an optional crystal or mechanical version (which
is pretty good), you cannot cascade additional filtering for the better
skirts and stuff.

The other difference is that the TS 440S/AT is very, very convenient
with the AT on board. It works very well.

Overall, if you are going to use the rig for simple SSB communication
and don't expect to deal with major QRM, the differences are small.
Best of luck, you won't go wrong with any of these radios.

You can probably find real dial cord at your local electronics parts
wholesaler.
It comes in at least 2 sizes, so you should take a piece of the broken
dial cord for comparison.

# 1626. NEED HELP 618T

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-02-01 00:00:00 UTC
From: darrell <kc5ccq@wt.net>
Message-ID: <6b3e14$73p$1@news4.wt.net>
Source record: 110824

I need a manual or parts list for the longer coax set for the radio set. I think this would be in the overhaul manual. I have the operator manual.
thanks Darrell

Source record: 110854

I have a Precision 10-12 (in good working order) and a 10-15 needing repair/calibration.

I am seeking to swap for supplementary tube spec manuals (like the Hickoks have) for old tubes, foreign tubes and new tubes. Would also like to find a service manual that provides calibration and repair info.

I have copies of manuals of various sorts to swap that may prove useful to anyone who has TV-7's, some Hickoks, etc. Also have a copy of a 1937 RCA tube manual, etc.

If anyone is out there who has the above, let's talk.

Thankyou,

# 1637. Icom 701 Help needed!

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-02-01 00:00:00 UTC
From: Mark <crslex@iglou.com>
Message-ID: <34D3FBA0.2D5@iglou.com>
Source record: 110857

I recently purchased an Icom IC-701 that has a bit of a problem. When it is first powered up, the PLL is not locking on frequency. The frequency shifts violently up and down +- 2Khz or so. Then after about 4 or 5 minutes it stabilizes and then it is rock solid with absolutely no detectable drift. It does this every time regardless of band, frequency or mode. Would prefer comments from those who have owned this same model radio and have had to correct this problem or from qualified service techs.
Thanks.....KB4AEP

From: n2ey@aol.com
Message-ID: <19980201041800.XAA07193@ladder02.news.aol.com>
Source record: 110867

Hello Al,

What you are describing is sometimes called a "secondary image". In a double conversion receiver, if there is insufficient selectivity in the first IF, images of the second IF can appear. This is NOT normal operation in a receiver of the R-4B's quality.

In the R4B (a double conversion design), the first IF is at 5645 kHz (if my memeory is correct) and the second is at 50 kHz. There is an 8 kHz wide crystal filter at the first IF frequency, to set the maximum bandwidth of the receiver, and prevent secondary images. If this filter is defective, or if there is signal leakage around the filter, you'll get the secondary image problem you describe. The various selectivity settings (0.5 - 2.1 - 4 kHz) are obtained by the selectivity of the 50 kHz second IF, and probably still work as expected.

Hope this helps.

# 1649. Re: Anyone tried to repaint "black wrinkle" finish?

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-02-01 00:00:00 UTC
From: mailfrmpa@aol.com
Message-ID: <19980201052001.AAA17179@ladder02.news.aol.com>
Source record: 110869

Not an easy task using the commonly available paint!
Krylon, a product of Sherwin-Williams, I believe, was the product that I used.
I bought it from the S-W wholesaler here in Denver.

The problem relates to the packaging. That is, in order to make it sprayable with the limited pressure in the can, the material is thinned out considerably. To get a good wrinkle you need a thick coating. The can suggests that this be done by applying (3) coats with minimal drying time between coats. The last coat should be the thickest. Try to get the coats of equal coverage, too, because it is the thickness of the paint that determines the degree of Wrinkle you will get. Three even coats of black, applied so as not to get any runs or drips, proved to be a real challenge! I painted the cabinet of the Eico 720 three times before being satisfied/frustrated! I suggest you have a can of brake part spray cleaner on hand, it makes an excellent new paint remover! As another mentioned, heat speeds drying/wrinkling. I used a warm oven.

Good luck, and let us hear how you make out.

Hello David,

There's some kind of a short to ground in the driver plate circuit (6CL6). Try removing R940 and measuring the resistance to ground on the RF choke side - it should be very high (actually an open circuit). There is probably either a bad bypass capacitor (there are several in the circuit) or a mechanical short. The shield partitions and the coil shield are particularly suspect for shorts. Also, a bad 6CL6 can cause this trouble.

There is a lot of good Heathkit info, particularly about the HW-101 and its cousins, at KB9JJA's wonderful Heathkit website. Try

http://users.accessus.net/~dwentz/kb9jja/heathkit

and you will be pleasantly surprised.

# 1654. Misc Junk Value?

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-02-01 00:00:00 UTC
From: trains4@ibm.net
Message-ID: <34d41136.314303@news-s01.ny.us.ibm.net>
Source record: 110874

Just found this newsgroup. I was a Ham years ago, WA6UTN. Have bunch of boatanchors that I wonder if anyone wants. Am located in Silicon Valley area. Quick check finds the following:
NC183D works weakly, have manual
BC696A 3-4MC xmtr alum finish, poor shape
BC454B 3-6MC rcvr alum finish, modified
Special Defense Edition AARL Handbook 1942
AARL Handbook 1956
SSB for Radio Amateurs 1954
GE Tube Manual 1960?
Several Radio & TV News 57-59
6CW4 Neuvistor tube and socket

Looking for fair value. Also, might trade some of above for CQ Magazine book called Surplus Schematics?

Also have a 1941 Allied Radio Catalog that I plan to keep, but sort of wonder what sort of value it has.

Are there any swap meets in SF area that would carry this sort of stuff?

Replys to Gene Trains4@ibm.net

# 1655. WTB Halli SX-96 Parts

Source record: 110876

Based on recent free-market transactions--

>NC183D works weakly, have manual
Probably $100-$150 if not banged-up.

>BC696A 3-4MC xmtr alum finish, poor shape
Can't tell...Don't know what "poor shape" means.
Missing tubes? Bashed-up? Modified?

>BC454B 3-6MC rcvr alum finish, modified
If chassis not drilled (other then the little front panel
everyone drills) and all original plugs still intact, $30-$35.
If it has *any* chassis drill holes or plugs removed/damaged,
it's a "parter" and you *might* be able to give it away.
Important to note that an *original, unmodified*
BC-454 or -455 unit (not -453) is worth $45-$50 these days.
An unmodified ARA or ARC-5 version can go for $70-$80.
Most hamfest prices are lower because
hams are cheap... or broke... or both (like me)!

>Special Defense Edition ARRL Handbook 1942
$25-$30 if in good condition, covers intact, etc.

>ARRL Handbook 1956
$15-$20 if in real good conditon.

>SSB for Radio Amateurs 1954
$7-$10 if in good condition.

>GE Tube Manual 1960?
$15-$20 if in good condition

>Several Radio & TV News 57-59
50-cents to $1 each.

>6CW4 Neuvistor tube and socket
- ZIP - No market for these. Might trade to someone.

>...Also, might trade some of above for CQ
>Magazine book called Surplus Schematics?
That book goes for $20-$30 if you can find it.
I have one and wouldn't sell it for that.

>Also have a 1941 Allied Radio Catalog that I plan to keep,
>but sort of wonder what sort of value it has.
Some collectors will pay around $15-$20 if good/complete.

Hope this helps.

For Sale:

Nice Drake TR4, MS4, AC4 package. Excellent condition inside and out. Shiny knobs, no serious blems on either cabinet, Copper chassis no corrosion noted. Fresh final tubes. With Shure 444D mike, good power out on all bands. Will pay for UPS versapack. With manual copy and a few spare tubes. Great radio, just tired of tripping over it. $350 plus UPS from my zip 95827.

Thank you for the read.

Bob, KE6F

You can buy wrinkle paint in various colors from car restorers suppliers - I got mine from Eastwoods here in the UK, but they're an American firm so look in the Vintage car mags for an advert.

# 1661. FS: Boatanchor receivers

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-02-02 00:00:00 UTC
From: Tony White <twhite@cyberramp.net>
Message-ID: <6b5cni$rhn$1@usenet45.supernews.com>
Source record: 110683
Cross-posted to: dfw.forsale,rec.radio.amateur.swap,rec.radio.amateur.boatanchors

Due to overabundance of projects I am selling the following items:

Hallicrafters SX-28. This GC boatanchor receiver is in very good cosmetic condition, and should be in good working condition. The radio worked great the last time I tried it (I put it in storage several years ago and haven't touched it since). There are a few knobs missing and the meter is broken, but the housing is intact and I have a meter that may work as a relacement movement. No tabletop case. This was used at a VA hospital, I believe, based on what is painted inside the top cover. 110/220 transformer. Includes an original (NOT a reproduction) instruction book. $150 plus shipping.

Hallicrafters SX-104. This 30-50MHz boatanchor receiver is in excellent cosmetic condition and good working condition. $75 plus shipping.

Hallicrafters SX-105. This 152-173 MHz boatanchor receiver is also in excellent cosmetic condition and good working condition. $75 plus shipping.

Realistic DX-75. This GC boatanchor receiver is in very good-excellent cosmetic condition and good working condition. Includes an original (NOT a reproduction) instruction book. This is when Radio Shack was still Radio Shack, and not a Tandy division. $50 plus shipping.

Speical deal: Take all four of the above radios for $300, or buy all three Hallicrafters and get the Realistic for free!

DenTron MT-2000A Antenna Tuner. 3kW PEP antenna tuner. This unit is in good cosmetic and working condition. $150 plus shipping.

These radios are currently located in the D/FW area.

I need to get out of the radio business, so I would prefer outright sale to trades. Delivery possible in north Texas, eastern Oklahoma, or northwest Arkansas. If interested, or for more information, email me at twhite@cyberramp.net. Thank you.

# 1662. Re: 4-1000 amplifier question

Newsgroup: rec.radio.amateur.boatanchors

> Would like to discuss with someone who has built one, component values etc.
>
> Len K8GM k8gm@aol.com
Len; Good question. I have a multi-band 4-1000 homebrew amplifier and on the 20 meter band the input capacitor of the pi-net was appox.220 pf mica , the slug-tuned coil was 1 microhenry and the output capacitor ( tube cathode side ) was appox. 180 pf. mica. 1 Microhenry appox. 6 turns of no. 22 enamelled wire on a 3/8 th to 1/2 inch diameter form close spaced. Being a slug-tuned coil, it will allow you to vary the inductance to the required
value.
Now from the what it's worth dept., a tip I discovered this very afternoon. After putting in a brand new 4-1000 tube that had lots of gain , I noticed my once stable old amplifier had developed some serious spurious emissions in the 110-130 mhz region (aircraft communications and navigation aid band ). Since I live on the approach to a major airport ILS system etc. I wanted to make quite certain that my amp. was "clean". The problem was first noticed when I made my usual cursory check for amp. stability after installing a new tube. The plate and grid currents were indicating on the meters with no drive applied, but vox circuit keyed to allow me to look at the idling current. As I would rotate the plate tuning capacitor through it's entire range there were places where grid and plate currents would indicate with no drive. A quick check with a freq. counter showed the freq. at which the amplifier was
oscillating.
On my old amp. circa late early 70's, the screen grid was raised 1.5 ohms above ground.It was by-passed with a .01 disc ceramic capacitor. At first, I tried to ground the screen directly to chassis (rf) ground but this made matters worse. I remembered that I probably should have increased the original value somewhat as carbon resistors make dandy RF Chokes at VHF and UHF frequencies. I changed the value to a 10 ohm 2 watt carbon and "Presto", no more problems with
self-oscillation.

>please describe what these caps look like?
>Thanks for your help.

They are paper capacitors mounted in a cylinder like black plastic
housing. Unfortunately, they also seem to have a much higher
failure rate than the earlier wax paper capacitors they were suppose
to improve upon. So, to answer your question directly: they are
the same size and shape as wax paper caps, except instead of
being housed in a cardboard tube, the body is made of black
plastic. The name "Black Beauty" was used by Sprague for
their product line.

They look like large black plastic 20W resistors bearing color-code bands.
They are notoriously prone to failure (have deteriorated over time). Early
Hammarlund SP-600's are full of them, as is some other gear of the period. The
job of R/R the SP's RF deck to finish replacing all of them has endeared them
even less to some of us! Suggest remove any you see on first sight.

I had several of these in my Hallicrafters SX-100, and one was even seeping a small amount of an oily fluid. The radio was not experiencing any noticable problems, but all of the capacitors were replaced anyway, just to be sure.

As an aside, I have a Hammarlund HQ-180 from 1962 (this is the date pencilled in on the original owner's manual), and the capacitors in the radio are still all original, including the power supply filter. This is mainly due to the absolute horror I feel at the thought of going into that selectivity bandswitch mechanism to replace all of of the paper capacitors mounted around it (and all of those leads to the IF transformers mounted directly beneath it on the chassis). I would just rather not mess with it, considering that the radio still works extremely well, no sign of AC hum or any performance degradation. But they were in a lot worse shape on both the SX-100 and the SX-71 (the latter had the wax-dipped caps), so all of those were replaced.

A bad wax-dipped capacitor had shut down my Precision EC-200 signal generator; this is the only instance that I'm aware of personally where an old paper capacitor went bad and took the equipment out of service, but that does not stop me from recapping older gear whenever possible (that Hammarlund being the only exception so far).

Does anyone know who makes the SBE capacitors sold by Antique Electronic Supply...? I've used these, and have had extremely good results, the only real difference being that they are not marked with a stripe for "outside foil" (which we would customarily run to the ground side whenever applicable).

C.K.

For sale

Heathkit MR-1 "Comanche" Receiver
Good cosmetic condition (panel=8.5, case=7, scale of 1 to 10)
Electrical condition unknown
The glass tuning dial tube is broken, but taped together.
One tube missing, other tubes' conditions unknown

This would make a good little project for someone who would like
an old Heathkit to restore, or needs a second reciever for 80,
40, 20, 15, or 10 meters. Info on this radio at:

Heathkit Virtual Museum
http://www.cyberventure.com/heathkit/ham/mr-1.html

Manuals available for $20.00 from:

W7FG Vintage Manuals
http://www.w7fg.com

Price:

$85.00 or best offer, shipped via UPS ground in the Continental US.

E-Mail me if interested.

Darin "Basil" Arrick, KB5KHR
kb5khrFILTER@homestead.org

(You know what to do; take out the "FILTER" part)

# 1689. FS Antique Q Meter

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-02-02 00:00:00 UTC
From: Larry Asp <larry.asp@sympatico.ca>
Message-ID: <34D68741.683D@sympatico.ca>
Source record: 110711

Q - Meter, piece of antique test gear. Type 160A, 50KC - 75MC, Manufactured by Boonton Radio Corporation, Boonton NJ. Used to figure out Coil inductance and capacitance. Dont ask me how to use it. If you are interested in figuring these things out the old fashioned way using handbook formulas, you have something. The silent key whose estate this came from had a box of old coils, and capacitors, everyone of them marked with inductance or capacitance. He used this instrument to figure them out. This item is heavy, in the 30 - 35 pound range, painted olive drab, and has a sloped front. Heathkit made a Q - Meter earlier on, this item is better quality by far. Any interest in this item? I dont know a value at this point, but I would be willing to sell or maybe trade it.

Maybe you or someone else can help me. I posted this last week...looking
for info...

---

I have an old tube radio (for sure pre 1960's) I'm looking for info and
price range these go for. (Yes, I am considering selling it, but not yet.
(Will post in rec.radio.swap when I am.)

The only info I can see on it is "Freshman Masterpiece" and a serial
number of A65932. It says it uses UV-201A and C-301A tubes.

Any help appreciated.

--
Several days ago I had dinner at a chinese restaurant with Dr. Martin JisCHke (President of Iowa State University.). I was amazed that an hour later I was again hungry for power.

InnfoGraphic's huge warehouse sale becomes an

Auction - Auction - Auction - Auction

Saturday, February 7th; 10 am till Done
Preview 8:00 am

733 S. E. 9th Ave., - Upstairs
Portland, OR 97214

1/2 Block North of Morrison on S.E. 9th Ave.
Eastside! Look for the fluorescent red signs. Easy to find, freeway directions are at the end of the notice.

5,000 square feet full of test & laboratory equipment;
radio, video and photographic equipment; office stuff;
computer parts and equipment; software; printing equipment
and telephones.

You will be amazed at the amount and variety
that fills this warehouse.

Some of the items in the sale: 1 Gig 3 1/2"& 5 1/2 SCSI Hard Drives, Audio tape duplicator, Durst F30 Enlarger parts, Cameras, lenses, Kodak slide projectors, Super 8 Cameras, Microtek scanner, IBM 7XX docking station, Zenith 8088 Laptop, SCSI Iomega Floptical, Asante Ethernet - SCSI Box, GE Master Low Band Base station, Phoenix SX 16 Ch VHF Mobiles, UHF & VHF base antennas, CBs, 49 Mhz radios, Low Band HTs, Double slant face rack, File cabinets, Computer paper, 30 pin sims, network cards, NEW 9 track Reel tapes, 600', 1200' & 2400'; Map or rolled paper tube boxes, Tektronix HR650 Broadcast monitors, 1", 3/4" & 1/2" VTRs & players, low band Mitreks, Micors & HTs, new locking radio mounts, Radio parts, Misc. darkroom, computer parts, 1.2 Disk drives. MFM HDs and SCSI, PC cards and drives, Ethernet cards, collectables, Tektronix & Apollo software and manuals, 1.2 Gig. Swallow 8" & NEC 9" SMD HDs and lots of misc.

More;
Swan 400 Transceiver, VHF Stationmaster type Antennas, Low band HTs, Micors, Mitreks, Lots of Radio misc., lots of Tubes, mobile radio microphones, Telemation O'scopes, Collectable Tektronix & EICO, Wire, Power cables, RJ11 & RJ45 cables, laser printers, Ethernet, Arcnet hubs & cards, Collectable computers, S100, Altos, Kaypro, Xerox, DEC HSC50, RA60, RA 81s, 486 & 386 PCs, old 8" Bernoulli carts, drives and interface cards, DC600, DC300XL tapes, 24 pin & 9 pin dot matrix printers, lazer printers, HP Paintjet color printers, HP 7475 plotter, large & small digitizers, super 8 cameras, video misc. production cabinets, VTRs, switcher, office stuff, PMT processors, Tegra Imagesetter, Vacuum pumps, HEPA filters, pneumatics, process controllers, ovens, waterbaths, heaters, meters, breakers, electrics, motors, Fax, one handed (right) Dvorak

keyboard Selectric III, chalkboards, Binders, floppy disks, manuals for older software, older software, VT600 Laser Typesetter printer, KLM 40W Power Amp (VHF), Laser tubes, Vicon Tilt swivel Video camera outdoor housing, Sansui tube tuner/amp, Sony & Roberts tuner/amps, Vacuum & air pumps, motors, gear reducers, electrical boxes, Motor controllers, 16 mm film reels, SCR rack mt. power supply, Beckman scopemate 2, Single line telephones, answering machines, call loggers, Demon Dialers, dictaphones, Calculators, Gulbransen electric organ, Orthopedic appliances, Knee braces and much much more.

This is a public oral auction. The auctioneer is Terry Lorance.

As always start time is 10am.

Web Page Http://members.aol.com/innfograph/

The list should appear on the web page shortly before the Auction.

Call (503) 235-0227 for a snail mail brochure. Please leave your name and address at the message.

Hope to see you there!

Directions from the freeways. To get to the sale get on I-5. Follow it to central Portland.

If comming from I-5 South, take the Water Street Exit. At the the stop (Water St) take a left, go one block to Belmont, take a right. Follow Belmont to S. E. 9th Ave. Take a left on S.E. 9th. Go one and one half blocks (North) and look for 733 and fluorescent signs. Park.

If comming from I-84, go all the way into town and take I-5 South. Before you get on the freeway the is an Exit for the industrial area and the Morrisson St. Bridge. Take this exit but stay in the left hand lane of the exit. This takes you East. Do NOT get in the right hand lane as this leeds to downtown across the Morrison Bridge. Do NOT take the bridge. The left hand lane of the exit dumps you on Belmont Street. Follow Belmont to S.E. 9th, take a left on S.E. 9th. Go one and one half blocks (North) and look for 733 and fluorescent signs. Park.

If comming from I-5 North, take the industrial area and the Morrison St. Bridge exit. This exit also services OMSI and you should see signs for that too. Take this exit but stay in the left hand lane of the exit. This takes you East. Do NOT get in the right hand lane as this leeds to downtown across the Morrison Bridge. Do NOT take the bridge. The left hand lane of the exit dumps you on Belmont Street. Follow Belmont to S.E. 9th, take a left on S.E. 9th. Go one and one half blocks (North) and look for 733 and fluorescent signs. Park.

# 1714. For Sale: Knight-Kit R100A plus matching S8-A speaker - $110 plus shipping

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-02-02 00:00:00 UTC
From: jvercellino@sprynet.COM
Message-ID: <199802020238.SAA11046@m1.sprynet.com>
Source record: 110750

I have a Knight-Kit R100A receiver with the matching S8-A speaker for sale for $110.00 plus shipping. Both the receiver and the speaker are in good cosmetic and electronic condition. Receiver also has the 100 kHz crystal calibrator built in. I will also include a copy of the manual.

I also have a R100A parts radio. The parts radio is virtually complete. There are some missing tubes and I don't have the cabinet for it. I believe the filter choke is fried in it. The parts radio goes for $25.00 plus shipping. I'll sell all for $125.00 plus shipping and I will not separate the speaker from the working receiver.

Please respond to jvercellino@sprynet.com.

# 1715. CX Soapbox

The Classic Exchange was great! I ran an old Viking Valiant (1958) and a Drake 2C (1965?) with my TO-Keyer, and a G5RV Dipole.

SOAPBOX:

The contest was GREAT fun!

I think the Awards for wildest signals should go to:

KS4C for the WILD chirp on his first transmission that I heard, followed by a clean signal 10 minutes later when we DID finally QSO.

The Award for SHARPEST keying should go to the telegraphic clicks of K1VVC's highly distinctive-sounding Meissner 150-B!

I was having rig trouble during the contest! The Valiant had been popping for a few weeks, so I had been off the air actually for months. Recently I replace the 866-As with a pair of 3B-28s and installed all new electrolytics in the rig - all in anticipation of the Classic Exchange.

As usual the rig started POPPING loudly about every 20-30 seconds and I ran OK for the first hour of the contest but it was scaring me, so I decided to tear into the station and fix the darn thing.

It took me three hours of troubleshooting but I finally found it! One of the two 20 K - 10 Watt resistors in series across the B+ was completely OPEN! The Screen supply would gradually charge up to the full 790 Volts and then ZAP! Something would discharge it and it would start building back up again!

Thanks, CX, for giving me the motivation to FIND and FIX this thing!

I happily returned to the fray at 2356 UTC to make a number of enjoyable QSOs.

I found the AM segment of 75m unusable due to QRM, QRN and a lot of folks on AM who were apparently not in the contest, but occupying the freqs.

Say - WHY do we recommend 14.120 as a CW frequency?? That is a DX SSB segment! I would have liked to have tried 14 Mc. Imagine the chirp and drift we could have generated there, he he!

Best regards - Brian Carling "BRY" AF4K

Which one?

Model VF-1, HG-10 or HG-10B or what?

I've seen them anywhere from $10 to $85 asking prices.

Typically at hamfests $25 to $60
Elsewhere, sometimes a bit more. The VF-1 tends to be cheaper, usually going for about $30-40.

They are beautiful...(and black!)

No but seriously, the best I remember they are tubular paper
capacitors that were around a long time ago.

You should ask about them in rec.audio.tubes if you want more details!

Hello Len,

Let's assume that the impedance seen at the imput is either 13 ohms or
200 ohms resistive. (Not a very good assumption that it be resistive,
but the magnitude of the impedance must be one of those two values, if
the SWR is 4:1)

If you connect a 10' piece of 75 ohm coax between the exciter and the
amp and use that as a series matching section, and if it drops the SWR
down to around 2:1 or less, then you know that the impedance was up
around 200 ohms, rather than down around 13 ohms.

If, on the other hand, The SWR changes to about 8:1, you will know
that the input impedance to the amp was about 13 ohms.

Now you have an opportunity to design an L section that will transform
the input impedance to the desired 50 ohms. However, wouldn't it be
easier to just get one of these cheap little matchboxes, such as the
MFJ-901B, put it right at the input of the amp, and then tune it for a
1:1 SWR as indicated on your exciter. That way, you can match other
bands as well (assuming that your amp will eventually become extended
to other bands), and you can get the SWR down pretty low on any
frequency within the band, if you so desire.

Black Beauty is a line of paper capacitors made by Sprague, a major cap manufacturer for generations. They are axial lead--that is, the one wire comes out of each end--and tend to go bad in old tube equipment. One of the first things many of us who buy old radios ("boatanchors") do when we get a new find on the bench is to rip out all the Black Beauties and replace them with Orange Drops (another line from Sprague--bright orange, and the leads come out one side rather than from each end) or other new caps.

# 1732. REVIEW: QSTView - QST Magazine on CD-RO, ARRL, 1997

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-02-02 00:00:00 UTC
From: mc@shore.net
Message-ID: <6b4rmi$4mm@northshore.shore.net>
Source record: 110768
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.boatanchors

REVIEW: QST VIEW - QST on CD-ROM, American Radio Relay League

For many years the American Radio Relay League, aka the ARRL, has shown little interest in my favorite equipment - tube-based radio communication gear. A few years ago a couple of articles were published in QST about the resurgence in interest in this subset of the hobby. It must have resulted in much favorable comment from readers and members because the League has apparently taken notice of we who love the vintage stuff and our interests.

Recently the ARRL began to release some of their documentary material including QST on CD-ROM. For those of you who are not familiar with this, Compact Discs hold 650 Megabytes of information or 74 minutes of audio. Most records are now released on CD. They are digital of course and are read by an optical reader connected to your sound system for audio and play just like a vinyl record except there's no wear and tear on the disc. Just about all computers sold these days have a CD drive to read data stored on CDs and almost all software comes on this media. The ROM means Read-Only Memory but this is somewhat of a misnomer because in reality its Read-Only Storage. So essentially the CD is a storage device that holds a LOT of stuff - the average page of text requires 2 Kilobytes of storage space so do the math and figure out how many pages can be stored on a 650 Megabyte CD. The current Handbook is available on CD as well as the Callbook which is no longer available in paper form. There is also a trip planning program that will also include and highlight the VHF/UHF repeaters along the route.

Back to the League and its QST CD project. Recently they began to offer the back issues of QST on CD working backwards from the 1990s. We are the main beneficiaries of their quest to eventually have all issues of QST available on CD-ROM. It's a fine way for the League to recognize the incredible interest in the older equipment we all love so much. I am very pleased to see that QST is now available from 1940 to 1996 in the following libraries:

1940 - 1949

1950 - 1959

1960 - 1964

1965 - 1969

The rest of the collection is sold in five year increments to 1994 inclusive. 1995 and 1996 are available by the year as part of a compilation of the three ARRL periodicals; the other two being QEX for experimenters and NCJ for contesters. Price is $39.95 for each library. The annual periodical 1995

and 1996 compilations are $19.95 each. (plus $4.00 shipping). The ARRL's toll-free order line and Web site are listed further down the page.

I took a good look at the 1950-59, 1960-64 and 1965-69 libraries and here's what I found.

Virtually every page containing articles, columns, ads and covers have been included in the collection, even the classified "Ham Ads". Each library comes with a program called QST View that manages the indexing and data. When installed QST View builds its own index database. Should you add an additional library set later you will be given the option of reinstalling everything or just updating the index database. This installation can take anywhere from five minutes on a Pentium 90 to 30 minutes on a 386. Your computer must be running Windows (3.x or 95) to be able to use QST View.

Once installed and the index constructed you can search for information by article, column, author's name/call, year or month or just browse issue by issue. The search query form will support the use of some DOS "wildcards such as *, <, >, etc. QST View has two windows - the Index and the Document Viewing Window. Once you have located an article you can close the Index window and the Document Viewing window takes the whole screen. You can also fit the image to the viewing window, pan and scroll the article, even print it out if you wish.

As far as content is concerned I found that the libraries I examined are full of information on tube-based equipment and I imagine that the libraries into the mid-1970s will be as well. I hope to take a close look at the 1970 to 1974 library shortly to see if this collection fits into our area of interest as well as the earlier libraries as they are made available. In short I found QST View and its' associated libraries a very useful reference source especially the earlier issues. The rich history and lore of Amateur Radio was well chronicled in the pages of QST which is the official journal of the ARRL as well as a technical publication and makes for very interesting reading. I am especially looking forward to seeing the libraries from the 1920s, 1930s and 1940 and hope that the ARRL will see a good enough response to the earlier libraries it now has available to encourage them sufficiently to produce the earlier QSTs on CD as soon as possible.

For more information you can contact the ARRL either by phone at 1-888-277-5289 or via the Web at www.arrl.org/catalog

Also known as a Heathkit Lunch box.......They had a 10, 6, and 2 meter version.

The 10 meter version was my first mobile back in the early sixties when I was 14. I had one mounted to the handlebars of my bike with a car battery mounted on the back of the bike. The radio fed a 98 inch whip attached to the rear wheel axle.....

I'm looking by either a Ranger (I or II), or a Valiant II transmitter. Must be in excellent or near-mint condition, and work 100%. Will pay top dollar cash for the right transmitter. Please email if you have or know of one for sale. Thanks.

Now THAT is REAL RADIO folks!!!!

A Benton Harbor Lunch Box on your bike handelbars...

Much better than cruising the neighborhood with a loud set of
speakers booming out meaningless RAP beat, you flew through with the
Lunchbox squawking out ham calls!

I am looking for a T-368, prefer "C" or newer unit for use on AM.
Any condition ok, able to do restoration.
Would prefer unit in the Northeast, but will consider all.
Also interested in parts, parts units, or individual decks.

Email information to kg2ic@buffnet.net

Thank you.

"AC" (Aintgotta Clue) responds:

> Like you don't know that means TOWER.......

Nope, I think he *did* mean TWOER (as in Benton Harbor Lunchbox).
Also in this series were the TENER and SIXER. These were 1960's era
portable radios for 2, 6, and 10 meters.

The Twoer was my first 2-mtr rig, when I was 14, back in the sixties as well. Had the Tower and a Sixer in my first car, a '53 Merc, when I turned 16., along with one of those halo-style antennas. :-)

Message-ID: <34D72398.7ECF6C68@gulf.net>
Source record: 110597

I have an old Henry 2K linear (2 digit serial circa 1963) floor console. Need help getting access to the input section (t/r relay) that is housed in a metal enclosure below the rf deck. Is there anyone out there who has opened up one of these units? I'm missing something, because after clearing off the rf deck I still can figure out how to open it. I don't want to do a hacket job and cut into the enclosure.

Appreciate any constructive input.

REVIEW: QST VIEW - QST on CD-ROM, American Radio Relay League

For many years the American Radio Relay League, aka the ARRL, has shown little interest in my favorite equipment - tube-based radio communication gear. A few years ago a couple of articles were published in QST about the resurgence in interest in this subset of the hobby. It must have resulted in much favorable comment from readers and members because the League has apparently taken notice of we who love the vintage stuff and our interests.

Recently the ARRL began to release some of their documentary material including QST on CD-ROM. For those of you who are not familiar with this, Compact Discs hold 650 Megabytes of information or 74 minutes of audio. Most records are now released on CD. They are digital of course and are read by an optical reader connected to your sound system for audio and play just like a vinyl record except there's no wear and tear on the disc. Just about all computers sold these days have a CD drive to read data stored on CDs and almost all software comes on this media. The ROM means Read-Only Memory but this is somewhat of a misnomer because in reality its Read-Only Storage. So essentially the CD is a storage device that holds a LOT of stuff - the average page of ASCII text requires 2 Kilobytes of storage space. A scanned page with pictures will require more, in some cases over 100 times as much space. The current Handbook is available on CD as well as the Callbook which is no longer available in paper form. There is also a trip planning program that will also include and highlight the VHF/UHF repeaters along the route.

Back to the League and its QST CD project. Recently they began to offer the back issues of QST on CD working backwards from the 1990s. We are the main beneficiaries of their quest to eventually have all issues of QST available on CD-ROM. It's a fine way for the League to recognize the incredible interest in the older equipment we all love so much. I am very pleased to see that QST is now available from 1940 to 1996 in the following libraries:

1940 - 1949

1950 - 1959

1960 - 1964

1965 - 1969

The rest of the collection is sold in five year increments to 1994 inclusive. 1995 and 1996 are available by the year as part of a compilation of the three ARRL periodicals; the other two being QEX for experimenters and NCJ for

contesters. Price is $39.95 for each library. The annual periodical 1995 and 1996 compilations are $19.95 each. (plus $4.00 shipping). The ARRL's toll-free order line and Web site are listed further down the page.

I took a good look at the 1950-59, 1960-64 and 1965-69 libraries and here's what I found.

Virtually every page containing articles, columns, ads and covers have been included in the collection, even the classified "Ham Ads". Each library comes with a program called QST View that manages the indexing and data. When installed QST View builds its own index database. Should you add an additional library set later you will be given the option of reinstalling everything or just updating the index database. This installation can take anywhere from five minutes on a Pentium 90 to 30 minutes on a 386. Your computer must be running Windows (3.x or 95) to be able to use QST View.

Once installed and the index constructed you can search for information by article, column, author's name/call, year or month or just browse issue by issue. The search query form will support the use of some DOS "wildcards such as *, <, >, etc. QST View has two windows - the Index and the Document Viewing Window. Once you have located an article you can close the Index window and the Document Viewing window takes the whole screen. You can also fit the image to the viewing window, pan and scroll the article, even print it out if you wish.

As far as content is concerned I found that the libraries I examined are full of information on tube-based equipment and I imagine that the libraries into the mid-1970s will be as well. I hope to take a close look at the 1970 to 1974 library shortly to see if this collection fits into our area of interest as well as the earlier libraries as they are made available. In short I found QST View and its' associated libraries a very useful reference source especially the earlier issues. The rich history and lore of Amateur Radio was well chronicled in the pages of QST which is the official journal of the ARRL as well as a technical publication and makes for very interesting reading. I am especially looking forward to seeing the libraries from the 1920s, 1930s and 1940 and hope that the ARRL will see a good enough response to the earlier libraries it now has available to encourage them sufficiently to produce the earlier QSTs on CD as soon as possible.

For more information you can contact the ARRL either by phone at 1-888-277-5289 or via the Web at www.arrl.org/catalog

Hi Dave,

WOW, a mint AT-1. Used one myself in 1955. For a serious collector, probably worth your asking price. But me, I would want one for actual use on the air, so too expensive.

GL on finding a buyer.

The TWOER was my first 2 meter rig too. I was net control station for awhile back in 1965 for our local 2 meter ARES net. I was in high school at the time and the twoer was all I could afford. Just the thought of running a 2 meter net on AM brings back all sorts of fond memories, but not any I would want to live through again.

I ran a radio repair shop for over 20 years. Monofiliment line will not work. There is a special cord used for this. If you cannot get to a repair parts store to get it by mail order, get some unwaxed dental floss. Yes it will work. I have had times when the original dial cord was a smaller diamater than what I had in stock. Living 60 miles from the parts house causes one to think sometimes of alternatives.

ALWAYS fun to confuse the "younger generation" of hams - I built a couple of Heath Twoers in my day (early 60's) they were a lot of fun, cheap and effective - until the repeaters came on the scene, and with the Heath's WIDE regen receiver - there went the band!

I'm not sure you can't. TenTec sells some really nice 6M & 2M FM xcvr kits as well as some really decent 2M & 6M transverter kits...great quality at a decent price. For HF rigs there are several choices for great kits, most (all?) QRP...Wilderness, OHR, TenTec, Small Wonder Labs. There's also an outfit getting ready to market a CW/SSB xcvr kit that looks real good...can't remember the details offhand but I'm sure some others will know. I miss Heathkit too, but there are alternatives.

You're right about the Sixer, tho. Mine still works, too...

Whoops. I gave the wrong designation. It is part of the TBY-4 equipment. I think that it is a 28-40mc AM transceiver that is battery powered, except that I have a military issue 115 VAC supply clipped below.....
Does any one have an idea of its value? -73

Message-ID: <6b8sgd$lej$1@newsd-113.bryant.webtv.net>
Source record: 110625

I'm no technical wizard but I'll try to help.
first you said that the grid resistor is running very hot, this points to excesive drive which could be the problem . You also said that one of the tubes could be a little soft indicating that the tubes are not matched which can make the stronger tubes do all of the work causing increased grid current and probably increased plate current on the better tubes .

The next problem mentioned was that the loading cap was maxed out on 75m am
You can probably fix this by placing a 1000v mica cap with a value somwhere between 10-100 pf (uuf) in paralel with the loading capacitor however this might make it difficult to load up on the higher bands.

Hope this helps,
matt burns

From: cnord@snet.net
Message-ID: <34d65ff5.951403@news.snet.net>
Source record: 110720

A coworker offered me a radio from his grandfathers house. He told me it was a Motorola and his grandfather used to be a volunteer fireman. Expecting an old VHF BA, I was very surprised at the small box he brought in. It has an unusual red Motorola logo and says transmitter T-69-20A on it.

Opening it upI found several tubes including an 807 and a 6L6 a 7.997 MHz crystal and 3 small transformers. In addition the coils in it are obviously not VHF !
Looks like a H.F. xmtr of some sort w/ a modulator. Anyone know anything about it ? If I am correct I would love to get it onto 40 meters.
Can anyone help ?
Thanks and 73

Source record: 110725

PPG (Ditzler) made a wrinlke agent which could be added to 9000 Black
Enamel.
Since the EPA has wrecked the body business, this agent is scarce due to
it's high VOC content. Places to look are, your local body shop (every
shop has their favorite
brand of paint, so you may have to use their brand of black for chemical
compatibilty)
custom hot rod shops, Harley-Davidson dealer, and restoration shops. It's
out there,
and will require professional spray equipment to apply, but nothing out of
a spray can will come close to the finished product. Cheers, Jim

Konigsberg was bought by Narco decades ago and re-named Konel. It was bought
by Furuno in the late 70's. All the manuals for the Konel stuff went with
Narco and were probably destroyed a long time ago.

Hi Fellas;
I have for SALE:
SWAN 400 transceiver with the 406 external VFO and 117X supply(no spkr)and manual.
Transceiver works and is putting out over 200 watts all bands except 10(100watts).
This is without pushing it.
400 condition is as follows: Mint inside, no sign of any corrosion or dis-coloration. Front panel is mint except that the lettering seems to be falling off. No chemicals used in cleaning any of the items. It just appears to be a bad silk-screening, top of the cover has a few scratchs but not deep gauges. No visible mods.
The 406 VFO is mint, a custom bandswitch knob was made so its easier to change bands.
The 117X supply looks as new.
Price is $200 shipped Conus. Here is a picture of everything including the insides.
Thanks es 73....Rich WA2RQY (1961)

Bought a used Dentro 160-10 Super Tuner and fould the band switch was
a crispy critter. Not Nice.. Need a single pole 12 position or 11
position HEAVY DUTY rotary band switch to replace the afore mentioned
piece of burnt junk. The original was so small it belonged in a QRP
tuner not one rated for 1KW PEP. Got anything perhaps military
surplus collecting dust on the shelf you would like to part with
cheep? Got plenty of room in the box for anything up to 3 1/2 inches
in diameter with a 1/4 inch shaft.
Thanks in advance to the group....

CX was a blast. I got on the air just before the contest
started with a Globe Champion I bought a year ago, but had never
gotten around to checking out. CX was the impetus. So after a little
work, the Champ was putting out 270 watts or so according to the
dummy load and it was time to try it on the air. Turned on the rcvr
and hooked up the antenna and who do I hear - Tom W4UOC, the guy I
bought the Champ from. So he HAD to be my first contact with it and
indeed he was.

So the contest starts and I fire up a couple of other rigs -
for me, the variety of gear used during CX is the very
best part of the contest - I don't keep track of much beyond that.
here's the list from this year's effort on 75m phone:

N4QY Larry Valiant
HT-37
Ranger
RBG-2
HQ-129
RME 6900
75A-4

Joel,

Try placing a pig-tail slo-blow fuse across the circuit breaker in the
HP-23A.
Use the same current rating for the fuse as the circuit breaker. Sometimes
these circuit breakers get a little weird and will trip at a lower current
than rated.
If you can get your hands on a AC current meter, measure the AC line current
with the rig under full load. Good-luck.

Jim.

I have a SX-25 Super Defiant for sale. It's all original and very restorable, it currently has thre or four bad tubes, so it does not work. As far as I know that's all that's wrong with it. It is all original, has all the knobs, covers and so on. If you would like to see it here is the address for a jpg of it.

http://home.revealed.net/qste/rigs/sx25.jpg

Also comes with original manual not a copy. Price is $75.00 and I will ship it for free.

Source record: 110648

Hi Nick
Great hearing that CX treated you well, but kind of a downer at this end since all my gear was just put in storage while I'm moving to a new QTH. Can't wait for the next chance to fire up the thermionic heating system for the new shack, and hope the wiring supports it all, HI !
Xmtrs here: B&W 5100/51SB, DX-100B, TX-1/SB-10/HA-1, HT-32, HT-37, Valiant I, Ranger I, and a CE-20A/ 458/ homebrew anp combo.
Rcvrs are NC-300, 303, 2-40D, HQ- 170, 170A, 200, SX-101, 111, RME-6900, RX-1.
I recently thinned out, and parted out many of the projects I've had stockpliled, and only have a Marauder left on the workbench. Hopefully I can find a power xfrmr for it this year, and return it to active status.
My present QTH has been pretty dissappointing for operating, since it's not "antenna friendly" but I've managed. My 35' sloped wire is completely surrounded by buildings, and my output feeds an old 150 watt autotuner via 100' of RG-8X coax. Ihaven't found the bands to be very cooperative lately, but sure wish I had left a few items here for CX.
Best wishes, and hope to be back on the air soon !
Ed K, KB2NSP in Ocean City, NJ

And either disable the breaker or remove it, or you will only have protection
at twice the amperage and might as well have shorted it with a solid wire
<Doiiuuhrrrr...> Or, you could replace the breaker if it is getting "trippy"
below its rating, or even find out why you are drawing excessive current (if
so) and fix the cause, there being so many 101's that do not exhibit your
problem.

Frank

I hear that :)

Also my first two meter rig in 1964... spent a week building it, used a TV antenna with its 300 ohm twinlead
rigged to the RCA jack used fo r the antenna connector (what did I know?) Actually it worked ok... from my suburban philadelphia location I worked out about 20 miles. Later went uptown and got a 3 element Hi Gain
and some old RG-58 (wonder what the loss was?) and worked stations over 50 miles away. Upgraded to an 8 element and a rotor plus RG-8 actually worked DX (New York NNJ and Connecticut).

Eventually used it in my fathers car with a Squalo on the roof and a vibrater supply. Finally traded it straight up for a Knight T-60. I think back then almost everyone had a Twoer.

I have one still in aux. service and not available for sale, but I may be able to help you with info and photos. It's a 1000 watt 443A-1 Doherty installed in 1940. I often wonder if it's the last of its kind still in operable condition and ready for action.

I once had one of these. In some ways (and certainly by today's standards) it was a miserable radio. But it was advanced for its time and I loved it anyway. Reliability was a problem. I had to fix it several times, bad internal connections and PLL problems. But being able to get into all those repeaters WITHOUT buying crystals!! It was almost like cheating!

Before the 144 JR, Emergency Beacon Corp (who is a manufacturer of emergency locator transmitters for aircraft) had plans to make a grander version of this radio. I believe it was to be called the EBC 144 (non-junior, of course). They were taking orders for them, and I even put down a deposit. The specs seemed too good to be true, and I guess were too ambitious, for a few months later I was offered a refund of my deposit when EBC cancelled the 144 project. The 144jr was to be built instead, but seemed too expensive for the features.

A few years later, I picked one up, NIB, at the Rochester NY hamfest for a substantial discount. I got many years of use, and an education in PLLs, before the unit was stolen from my van. Ha! Let whoever took it, assuming they had any technical knowledge at all, try to fix it without the manual...

....Peter

# 1838. Program to log CX contacts?

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-02-05 00:00:00 UTC
From: Carl Yaffey <cyaffey@sprynet.com>
Message-ID: <eZjiSVmM9GA.260@ntdwwaaw.compuserve.com>
Source record: 110535

I've been thinking about putting my software expertise to work in a Ham Radio
project. I'd like to find something to write that nobody else has written (good luck, eh?).
Do any of you think a program to log contacts in the Classic Radio Exchange would be
a good idea? As one option, it could allow you to enter all of your equipment ahead of time so that you could easily pick a trasmitter or receiver from a "pick" list when you made a contact.
Do you have any OTHER ideas fora Ham-related program that would do something unique?
TNX in advance es 73,
Carl K8NU

Source record: 110537

I am reburbing the subject piece of test equipment, and the power transformer
has gone south. Specifically, it's a ferroresonant transformer with 90 - 130 VAC
input and 115 VAC +/- 1% output. The secondary voltage no/load is only about
40 volts, and drops 10 - 15 volts under load. It appears to have a shorted turn,
and heats up excessively after being on (again, no load) for a couple of hours.

Help appreciated. Please email directly to me at:
tskelto@ces.clemson.edu

# 1842. More Sale Stuff

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-02-05 00:00:00 UTC
From: vmike@master.ceat.okstate.EDU
Message-ID: <199802051642.IAA15691@mailbox2.ucsd.edu>
Source record: 110539

Well Fellow Collectors, here is some more stuff from my
collection needing new homes. I have extra books, tube manuals,
equipment manuals, crystals, and equipment.

The books and manuals and tube manuals are all in good usable shape.
Some of the tube manuals are worn and have loose pages or covers,
all the other books and manuals are intact.
The radio equipment is all in pretty good looking condition but has
not been fired up in years (read many) some of this stuff I didn't
even know I had.

As far as buying, make me an offer, highest offer gets it, in other
words, I will not set any prices, I want this stuff gone, in other
words if you offer $5 for a $50 item and are the only offer, you get it.

Figure on paying the shipping. If you buy a radio figure on a delay,
I will have to find a box and packing for it, and sometimes it takes
time, it's not like this is all I have to do in my life.
And, for the nervous types, I never deposit a check until I ship the
goods.

As far as the crystals go, they are presented here in lots, that's
how they will sell, please don't ask me for single crystals or onesie
twosies, just make me offers on them as they are lotted.

The best way to get ahold of me is either e-mail or office phone
during the day.

What works very well is 5 to 8 lb test braided dacron or "squidding" line.
You want to stay away from the wax or teflon coated dacron trolling lines
and they are too slippery to be useful.

Steve Harris

Fellow Ham in need of information:

If anyone has a schematic or know the purpose of the wire terminals on the back of this radio please let me know. I has 3 terminal strip two of them have 2 attachment points the other has 4 screws. I know that one of the pair is for the Antenna and the other is for the speaker. It's the middle 4 screw terminal that is the one in question. It must be for a mute circuit or antenna change over relay of some sort. Any and all information greatly appreciated.

For Sale, Hallicrafters S-76, General Coverage Receiver (.53 - 32MHz).
Early '50s, dual conversion receiver. According to Raymond Moore,
"first of a line of double conversion receivers using the 50KHz L/C
filter system".

Very good condition. Original, black paint, front panel lettering still
clear and readable; original knobs. No extra holes. Working when I
purchased it two years ago, hasn't been used since. Copy of the manual
with schematic.

$175 plus shipping. Call if you have questions: (425)481-3573

I picked up an unusal part today and need
some help in identifying it. It is a large
hallicrafter 455kc crystal filter. It has
2 pins spaced about 7/8" apart,the top has
rounded corners,has a serial number #20589,
has the word hallicrafters in large letters,
is marker "crystal filter freq 455 Kc. It
weighs several times more then a ft243 crystal.
It also has 2 small studs on the front that has
a small wire with a small lead security device
attached to determine if it has been opened.
The fellow who gave it to me said he thought
it came from an sx-28?? Does anyone have any
idea what rig it is used in?? Does anyone need
it??

Thanks much,
Don Ferrill K9TWO Boatanchor collector

Cross-posted to: rec.antiques.radio+phono,rec.radio.swap,rec.radio.amateur.boatanchors

Mark Your Calendars!

The Antique Radio Collectors & Historians (A.R.C.H.) of St. Louis, MO has scheduled two summer picnic/swapmeets this year! Visitors are always welcome!

The first picnic is Sunday, May 17th, 1998.

The second picnic is Saturday, September 6th, 1998.

Both picnics are at Paul Schroeder Park in Manchester, MO (suburb of St. Louis).

This is a family event and you are welcome to bring your spouse and children. These are our two swapmeet events of the year and nice surprises are often found on the swap tables.

There is no charge for swapping but please be sure to bring your own swap table. There is a requested $3.00 per person donation to cover the cost of the picnic.

More details and directions as the dates get closer!

For more information, please contact me at keymaster@stlnet.com

I have a new condition solidstate EEB dip meter model DM-4061, no manual. Coverage 1.5mhz to 250mhz. Includes all coils. Will trade for a HeathKit SB-600 speaker in good physical condition.

Also have an EICO grid dip model 710 will consider trading.

I also am looking for an Allied SP-190 speaker that goes with the SX-190 or AX-190 receiver.

# 1861. FS: or info on Western Electric 18B Radio Receiver

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-02-05 00:00:00 UTC
From: bharrison@earthlink.net
Message-ID: <bharrison-0402981955170001@1cust209.tnt17.tco2.da.uu.net>
Source record: 110665

Hello,

I have Western Electric 18B Radio Receiver, sn# 482, for sale
(or I would appreciate any info on the same)

asking $100 plus shipping from zip 28037 (near Charlotte NC)

This is a 7-tube (41,75s, etc), "mobile" (I would guess)
single frequency crystal- control AM receiver - plugged into the front
bottom corner of the front panel (under a round metal shield that sticks
out 3 inches or so) is a large Western Electric 3-prong type 5B crystal
sn# 6555, on 11883.330 kcs.

The set is 9.25 wide x 7.25 high x 6.25 " deep.

There is a 8-prong octal connector on left side for connection to power
supply (I assume - don't have), and an antenna screw-on connector and
toggle switch on the right side.

The front panel is rectangular, shiny black with art deco trim, speaker in
the middle, a single on-off volume knob in lower left corner of the front
panel.

My guess is an aircraft or highway patrol radio of late 30s vintage?

Very well made, well shielded, cabinet is dull black/grey with ventilation
holes on top and rear...

thanks, and regards,

brian

Yes, it is an interesting radio, offered SSB reception and highly accurate calibration. Shown in Fred Osterman's book as Model 445E311a.
It is in 18 tube radio, but only 3 different types! (Made keeping spares at sea an easy matter).
I have one which I am rebuilding.

>and a black ARC-5 R24,
>and was curious as I have never heard of one.

Ray:
I have a black-wrinkle BC-946 made by Colonial
(which later became Sylvania).
This one may have been factory-converted from a BC-453.

Besides the obvious IF, RF and BFO coils, there are several
component differences between a 453 and a 946.
Ray Mote in Oxnard, Ca worked very hard to compile a list of
Command Set receiver component differences, and this has
been an invaluable tool for me.
I always check these to make sure I've got a "real" 946
and not a re-coiled 453. The great majority of 946s
were destroyed by tinkerers, so an original BC-946
in unmodified condition is very prized.

In my black unit, these components look like they may
have been changed in a very professional manner.
The contacts have also been laquered, and that laquer is
the proper age and type. These changes are very likely
factory-original. This unit was missing the adaptor
drawer when I got it. I wonder if they re-painted
an FT-310 power adaptor for this rig or just used
the usual aluminium finish.

I would guess that the production line needed to complete
a quota one day and this was the quickest way to do it.
In any event, black-wrinkle BC-946 receivers are very rare.

## 1878. Another word on"black beauty caps"

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-02-05 00:00:00 UTC
From: Cal Eustaquio <ceustaqu@joule.ee.calpoly.edu>
Message-ID: <Pine.GUL.3.95.980205074429.13525A-100000@joule.ee.calpoly.edu>
Source record: 110682

A previous post asked with these caps were. They are vintage plastic capacitors notorious for leaking and shorting out in some '50s and '60s BA rigs. I had a recent experience (2 days ago) that happened with one of these imps. I recently put one of these Colorado AC/DC sets on line to test out (and initially everything looked ok). However, I noticed that the bottom cover had some white ooze that hardened. I didn't think that it was of any consequence, mistaking it to be some adhesive or some other thing like that. I noticed one of those black beauty caps that was split almost its entire length sitting on the power bus! But the radio was playing and I assumed nothing was wrong. However, 5 minutes later, the radio started to crackle. Sho' 'nuff, that cap started leaking its miserable innards again. I shut the radio off and intend to replace that cap with something heartier. I also had something like that in a Ranger I use to own. It shorted out in the keying circuit after several minutes of warming up. Turned out that the 12AT7 keying tube was radiating heat to this guy and eventually caused it to short causing the rig to self key. That was replaced by a disc ceramic. So replace them black caps ASAP!! Cal, N6KYR.

# 1880. Re: Help! Valiant misbehaving during CX!!

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-02-06 00:00:00 UTC
From: paul@actiontel.com
Message-ID: <34db6b4c.549664913@news.abilene.com>
Source record: 110486

Brian, I am by no means an expert but I have been working on my Valiant diligently for about two months now. I won't go into all the different problems I have had but a high voltage arc that I spent boo coo time getting rid of. The 866 rectifiers were arcing. You may have solid state rectifiers in which case this is moot but after changing the sockets to porcelain, and it still arcing, I raised the sockets 3/4" of an inch above the chasis. and got rid of the arcing.

It sounds very similar to what you described. I thought I had a transformer arcing also. Jolts the hell out of the cabinet doesn't it.

Definitely scary stuff. You may find some scorching around the bottom of the sockets or even at the top but you may not. Out of the cabinet, on it's end, bottom facing you, key it and let it go until you see the arc. That's what I had to do. (Get's kinda monotonous sitting there for 15 to 20 min. watching, but it worked) Keep your eyes on the bottoms of the 866 sockets. When it happens it's quick.

Spoke with KH6U, Doug, in Kailua, Hawaii last weekend on 10 Meters and he had the very same problem with his Valiant.

Also just a passing comment. The 140 volts you are seening on R16 is the same voltage you will see on pin 5 of the clamper and pins 3 of the finals (screen voltage on 6146's) Mine is exactly the same with R13 maxed out. In the voltage chart of the manual, it says we should be seeing 180 volts. Sure would wake those 6146's up if one could pump up the screen voltage to the suggested 180 volts. Whada ya think?

Hope this has helped some..

> Jeff KH2PZ

Yes, Mackay bought out Federal around the WWII time. I have a
Mackay 128AY receiver with a manual that says Federal and also
``Same as Federal Model xxx Radio Receiver'', too. I also
have an ITT transmitter that says Federal on it (1953 design).
My guess is that Mackay bought Federal and was bought out by ITT
and later divested to become Mackay Communications of today, across
town, still making marine and commercial radio gear as far as I can
tell. I am not exactly sure of the dates and changes, but I could
probably find out if noone else does. I have always thought it would
be fun to work there..... someday.....

It would sure be neato to see that 167-BY ply the HF ethers again....
Alas, few folks know how to make it play anymore (except me, mebbie)....

Any radio of that vintage is certainly going to need some
serious recapping. Recapping the RF compartment is guaranteed
to try your patience.

Take a look at it. But $250 sounds way too high unless it's
been properly restored.

Hello,
I am looking for capacitors. . I am recapping my collins gear. . I am in need of electrolytics. .for example, I need a 40 uf at 150 Volts. . I also need ceramic disk capacitors. . I am looking for the stable ones with around 10% or less in variance. . .I would love to come across a good bulk price deal . . this buying them individually is nickle and dimeing me to death. . let me know what you have and how much. . thanks

# 1896. Hallicrafters Pkg.-San Francisco only

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-02-06 00:00:00 UTC
From: Danny Goodman <dannyg@dannyg.com>
Message-ID: <34DBE8A8.4718B37C@dannyg.com>
Source record: 110502

For Sale: Three Hallicrafters Receivers and One Speaker
---
The following four items are being sold as a package only...and only for pick-up/meet on the San Francisco Peninsula (I'm near Half Moon Bay). This is a reposting at a much lower package price: I need the space and don't have the time to sell these one-by-one.

And now for the story...
---
Unlike the guys who sold these items to me over a period of time, I'll give you the straight poop on their condition (selling them with buyers' eyes, so to speak). I'd hang onto them if I knew I would have the time to clean them up as they deserve and could spare the space they now occupy.

SX-100 Receiver
This is the worst-looking but best-receiving unit of the list. This receiver is hot as a pistol, even with a dinky indoor wire antenna. All original knobs (could use cleaning). Both dials and dial strings in great shape (just a smidge of backlash). S-meter is cloudy but readable. Some minor rust on front panel bottom. A 1/8"x1/8" irregular chip in light grey paint above front left dial. Scratches (not deep) on dark grey trim ring. The lid is dirty and/or discolored (it may clean up nicely). Inside, the unit is quite dirty, with evidence of the radio having been stored (before I got it) where woodwork had been performed. Crystal calibrator installed and working. Does not receive LSB, but I have some extra calibration notes about what the problem may be. Includes recently acquired W7FG manual/service guide/schematic. Other than apply power and check its receiving quality across the spectrum (and have it entertain me while doing some grunt work in the shack), I have done no work on this unit.

SX-62B Receiver
Excellent sounding receiver, with sensitivity approaching that of the SX-100 described above. All original knobs. Very minor wear marks on front panel. The huge glass dial is in excellent condition, but with a fair amount of slide-rule backlash, which may be fixable with re-stringing or adjusting the dial. Minor scratches on the black trim ring top and sides. The front center of the lid is slightly deformed downward (about 1/16") but not dented. The top of the lid is discolored/dirty in spots (may clean up fine). Inside, the unit isn't too dirty. Crystal calibrator does not function. I had this unit as my (rather large) bedside radio for awhile. I have performed no work on this unit. Includes recently acquired W7FG manual/service guide/schematic.

S-120 Receiver
This unit hears as well as I would expect an S-120 to hear. Pulls in the majors, at least through 16MHz. Could use a recapping to get rid of the hum.

All original knobs (very tiny dent in the Bandspread knob's chrome insert). Dial glass is excellent and the slide rule dial is also fine (perhaps a bit stiff--hey, this isn't a flywheel-and-counterweight kind of rig). The bottom front metal panel shows some minor scratches except for what look to be strapping tape marks (idented and not removable) running vertically along the left edge for about an inch long. Original telescoping antenna and connector bracket included. Light grey cabinet appears to be original paint, with typical scratches; chrome trim ring in very good condition. I cleaned up the innards (no liquids used), and discovered all original Hallicrafters tubes. Comes with photocopies of schematics, manual, and "Your Guide to SW Listening".

R-46B Speaker
Some scratches on the edges of the front panel and rub marks on the raised "h" grillwork. Fuzz on speaker grill is worn in several places. Small cabinet dent on the top in the front left. Sound is OK, but I didn't spend a great deal of listening time with it to give it a critical audition.

Asking price for entire package in USD: $225.00

I will also consider trade for tube-type 5-band SSB/CW amateur transceiver and power supply in excellent condition (on the order of a National NCX-5, Hallicrafters SR-150, or Drake TR-4).

These radios offer both immediate enjoyment and the prospect of rewarding projects preserving one of the finest U.S. brands of yore.

Hello,

I am looking for a AM-2060 audio amplifier/power group with the "dogbone" interconnect cable. These 2
items together comprise the AM-3633, and are used with the PRC-25/77 series radios in mobile installations.

Also, looking for a clean, working R-442 or R-442A receiver at a reasonable price.

Thanks,
Ned - N3LKT
Eastern PA

I have the following Radio, and electronic equipment for sale. Reasonable offers or trades for radio and High End computer EQ. will be considered. All working last time tested unless noted. Shipping is extra.
Thanks

• Tempo-1- Tube type Ham Transceiver/with Power Supply 80-10 meters. Looks good and works well. 100W output. $200

. Motorola VHF Transceiver All tube Model: PA8270J SER.NO: 8697. It receives on 150.750 & 150.570 and transmits on 160.025. There is also a tone Signal and intercom control on front below speaker. This is the type transceiver that was used by police and fire dispatchers in the past. Don't know if it works. $80

• Grubndig Model 2066 AM/FM/SW all tube receiver. Nice wood cabinet. It isn't working. $75

• Heathkit HW 101, 80-10 meter transceiver. No Power supply. It is receiving, but don't know about transmit. Not able to test. Looks are 7/10. As is $100.

• Siltronix VFO Model 80. $75

• National Two/Seventy Ham Receiver with 6 Meter band. All Tube with matching speaker $225.

. Hallicrafters Model S-108 SW Receiver with a calb. Ham band spread. Looks good works well.$100

• MFJ Rtty/CW Computer Interface Model MFJ-1224, used for copying code from the radio to your computer. $50

• Pearce Simpson, Guardian 23- All tube CB Transceiver/with mobil power cord and mounting bracket. Looks and works Good. $125

• Traynor, Group Two B- Audio Amp Head. High/ Low mic. in puts. Master volume, volume, bass, treble and tone shaper controls. $150

. Channel Master- Tube Stereo Receiver (Model 6612) and matching amp (Model 6601) Looks good and plays on FM. AM not working. $125

• Sams CB Photofact- Several volumes, some continuos: numbers as follow: Continuos 1- 55 and 57- 65. Individual 70,72,80,88,93,98,104,120,122,128 178,190,226. Also have some two of same number. $4 each. Special discount price for all.

• AR Inc.- Stereo Amp, all solid state. $125

• Yashica Eletro 35- 35MM Camera with Telephoto 1:4 , Wide Angle 1:4,Tele-wide finder lense and flash attachment. $100.

# 1903. National crystal filters

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-02-06 00:00:00 UTC
From: larry@no.spam
Message-ID: <34da784a.29035983@news.pipeline.com>
Source record: 110563

Good evening folks....
Tonight I pose a question (or two) concerning the Lamb type
crystal filters often found in older National radios.
The radio currently on the bench for resurrection is a NC-2-40D,
a fine old example of Nationals coil catacomb line.

Anybody had any luck repairing the crystal filters in these things?
Mine has zero output when selected. I mean nada... +7 Dbm fed into
it less than 5 millivolts out on the scope... (down in the noise)

I'm hoping to find a simple open connection inside when I finally
get time to tear the whole assy. out. (not easy!)

National barely mentions these things in the manuals, kind of like
the old maps with "here be dragons" in blank areas.... :-)

I have found several references to articles in old journals, even
have the one about the filter in the 80/81X line.

Any advice, thoughts or comments from anyone who has been inside
one of these would be appreciated...

-Larry

The 4 you are asking about are just normally closed when the function switch is in standby, then when you trun the switch to AM/CW-SSB they open. If you own an Ohm meter you can figure it out faster than you can ask for help.

TGIF

I have an SB-303 LMO that work great above 5.3mhz but has awful oscillation of about 500khz when below 5.3mhz and the frequency drops to below 4.6mhz at that point. Has anyone else seen this problem? Does anyone have a schematic and tune up procedure for this LMO?

tnx.

Ed AA8TV

# 1917. mercury tuber tester model 201

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-02-06 00:00:00 UTC
From: jukes@mindspring.com
Message-ID: <886722991.333643784@dejanews.com>
Source record: 110577

I have a Mercury model 201 tube tester/storage cabinet and need the charts that go with it or any instructions, schematics, paperwork etc.... Does anyone have any idea where I might find some of this info? I restore jukeboxes from the 40's and 50's in my spare time and am wondering if this tester would be suitable for most of the tubes I test. Can anyone help? Thanks, Joe.

Hi all;
Just saw in my local paper a ad for a 1947
Hallicrafters SX-42...off a scrapped destroyer escort.
asking $250/BO...I'm not familiar with it..if its
working and gud condx is it worth anything near that price?
what would be a fair price to offer?
I'm curious as it is in the same town as me so shipping is not
a factor. many tnx for your input. Oh yeah, the phone # in ad
is 717-491-5848 location is Matamoras,Pa on border of NY,NJ,PA.

The usual and original M-1070 supply is usually not found by itself, but is not anything elaborate. All the cabling was left to the buyer to make up anyway, as these were sold primarily for mobile use where every installation was uniquely configured. You can power them with anything that meets the voltage & current requirements, and a small SS homebrew would be a cinch - especially since you don't need the 6/12VDC capability of the 1070 (it was trisexual and did all three). All you need are the correct and common Jones plugs, if you don't already have them. You'll waste time looking for the original supply, and it is nothing to rave about. You'll be lucky to get 25 real watts of screen-modulated AM out of it, but it will sound nice enough if you've gone through it.

Frank

# 1923. WTB: Heathkit AD-1308 Spectrum Analyzer

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-02-06 00:00:00 UTC
From: DataPro@vom.com

I'm looking for an old Heathkit AD-1308 Audio spectrum analyzer. If anyone has one laying around out there, I'd be willing to purchase it. I know, I know, I obviously have more money than smarts, but hey, I just would like to have one. A "non-working" but salvageable unit would also be acceptable.

Thanks and Regards

Don Peterson

I've been out of radio for many years, and it's time to sell all my old treasures.
For Sale:

* Complete Yaesu FT-101E station, with extra 11 meter mod, AM filter, FV-101B external VFO, and YC-601 Freq Counter. All is perfect except the counter stopped working for some reason.

* Yaesu and Standard 450MHz business band tranceivers, with CTCSS boards.

* Ritron Responder 10 watt VHF repeater with factory phone patch and handheld radio w/ dtmf pad.

* 2 Johnson Viking Rangers, with PTT. One is completely rebuilt and very trick.

* Johnson Courier KW amp for the Ranger.

*** For enough money, I might part with my vicious Johnson Viking Valiant or my Johnson Viking 500!

* National NC-300 receiver.

* Collins 390A receiver.

* Golden Falcon 400 mobile amp- custom flip-top case, backlit panel meter, etc.

** 2 classic Hy-Gain "Footlocker" mobile amps, one with custom remote control head.

* Nice, short equip rack for above with military slide-out drawer slides.

* Miscellaneous old radio gear like Johnson transceiver tester, Diawa CN-720B pwr/swr meter, some Johnson parts, etc.

* 2 very nice Panasonic 49 MHz 2-line cordless telephones with speakerphone, speed-dial, etc.

** Cobra 148GTL with DigiScan unit, Cobra 129LTD.

I'm in the San Fernando Valley (Los Angeles), California area.

# 1927. Swan 260 Tuning

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-02-07 00:00:00 UTC
From: tech <tech@dp.net>
Message-ID: <Pine.BSI.3.95.980207162747.1947D-100000@home.dp.net>
Source record: 110438

Hi,

Thanks for reading.

I am in DIRE NEED of the tuning "chart" meaning the coil/capacitor layout for the Swan 260. The manual specifies how to tune it, as in repair (NOT OPERATING) but gives no hint as to which coil is which or which capacitor is which. Example (not exact book words): Manual says tune L101 for peak on ten meters. WHICH COIL is L101?

The coils/caps in this unit, except those in the VFO CAGE, are
NOT marked either in the rig or the book. I'd hope that I wouldn't have to resort to tracing the schematic out coil by coil, capacitor by capacitor.

Any help would be appreciated HIGHLY!

Reply to Tech@DP.NET

Thanks.....

# 1928. Collins Equipment For Sale (KWM-2, KWM-1, 75S-3C)

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-02-07 00:00:00 UTC
From: "Dr. Edward H. Scissons " <psa@sk.sympatico.ca>
Message-ID: <01bd3413$e08e7f60$0c55a58e@scissons.sk.sympatico.ca>
Source record: 110439

The following COLLINS equipment is for sale. Equipment has been securely stored for the past several years and was operational when stored. All equipment is sold with a 7 day refund policy, less 2-way packing, shipping and insurance charges. Send email requests for JPEG scanned image of all 4 pieces.

Offers in US dollars will be received on these lots until 12:00 noon CST on Sunday, February 15, 1998. All equipment subject to prior sale. Highest or any offer may not be accepted.

Buyer is responsible for pre-payment by money order or bank draft in US dollars of purchase price plus packing, shipping and insurance. Equipment is located in Western Canada, approximately 300 miles North of the Montana/North Dakota/Canada-US border. Shipment by UPS or TBA.

PLEASE PHONE OR EMAIL FOR ADDITIONAL INFORMATION.

Lot #1: KWM-2 Winged
Serial Number: 12535
Spinner Knob
No scratches on panels
No rub marks on panels
Includes Collins manual
Includes 516F-2 AC power supply

Lot #2: 75S3-C Meatball Complete with Collins CW Mechanical Filter for 75S Receivers (Filter: F455PA FA05 6735 (526 9494 00)
Serial Number: 13572
Spinner Knob
No scratches on panels
Minor rub marks on front panel
New original equipment dial front has been installed (old one also supplied)
No extra filters
Two screws on dial front may not be original
No extra crystals installed
Recently gone over by technician
S-meter appears erratic in operation
Includes Collins Manual

Lot #3: KWM-1 Winged
Serial Number: 791
Rub marks on knobs
Includes 516F-1 AC power supply (Missing 4 side panel retaining screws for PS case and one small extra hole (1/4") has been drilled in the top of PS case)

Includes tubular lo-pass filter mounted on back of KWM-1
Includes Xerox copy of manual

Lot #4: KWM-2 Winged
Serial Number: 331
Non-Spinner Knob
No scratches on panels
No rub marks on panels
Zero set does not work (dial cord slipped off)
Includes Collins manual
Includes 516F-2 AC power supply

# 1933. Antique McMurdo Silver Micromatch question

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-02-07 00:00:00 UTC
From: Carter Grabarczyk <k8vt@ameritech.net>
Message-ID: <34DD16E9.E07F7D9B@ameritech.net>
Source record: 110444
Cross-posted to: rec.radio.amateur.boatanchors,rec.antiques.radio+phono

Ran across a "Silver" Micromatch, Model 908, marked 3-30 mc, 1 kW, manufactured by McMurdo Silver. As near as I can tell, it appears to be a pre-war SWR bridge for open wire transmission lines. The front panel has two porcelain input connectors and two more for the output. It has a large meter and two controls. One is a pot marked "sensitivity" and the other is a small APC capacitor that is marked "impedance" and is calibrated from 1 to 500 ohms. The meter is marked for SWR. There is no "forward-reflected" switch (as in never there from the factory, not just missing in action due to age or modifications). That leads to question number one- how did one set the sensitivity control? Reverse the antenna connections, set for full scale and then reverse the connections again?
Question two-what was the purpose/point of the "impedance"control?
Question number three- what might this beastie be worth?
Thanks for any and all responses...

Hi Solomon
The GRR-5 was still in wide use even in the late 60s in California Army National Guard units as a command liaison receiver and was often mounted in the 3/4 ton weapons carrier along with the GRC-9 and later the GRC-19. Also saw service mounted in 1/4 ton jeeps along with the GRC-9 set. The multi-voltage power system made it nice for all kinds of combat/ training environments allowing company commanders to monitor their operations from a fixed bivouac CP without tying up the prime mover. Great little receiver--have one to restore one of these days if I can find the lower power supply deck as mine's prior owner stripped the damn deck out and made an attempt to FIX it. Oh well, there was surely some grand plan i the works for it..but now it is just another Beeengunnnna...

I go to the local sporting goods store and buy
the heavy black braided bait-casting line..you
can get it up to 70 lb. test. works better than
original and haven't had a slippage problem...
also you cant tell it from original black line.

# 1974. Yaesu FT-301D on WARC bands?

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-02-07 00:00:00 UTC
From: Scott Gray <comm5@pacbell.net>
Message-ID: <34DC9C96.4BBCBD12@pacbell.net>
Source record: 110530
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.boatanchors,rec.radio.amateur.homebrew

I have the opportunity to pick up a Yaesu FT-301D HF rig at a very attractive price. My interests on HF include the 17 meter and 30 meter WARC bands.

The rig does have a "AUX" position on the band switch, and I would be (reluctantly) willing to give up 15 or 20 Meters. Also a JJY/WWV is on the band switch.

Anyone ever successfully get a FT-301D/S to work on 17M and 30 M? Just a mixer xtal change??

Any constructive input would be appreciated.

Thanks

Scott KD6CQ

Source record: 110387

Beware when checking out this receiver. It has a mechanically complex band change mechanism, which if not working absolutely perfectly now, will cause you to pull out any hair remaining on your head if you have to fix it!

Seriously, if the receiver works very well, on all bands and the band change mech. operates smoothly, it is probably worth $250. If not, I'd pass or pay no more than $100 (depending on condition) as a parts radio.

# 1982. Moving Sale - budding BA collection available in Milwaukee

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-02-08 00:00:00 UTC
From: Chuck Hallett <w7lds@usa.net>
Message-ID: <6bl64e$jhv@newsops.execpc.com>
Source record: 110389

In anticipation of a move from a house in Milwaukee to an apartment in San Diego, I have been forced to face reality in regards to my desire to own every boatanchor I ever saw or operated as a teenager. As a result I have decided to keep only my RME-45 & Knight T-60 (WN7EGZ original station) and to part with the following:

Hallicrafters SX-101 MK II (160 meter model)
Heathkit AT-1 in good condition
Heathkit AT-1 which was highly modified and includes homebrew modulator
Heathkit DX-20
Heathkit VF-1 VFO with homebrew power supply
ARC-5 Transmitter 3.9 mHz model
Sprague Capacitor Analyzer
Bird Wattmeter (painted black w/N Connectors & 25 wattt 200-500 mHz slug)
lots of miscellaneous stuff

I am posting it here in hopes that someone would be interested in picking it up as a lot sale. I have not decided on a price, but would be very open to offers on the lot, as I am moving in a few weeks. I WILL NOT SHIP!!! I don't have the time, expertise or desire to see anything damaged.

I work in Detroit during the week and commute to Wisconsin on weekends, so I might consider transporting the lot to Toledo/Detroit area or points in between. If I don't sell it before leaving, I will take the lot to Radio Recyclers of Milwaukee.

I can be reached by phone during the weekends @ 414-352-3709
during the week during at working hours @ 313-586-1068 (no evening phone)
email to w7lds@usa.net

Hello to All!

I am selling most of my Drake gear, and in addition to the large C-Line station that is for sale, I have another Drake C-Line for sale that was just aligned and neutralized and works perfectly. The set includes the T-4XC, R-4C, MS-4 and AC-4. The R-4C has the 1.5 kHz CW filter installed and the T-4XC includes a spare set of used finals. This C-Line is in excellent condition and has very high serial numbers (R-4C = 25,908 and T-4XC = 29,837). The cabinets are in very nice shape and the front panels and chassis are excellent. The Transmitter output is 160 Watts on 80m and 120 Watts on 10m. Asking $550.00, please feel free to contact me with any questions!

Thanks and 73's!

Hi, some comments

Some of us we are aware that those big pieces of radio are never going
to be built again, at the same time we understand their electronics, and
specially we could not afford them at all some years ago.

Just think that in the 50's 60's the cost here of a Collins Transceiver
was more than two years average salary, there was a real big difference
in purchasing power between USA and other European or Asian countries, I
think now we are more leveled.

And now there is internet, and UPS, and more transport and money sending
facilities, so you see the prices going up in USA, but we see the
possibility to afford something we allways saw like an "american dream"

I have Volume 12 (1956) of CQ magazine for sale. All magazines are in very good to excellent condition. All have front and back covers, and there are no tears anywhere. I'd like $25.00 for the volume, plus shipping from the Chicago area. It's a real kick reading the various ads in the magazines; it's for lots of the same gear we're using now!

Here are some of the titles found in the issues.

Jan - "Hallicrafters HT31 Linear Amp", "The Mighty 50B5s (a three-tube transmitter project using three 50B5s)

Feb - "600 Watt P-P 813 Final Amplifier", "160 - Simple Transmitter"

Mar - "75 Meter Rotary Beam", "The Sunspot Story: Cycle 19 (Once in a lifetime conditions)"

Apr - "New Class A2 Screen Modulator", "20 & 40 Meter Rotary Dipole"

May - "Grounded Grid in Full Dress", "The S-9er (plug in modification for improving entry-level and low-end receiver front-ends)"

Jun - "75 Meter 'Shorty' Ground Plane", "21-mc Preamplifier", "Signal Separation (article describing installation of Heath QF-1 in Halli S-40)

Jul - "Low Capacity Transformers for Grounded Grid Applications", "CW Filter Limiter"

Aug - "Improved S-9er", "20 Meter Capacity Hat Beam", "DX-100 Keying"

Sep - "Make Your Own Coax Switch", "BC348 Selectivity Improvements"

Oct - "DX100 Modifications", "Updating the Viking"

Nov - "CQ Reports on the Morrow MB560", "CQ Reports on the Viking Pacemaker"

Dec - "An Outboard S-Meter", "KWS-1 Modifications", "Bandspanning the Super Pro"

Please respond to jvercellino@sprynet.com. 73, John WB9OVV

It's a bastardization of the French phrase beaucoup that saw extensive
use in the sixties and early seventies by American military personnel
in southeast Asia. Literally in French it means a handsome stroke or a
good move. We used it to mean a whole f'ing lot of whatever.

I would have expected that this era tuner would have been set up to read current in each leg of the feedline. The goal would have been to get the line balanced, as in "balanced line." The cap, then, might be used to effect the needed balance.

# 2023. HQ-170 for trade

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-02-09 00:00:00 UTC
From: wally@mindy.sys.sdl.usu.edu
Message-ID: <hs2r9GFnI+h7@cc.usu.edu>
Source record: 110337

Greetings,

I've just picked up an HQ-170 surplus to my needs.
It's condition? Generally dirty. No manual.

Front panel has corrosion. Water damage, I suspect.

I have another panel from my parts set HQ-170 I'll throw in.

RF gain pot is "tight", signs of corrosion on shaft and mounting nut.
I may have one from the aforementioned parts set.

Chassis is dirty, dusty. But will clean up nice. Dials are flat and clean.
The radio works! I've reformed the electrolytics, needs an alignment bad!
Clock works and the cover is intact. The setting shaft is missing.

What I'm looking for is one of the following:

Minerva Tropic Master receiver.

Knight Star Roamer receiver.

Heathkit HW-16 transceiver.

The trade set must be complete, working, relativly clean, chassis not bent, etc. I don't mind one that shows it's age, but don't want to have to re-paint, remove rust, etc.

Any takers??

Wally Gibbons

The s meters used upside down in some Johnson rigs when turned over
make a nice right zero s meter for an AR-88. Will need a redone scale
of course. Not too hard to do with a computer graphics program and
a laser printer.

## 2028. collins 618T

# 2036. For Sale List with Pictures

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-02-09 00:00:00 UTC
From: Bill <bill@halcyon.com>
Message-ID: <01bd34ef$f55bbca0$a5203fce@bill.halcyon.com>
Source record: 110404

I am selling some of the items I am no longer using. Each item on the list below has a hot link to a picture or pictures of the item. You will have to use the back button on your browser to get back to this message.

My terms of sale are as follows:
I will not ship outside the US.
Payment should be by cashiers check or money order.

You can view my high integrity rating on eBay.

You may contact me by email at bill@halcyon.com

Here are the items!

Index Laboratories QRP Plus

160-10 meter CW/SSB transceiver. This is the latest (last) version they sold. It has never been used in the field and has been used very little in my ham shack. It has a built in keyer and audio filter.

This rig runs some of the best full break-in CW I have ever found. It has a general coverage receiver.

It will come in its original box.

This is the best QRP rig ever made. The original cost was $695.00.

There is a brochure included. The manual is also there.

http://www.halcyon.com/pub/users/bill/qrp-fnt.jpg

Sale price is $525.00

Antenna Manual

The Antenna Manual was published by Editors and Engineers in 1948. It was written by Woodrow Smith. I like this book on antennas because it has practical antennas in it. It actually tells how to build them. It is not just a bunch of theory.

The cover has a water spot on it. The book is hardbound and 306 pages.

The table of contents has the following chapters: Radiation and Propagation of Radio Waves, Transmission Lines, Basic Antenna Theory, Low and Medium Frequency Antenna systems, High Frequency Antenna systems, VHF and UHF Antenna Systems, Receiving Antenna considerations, Coupling to the Antenna system, Measuring Equipment and Techniques, Antennas for navigational Aids, Index.

This is a great collector's item.

The link below shows one of the pages from the book.

http://www.halcyon.com/pub/users/bill/ant-bk.JPG

Sale price is $22.00.

MM-3 Keyer

This is one of the famous keyers from AEA. These are now collector's items. AEA has not sold them for about 3 years now. There won't be any more of these!

The keyer has more features than any I have ever used, memory, contest mode, contest simulator, serial number, paddle reverse, and much more. I have included a picture of the label on the front of the keyer that has a list of all of the functions.

The keyer comes with a manual.

http://www.halcyon.com/pub/users/bill/mm3-lab.jpg

The front of the keyer can be viewed at:

http://www.halcyon.com/pub/users/bill/mm3-fnt.jpg

The rear of the keyer can be viewed at:

http://www.halcyon.com/pub/users/bill/mm3-rear.jpg

Sale price is $165.00

Russian Keyer

To my knowledge there were 30 of these chrome beauties imported from Russia in 1991. I worked for the company that was going to import them from Russia. I kept 2 when the deal fell through!

These are 100 % chrome plated. They are very striking. The keyer is build into the base of the keyer. The keyer is rather low tech. There is no memory, or dot/dash completion.

I don't even like the feel of the paddle.

What I do like is having a unique keyer. Think of owning one of the 30 that were imported. This keyer was written up in CQ and if my memory serves me right was in Dave Ingraham's Keys book.

The paddle contacts are solid silver. The key weighs almost 4 pounds! It isn't going to slide around.

There are no instructions for the keyer. It was not hard to figure out when I made several of them work.

Here are 2 views of the keyer. The knob is the speed control.

http://www.halcyon.com/pub/users/bill/r-key2.jpg
http://www.halcyon.com/pub/users/bill/r-key1.jpg

Cost is $160.00

MFJ Morse Keyboard Keyer

This is the MFJ Morse Keyboard Keyer model MFJ-451. It is new and has never been used on the air! It was purchased for evaluation. That was done on the bench and it was never used again. I have no instructions for it!

MFJ says it has a 200 character type-ahead buffer and two 100 character message memories. It accepts an IBM style keyboard with the large DIN connector as the input device.

Here is a link to a front view of the keyer.

http://www.halcyon.com/pub/users/bill/mfj-fnt.jpg

Here is a rear view of the keyer.

http://www.halcyon.com/pub/users/bill/mfj-bk.jpg

Cost is $70.00

# 2040. How to reduce the output power (TS-520S)?

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-02-09 00:00:00 UTC
From: wonkioh@aol.com
Message-ID: <19980209045600.XAA21095@ladder03.news.aol.com>
Source record: 110408

Hi,
I just bought the linear amp using pair of 8874.
The manual emphasize not to use more than 50W of drive power but my
TS-520S has 100W output.
I know I simply decrease the mic gain or carrier level to reduce the power
but I want to limit the output power more definitely.
My question is " Can I just pull one of 6146B in the final circuit of TS-520s?"
or does it need some adjustment or modifications?
Any comment will be appreciated.
Tnx and 73...

Wonki, WM2X..

I've heard variously that the D stands for 'DIVERSITY' or for 'DESK' models. Both my AR-88Ds have a diversity AGC feed on the rear apron, though neither have the extra front panel control mentioned on a recent posting. Both mine cover Medium Wave BC band, not the LF maritime band. Im sure they are D models, as the original handbook I have clearly shorw a desktop case on the photos.
Perhaps there is someone out there that can explain all the variants for all time, before the confusion spreads.

One of my 88s has a very British Mod, using RAF components. The front panel has ben drilled to taske an extra phone jack, and the original mains switch has been replaced by a separate toggle. A small white celluloid plate gives the new decals and partially obscures the Bandswitch decal for the lowest band (YACHHH!). Does any one know why the RAF made these mods?

Does any one have an S meter modification for the 88D, which does not involve hacking the original components?

>but I want to limit the output power more definitely.

My tried and true procedure using a TS-450 is to do my tune up in such a way as to limit the power out under FSK, RTTY or CW conditions to that amount which drives the amp the the level that I want as my Peak power output. This seems to come out to about 40 watts, in most instances. I use the PWR control for this purpose, although I believe you could use the CAR control just as well. Frankly, I have not been able to determine the exact difference in use of these two controls, because the AM, FSK, FM and CW modes are the only modes where the instruction manual seems to make any reference to the CAR control. I have two power meters with LED type of readouts (very fast acting). I have used those power meters to determine whether or not peak output ever exceeds the full, key down output that I set up when tuning in FSK or CW mode. To the best of my knowledge and experience, it appears that when you set up this way, your peak output is limited to that value to which your key down level is set during FSK or CW modes.

>My question is " Can I just pull one of 6146B in the final circuit of TS-520s?"
>or does it need some adjustment or modifications?

The last thing that I would ever think of doing is to pull one of the tubes. I think there may be too many dependencies on the presence of both tubes for proper operation of the transceiver. For example, the interelectrode capacitances for the missing tubes may be a problem, and the control circuitry may be specific to the two tubes in such a way as to no longer be as effective with one tube missing.

The use of the front panel controls ought to be sufficient guarantee. However, I appreciate your concern, because on more occasions than I like to admit, I have thrown the full 100 watts to my pair of 3CX800A7's and that doesn't do their grids much good. Fortunately, the protective circuitry in the AL-800H seems to be pretty good.

In time, my conscious effort to avoid such misadventures, have turned into a solid habit of checking the drive level before transmitting and now it is just automatic.

# 2059. I Need info on Hallicrafters S-38C grounding, tune-up

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-02-09 00:00:00 UTC
From: kr4wm@bigfoot.com
Message-ID: <MPG.f492f95902b38cf989680@news.sccoast.net>
Source record: 110427

I'm looking for some information about this particular radio. I connected it to my station ground, and blasted the piece of wire I was using for ground into smoke trails. I then reversed the plug going to the wall, and it worked OK, but doesn't receive worth a pooh. It only picks up one very strong local station. Is this normal for an S-38C? I changed a .022MFd cap that was connected to the AC line inside the radio, because the old one was wet on the outside with oil of some type. Apparently, the chassis of the radio is connected (through some wiring) to the on/off switch. Is this correct? I have no schematic with which to troubleshoot, but I see that it has no power transformer, so I guess it's powered directly off of line voltage. Either the transformer was removed (doubtful- no signs there ever was one) or it never had one (looks like this is the case). I'm guessing that the neutral side of the power plug is connected to chassis, and will be putting a polarized plug on it to assure it can't be plugged in "wrong" again in the future. Someone has connected three electrolytics under some plumbing strap on the underside of the radio. This repair may be some "cobble-up" thing. I have no book to look at. Any help would be appreciated. Also, since performance seems to be suffering, I suppose that it may be out of adjustment. If anyone could scan the tune-up info from your manual and e-mail it to me, it would be most appreciated. Also, a scan of the schematic would be appreciated equally! I'm doing this repair as a favor for my ex-boss (retired after 35+ years as a firefighter!), and don't have any money to put into a book for it, because I won't be receiving any pay for fixing it. Thanks, -Web

I take it you grounded the chassis of the radio, instead of using the ground connection for the entenna, which is isolated from the chassis with a capacitor.

> I changed a .022MFd cap that was connected to the AC line inside

You should probably replace all of the paper capacitors in the radio; common practice for receivers of this age, especially the Hallicrafters ones...

Yes; it's a "hot chassis" receiver. The polarity of the plug is critical. Or use an isolation transformer between it and the AC outlet.

> Someone has connected three electrolytics under some plumbing
> strap on the underside of the radio. This repair may be some
> "cobble-up" thing. I have no book to look at.

Again, standard practice. That strap used to hold a multisection electrolytic capacitor that bit the dust much like the leaky paper one you already replaced. Those straps are riveted in, so people usually leave them in place and just pull the old capacitor out. The replacement electrolytics can be mounted wherever convenient.

Web,

You're right about the "hot chassis" on the S-38 series receivers.
Definitely install a polarized line cord to prevent the chassis
from being hot (and the operator from being FRIED) in the future!
There was no transformer in these sets.

The three electrolytics under the chassis are probably there to
replace the original unit, which was a four-section paper can
unit. There must be a fourth one somewhere. I am rebuilding
an S-38B and I made a similar repair to mine (neatly and using
good wiring and soldering techniques) using four individual
caps. This was easier and cheaper than trying to have a new
one made to replace the original.

I don't have a manual for the S-38C, but I'm sure someone will
offer you a photocopy of one for next to nothing. If you can,
try to get a copy of the Sams Photofacts folder on the S-38C.
It will give detailed alignment instructions and a good set of
schematics and parts list.

Good luck and 73,
Dean, K5DH

I don't know whether or not you 2A has a 'switch' above the band switch,
but this is what you use to change from the ham band xtal set
(installed) to the auxilliary xtals. The manual should give you info
re: the correct xtals for the various ranges. Also, if you can get your
hands on the mil xtal pack, CP-1, you should have a set of xtals fro all
frequencies within the radio's op range.

It's a real shame when some poor slob asks a
technical question on this newsgroup -- and ends
up being put down by a bunch of elitist asses.
No wonder this forum has degenerated into a
a "buy and sell" junkyard, instead of being the
discussion group its charter outlines.

A little levity and humor is great, but not when it
involves making fun of a ham for not knowing the
answer to a question just because he holds an
Extra class license.

Regards

Pete

The true shame is that someone can get an extra class license
and not know how to properly run a rice box with an amplifier.
So much for incentive licensing.

Interesting power adjustment methodes deleted.....

Slight tongue de cheekio.....(:+}}.....

Actually, I use a big 50 watt wirewound rheostat from the 1930's.
It works great up to 15 meters or so, and acts as its own dummy load.
Good use for old rheostatios.

> 5) Ask your XYL what chores need to be accomplished around the house.
> Output power will be reduced for a long time.

Gee I use this ploy to get the XYL to let me dive into the laundry room,
to ahh, er.... ``do the laundry, honey?'', where I can change loads
betwixt washer and drier (between QSOs, of course.....(:+}}.....).

> These are just some of the techniques you could use to reduce that annoying

> "Extra" or Novice.

> 73...Pat, WB9GKZ

Bob/NA4G

(don't laugh too much, because I do use that big rheostat to control the
driver power into the ``big rig''.... works just fine, if you understand
what it is doing and how to do it right.....).

[...]

It looks something like a hole plug (goofplug) with the Johnson knob on
it, painted in Ranger color. You could probably make a replica if you
can take a look at the original OEM part.

I built a Ranger kit when I was 15 years old (1954) and kept track of it
thru its new owners until a couple of years ago. Hope it's still working.

Good heavens..... I am sure that would not be what folks were intending.
There are a few ``elitist arses'' around, but they are everywhere,
including the internet. That is human nature.

> A little levity and humor is great, but not when it
> involves making fun of a ham for not knowing the
> answer to a question just because he holds an
> Extra class license.

One should never make light of what another fellow may or may not know.
What others may know or not know is often surprising, as well as enlightening.

It could be the other fellow has lots of book theory and may be a little
short on the practical seat of the pants experience. The exact opposite
is true, too. Also, there are a lot of newer folks that are just a little
short on both book theory and hands-on experience. That is fine, and
noone around here has all the answers all the time. It seems that often
newer hams have not had as much seat of the pants experience as the old
timers. That is fine. There are a lot of old timers like me that are
on the shorter end of the theoreticalisches stick, but who have a fairly
respectable seat of the pants experience. It all evens out in the wash,
and for sure, anthing that is said here in this list should always be
taken with two dashes of salt of the wouff hong. If anyone misteaks any humor
on this list too seriously, they should remember that this is the internet
and not the worlds best elmering group. It can serve as a starting point,
but should always be taken with a tad of skepticism or reservation.

One thing that is interesting on the internet (quacks and charlatans
aside) is the great diversity of ideas and approaches to solving a problem,
be it complex or simple. Again, two dashes of wouff hong salt are due.
Caveat and all that, to sort out the validity of any approach or idea.
That wisdom comes with time and experience ``in grade'' as we used to
say in the service.

As good or bad as it is, I am glad the internet is as loose as it is.
Too rigid, and it would not be very real. In the old days back some
15 years on the ``internet'' we used to have the old internet ``flack

suit'' kept hanging nearby. Although a little worn and dusty it still serves its purpose. The reality though is that it is not all that often used, anymore. That means that generally the ol' 'net is pretty calm and even, and only occasionally burps a flame of bile or two.

I think if we all take the internet not too seriously (and maybe with the wisdom of a chuckle or two therein) it can serve the amateur community well, and be a good public forum for ``elmerin'' the old fashioned way. Time will tell though.....

> Regards
> Pete

Well taken Pete.....

> Jack
> K4HNO

To some extent that is true. But, our responsiblity as real hams
is to ``elmer'' whomever needs it, along in the wisdom that was
``elmered'' to us over the years. The new licensing structures
have brought in a lot of new folks that generally don't have quite
the background that the early newbies had, and they have to make
up that difference, somehow, to become practical hams or more well
rounded hams. It becomes our responsibility as the old timers to
help this along as we can, and guide them in the right ways, or
at least provide them with suitable pointers and urls thereto, to
get started. The internet has its value as a place to find out
the starting pointers and urls and where to go next. Having been
around it for as long as Methusela, I would suggest that it only
is going to be good for pointers, and that the rest should be handled
in private or closed emails where details can be thrashed about at
length, and always taken with several dahes of salt of the wouff
hong.

Mebbie we need an internet elmerin' newsgroup or list or such.....

hmmmm...

CRT's. These appear to be new cathode ray tubes, some boxes still sealed. Don't know
what type of equipment these were used in. I'm sure some were for oscilloscope use.
Others probably some military application. Price listed does not include shipping from
Baltimore, Md. 4-3BP1@$5.00EA, 3-5FP7@ $7.00EA.1 ea of the following: 5CP1 @$7.00, 3JP1@$5.00, 5AXP4 @ $30.00(this is a general purpose TV service tube to hook up to a wide variety of B/W TV chs for testing) & 1-5BP1 @$7.00.
Thanks for taking the time to check this out.
John

The receiver itself is usually the most sensitive field strength meter
you can find. The problem is to find that portion of the circuit that
is a good indicator for received signal strength. If you have enough
power available to use just a simple 1N34 diode detector with a
sensitive voltmeter, that would be the simplest way to go. The small,
battery operated digital VOM's that can be purchase as cheap as $15 or
less, will have a sensitivity of a few millivolts. If your
transmitter is capable of 5 watts, for example, you will have no
trouble getting good deflections with a small whip antenna (a foot or
two long), a 1N34 diode and the millivoltmeter range of a VOM.

knitting machine - hence they were called "Woellenweber".

>I would build for my ship (steel sailboat) one SSB antenna . On the
>eightstay I have not good experiences.
Ich verstehe nicht "eightstay". Das muss eine falsche Uebersetzung
sein.

I know of amateurs who have used the "backstay" as an antenna. (d.h.,
the steel cable that runs from the Stern (of the boat - nicht Sternen
wie im Himmel) up to the top of the mast. They have reported very
good results. The steel hull of your boat will enhance a "ground
plane" vertical. All you need is a proper tuner or transmatch to
match the impedance of the backstay to your transmitter. You should be
able to operate on any frequency from 6Mhz through 30MHz.
40M, 30M, 20M, 17M , 15M, 12M and 10M. It is not a sufficient antenna
for lower frequencies unless you provide some capacitance or "top hat"
loading. (d.h. viele quadratmeter auf der spitze).

>It gives in the ship accessory SSB antennae those are approx 4 to 6 m of 1,6
>to 24 MHZ long the entire maritime mobile service field and for the entire
>maritime mobile service field

>Now my question:
>Since these antennae cost approx 600 DM would like to build themselves.

A good tuner will cost less than $140 for power under 300 watts. The
insulation of the backstay from the mast and the hull is mechanical
problem.

> I know of amateurs who have used the "backstay" as an antenna. (d.h.,

Yup, the computer got that wrong, and I'm pretty sure he did in fact mean `backstay'. The backstay is called `Achterstag' in german, and `acht' is german for the number `eight', which is how I suppose the rather linguistically challenged virtual babelfish that did the translation came up with `eightstay'...

[Auf deutsch und in k"urze: Das Achterstag hei"st `backstay' auf englisch]

As an aside, I once took a paragraph from a german newspaper and munged it through the translator that's available on alta vista, translating back and forth between german and english (yes, I was bored). Surprisingly, the iteration actually converged and resulted in something that vaguely resembled modern poetry, but didn't have very much in common with the original passage. Anyway...

> Any comment will be appreciated.
> Tnx and 73...

> Wonki, WM2X..

You pose an interesting question with probably lots of workable solutions.
I will list several that I use, not in any particular order.

1. Lets assume first that you actually want to run, for whatever reason,
the TS-520 at full power.......

For starters, I would opt for an ancient kludge technique of putting a
50 ohm glowbar in the input of the amplifier. That can be done by
taking a coax T to a 50 ohm load, or by actually installing a glowbar
in the front end of the amplifier. That will approximately divide the
drive power output from the TS-520. I use a modification of that basic
technique on my TS-140S of taking a plain old 50 watt 100 ohm variable
resistor and using that as a power divider. Kludge galore, but it actually
works just fine on my setup up to 15 meters (I have not tested it on 10).
The RF theorists will say it won't work, but what the heck, I won't
let them know mine does just fine. The TS-140S has a real nutso drive
control that is either all on or all off, and I needed something finer
to control with. The rheostat was what I chose to use, although a
T and a dummy load worked where no control was wanted with lesser input.

2. Lets assume you want to run normal drive, and not modify anything.....

Being that you have an older rig, using a pinet output and tube finals,
there is an easier way that will work most of the time.... don't load
up the final on the TS-520. Keep the loading capacitor fully meshed.
That will reduce the input impedance into the amplifier since the pinet
won't be exactly 50 ohms, but, since it is lower than 50 ohms that won't
really matter. How much it will work may vary, and be band dependant.
But it does work, and I use that technique on a 1930's commercial rig
so I can walk it from 200 watts down to 10-15 watts (coupled with variac
control of plate voltages [you should not use variacs on your TS-520]).
Unloaded I get 50 watts out (compared to its normal 200 watts out) and

coupled with the variac I can walk it down to about 10-15 watts for meeting FCC minimal power requirements, as needed. The principle works just fine.

An alternative would be a pi-net tuner between the rig and the amplifier. It does basically the same thing, i.e., to unload the final of the rig, and keep the drive down to the amplifier. All the output capacitor is doing is acting as a power or impedance divider into the ``antenna'' or the ``next stage amplifier''. There are several other configurations of link or capacitively or inductively tapped ``tuning'' networks that will do the same thing. All work the same, in principle.

An alternative would be a torroidal tapped transformer, such as is used on military equipment to finely adjust loading impedances. It would be more than you probably are wanting to do, but can be done with the right parts. I run this type of adjuster on a large shipboard rig, and it works quite well there, too, to limit drive to the ``amplifier portion''.

3. Lets assume you actually do want to lower the power of the TS-520 by reconfiguring the final stage......

For starters, removing one final tube usually works fine, if you don't overdrive the remaining tube. I have done this several times in older rigs, and (contrary to what the theorists tell you) it works fine. This obviously works only in parallel tube finals (PP only with tricks). You will need to consider what it does to the output tuning of the TS-520. Generally by pulling a tube, you will increase the plate impedance of the amplifier. Practically, into the average pinet output section, and especially if driving an amplifier where you are not trying to squeeze all the power out of the 6146 that you can, it will make no difference. There may be some alteration of neutralization that will need to be adjusted. There may be some alteration of tuning ranges at band edges, but generally there is enough slop there that it should probably work fine. Back in the olden days, this was quite commonly done with the old ARC-5 transmitters to use them as vfo's. The principle works fine. Be careful of any loose dangling plate caps. I unsoldered mine and wired them to the sheet metal where they would always be there for reversing the mod.

An alternative is to use a different tube in the final amplifiers. If the voltages are not too high already, you can usually substitute 2E26's for 6146's and reduce the output power. You need to be careful if you do this since the 2E26's are not rated as high voltage as are the 6146's. I don't offhand remember the plate voltages on the TS-520, but if they are down within the acceptable 2E26 ICAS limits then they should be dropin replacements for lower power. I have done this in several novice rigs where I wanted to reduce the power, and it works fine. SSB suitablity of the 2E26 may not be quite what the 6146 is, so it could produce some distortion effects if overdriven. You would have to test this out to be sure. I would expect the effect to be minimal. On CW it would work fine.

When it is all said and done, I would try 2, above first, and then go from there.

As you can see, there are many ways to do it. Each works fine, if you understand what is required to make it work, and how to make it work. I am sure others will have their own pet methods of doing this, and I am sure some will probably chuckle at my methods, but, what the heck, they work fine for me......

Good luck...

Bob/NA4G

## 2091. R390A service needed

Newsgroup: rec.radio.amateur.boatanchors

I have a one-owner Ten-Tek Corsair 560 for sale. 10-160 meters. 100 watts continuous rated. Cosmetically 8 out of 10 (niccotine stains). Functionally 10 out of 10. Very clean radio (I've done the first Formula 409 job for you!). Comes with the power supply/speaker unit, all manuals, original receipt. This radio is going up for auction at our club's annual auction in a week, but I will sell here if I get a full offer. Asking $950. I'll ship to continental US for no additional charge.

Please e-mail offers to: gkitto@pobox.com or call (972) 383-7507 with SERIOUS OFFERS ONLY.

Thanks and 73,

Glen

For Sale, Heathkit DX-40 Transmitter with Heathkit VF-1 VFO. Surplus to my collection; acquired as part of a package deal. Both items sold to me as working, but have not been tested or used. DX-40 appears to be in good mechanical condition, but only fair cosmetic condition. There are no extra holes on the front panel, but there are two holes on top, and a couple of small holes on the back. Paint is scratched & flaked.

VF-1 is in good condition with no extra holes.

Manual reproductions included for both items.

$75 plus shipping for pair. (offers will be considered)
Jay Wicklund, KI7RH

I'd like to add my two cents worth. I have wondered how to properly attenuate the output of my TS-440 to feed a 4-1000 amplifier too, and that after redesigning the input stage of the linear with broadband coils to eliminate the input peaking control in the amp. I am familiar with lossy 3-db pads, splitters, etc., but was wondering if anyone had come up with a novel way to dissipate unneeded power from the exiter.

I look at my Techtronics 7633, a laboratory quality 200 MHz analog storage scope and ponder the fact it is so obsolete that the $5500 unit (when new) was obtained at a swap meet for $125. Well, there are many aspects to amateur radio and one cannot know all of it.

Having said that, I will also say that I was embarrassed after leaving the examination for the Extra class license. I am not an expert in radio, but the questions regarding complex impedance on the test were with one exception answered by mere inspection! (What is the real component of 4 -j3?) I don't recall any other math. The test is much easier than the technician class examination, and is probably easier (to memorize) than the general class test. Many questions are simply name recall for satellite terms or legal questions regarding volunteer examinations. Many hams I have talked to don't care to make the grade simply because it doesn't mean anything except to those who are collecting certificates. I took the test as a weak excuse to change my call sign because I found myself spending five minutes at the beginning

of every QSO straightening out mis-heard letters (call was WB6SDE, which was heard in any number of different variations, SDD CEE SED, SBE etc.) and also, I didn't want to bother checking whether I was in-band.

Is it elitist to feel embarrassed? I don't think so. I was over prepared to take the Extra test, and I felt rather stupid for overestimating the study effort.

Hi All ...
I'm new to Hallicrafters collecting and need some first time buyer's advice. I've been collecting "Plastic" AM radios (50's & 60's vintage) for some time now but I've always been intrigued by Hallicrafters Short Wave sets. I'm looking at a S-40B and a SX-62 right now and I'm not sure which to go with. Big difference in price! Is there a big difference in performance. Is one more collectible than the other and/or was there a big difference in quality at the time of manufacture. What is the manufacture dates of the two sets? Any and all advice will be appreciated. Hope this is not too many questions!
Thanks in advance,
David

# 2114. FT: 1940's or 50's Homebrew transmitting station

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-02-10 00:00:00 UTC
From: w5jv@juno.COM
Message-ID: <19980210.165525.11734.19.w5jv@juno.com>
Source record: 110333

For Trade: One lot of 50's era or earlier (possibly WW2 era) homebrew equipment: (4 pieces by one builder). Two transmitters, one keyer, and one variac power control source. I will have to describe as I have no digital camera to use for image capture.

(1) One xmtr is a 6 meter AM with 5763 driver and what looks like a 6146 (or taller) final up in the cage. Four tubes have shields. 11" deep, 9" high, 15" wide across the face. 3 xtal positions with VFO input jack on front. In the unit's center there is a power xmfr and a 10 hv choke immediately behind. On left side are two porcelin octal sockets fairly close together which might be for modulator tubes, dunno. So about 6 tubes and 2 empty octal sockets. There is a Collins audio isolation xmfr (or interstage xmfr?) ratio 1. to 1.0, 20Watts, gray with milspec label on top. Two meters on the face. A round black military type 0 - 10 ma in the top center, and a plastic square 0 - 150 ma to the right of it. Microphone jack mounted on front along with jacks, switches, etc. Black wrinkle WW2 type BUD enclosure with lift top. Tubes in place except for the two octals which might be rectifiers. Cabinet and parts at least visually look to be in great shape.

(2) The other xmtr appears to be an HF rig with built in VFO. As with the 6 meter AM rig, it is metered with switches & pots but nothing is labeled. The VFO dial is the National 30's-40's velvet vernier type with fine printed scale scrolling through small concentric windows; National Ni plated acorn nut in center. On top of this is an edge faced 0 - 10 ma meter. To the left of this, almost centered near top is a square 0 - 50 ma meter. Two switches in vert. row to left, four controls along bottom. Cabinet and parts look fine. The pwr xmfr leads were unsoldered for either testing, trouble shooting or whatever. My impression is that the old-timer who used these knew exactly what he was doing and the units appear to have been used very successfully. I.e., these are not bread-boarded pieces.. Again, WW2 BUD steel case, black wrinkle finish, lift top. 8" deep, 7" high, 14" wide across the face. 7 tube compliment with what looks like 6V6's in use as final and one other purpose. My guess is that it is a classic little cw rig. VFO tube and most tubes on shielded socket bases, some shields in place. All tubes there. Cabinet and parts visually are in fine shape.

(3) There is also a vacuum tube keyer and cpo. Built in black steel box similar in appearance to the old upright Ameco tube cpo's. Again, black wrinkle, BUD type enclosure, late 40's styling. 5" deep, 6" wide across face, 9" tall. Speaker opening is classic octal socket holes arranged in circular pattern with one in center. 6 tubes including what looks like an OA2. Small al. carry handle on top. The layout reminds me of the vacuum tube TO keyer from QST which was popular in the 60's.

(4) Variac power source. Black steel cabinet with Variac mounted nicely in the center. Nice round black meters, one on left and one on right. One reads 0 - 150V, the other reads 0 - 5 amperes. There is a pull out male cord on left front and a pull out female cord on right side. Both cords are on spring loaded "storing" type reels. Very nice touch. Nice professional job and fits well with station. 6" deep, 7" tall, 12" wide.

My instinct tells me that while the owner may well have made changes as he needed to, this station was built originally during WW2 and then used throughout the 50's. The equipment styling is definitely 40's. So, if you like de ja vue and have always wanted to get your hands on a little homebrew station of the period this would give you a lot of investigative hands-on enjoyment.

Contact me via private email if interested. Available as a lot only and I do not wish to separate. I am open to trade offers of equipment surplus to your needs or reasonable cash offers plus shipping. At the same time, I also would like to see these go to someone who will take care of them, so will work with anyone demonstrating good intentions.

73 and thanks for reading,,

Doug W5JV

Do you have a ALC control on the AMP and radio.
This would allow you to have a feedback loop to control level of
drive into the amp.

A 3db pad that handles 75watts or more.
This would reduce output by 1/2 power. Not easy to find!

Jack

I just recently aquired a Johnson Viking Ranger Transmitter. It appears from pictures I've looked at on the net that the crystal socket on the front of the unit has some kind of cover or "dummy knob" that goes over the socket when its not in use. My Ranger appears to be missing whatever it is that belongs there. Mine just has a gaping hole though the front panel that exposes the crystal socket. I apologize for my ignorance to those of you that are familiar with the Ranger but this is my first boatanchor transmitter aquisition and don't have any literature on the Ranger.

Can anyone enlighten me on what belongs over the crystal socket? Does anyone know of a source of parts (reproductions or otherwise) for the Ranger?
Any information on this unit is greatly appreciated!

Thanks,
Brian (KB8IIC)

## 2121. fs-SWAN 500 $75-

Newsgroup: rec.radio.amateur.boatanchors

Source record: 110357

I only have the schem for the s-38 (not C) and can't help, but it's easy enough to find. The rcvr is basically an AA5 design and there is no magic, except how/which trimmers to tweak to do the individual bands. IF is 455 and band alignment is via a standard RMA dummy just like a consumer set. Chassis is hot - watch for correct reassembly into the cabinet. Replace all the caps first. The thing will give a good account of itself, for what it is. All suffixes are similar, but the plain 38 had a BFO & tweaking is different.

Frank

# 2124. fs-KenPro RF speech Processor $50-

# 2132. HELP!, Power meter problems URGENT science fair help

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-02-10 00:00:00 UTC
From: John Lauber <jlauber@execpc.com>
Message-ID: <6boe5q$pkb@newsops.execpc.com>
Source record: 110366
Cross-posted to: aus.radio.amateur.wicen,git.radio.amateur,mcgill.amateur-radio,rec.radio.amateur.antenna,rec.radio.amateur.boatanchors,rec.radio.amateur.digital.misc,rec.radio.amateur.dx,rec.radio.amateur.equipment,rec.radio.amateur.homebrew,rec.radio.amateur.mi

I need urgent help to get me off on my science fair project.

I have been doing an experiment to test the resistance of different materials to an airborne signal, but I need serious help on the apparatus. First I tried a baby monitor and used an amplified microphone to pick up variances in the volume of the signal (audible), then measured the output of the microphone on a voltmeter. A very simple and indirect way of doing it. It worked, but it didn't seem to pick up enough change, and my preliminary testing resulted in less than desirable results. Second, I tried measuring the strength of a CB signal with a wattmeter, but the wattmeter had to be wired inline between the transmitter and antenna, not what I wanted to test. Is there any piece of equipment that measures the strength of an airborne signal? Am I setting this up right? (see diagram below)

```
------------------- | | --------------
| transmitter | | Block | | receiver |
------------------ (lead etc.) ---------------
```

Is there a wattmeter or other piece of equipment that will take the place of the receiver and give me a reading of the power of the signal, either precise or relative? I need some form of project by 2/17/98, and a good one by Feb. 23. I urgently need any help you can give me. Thankyou.

Please respond to jlauber@execpc.com .

Sincerely,

Dan Lauber

Sorry this text is translated with the computer

Hi,

I would build for my ship (steel sailboat) one SSB antenna . On the
eightstay I have not good experiences.
It gives in the ship accessory SSB antennae those are approx 4 to 6 m of 1,6
to 24 MHZ long the entire maritime mobile service field and for the entire
maritime mobile service field
Now my question:
Since these antennae cost approx 600 DM would like to build themselves.
Where I can find a manual?

Klaus

The AR88D is not the diversity model. It is the model with Medium Wave
BC band cover. The AR88LF is the model covering the LF maritime band,
lacks medium wave. The latter has an IF of 735 KHz whereas the former
is around 460 KHz ? (exact frequencyr escapes me at the moment).
By the way :
My AR88LF lacks it's 735 KHz crystal, has anybody a spare he/she is
willing to sell ?
Both my AR88's do not have an S-meter, although the wiring is in
place. It is my understanding that the S-meters were an option.

Use a field strength meter to measure the signal. I think Radio Shack still has an SWR meter that has a field strength position with a small antenna. You should also be aware that the experiment will be hard to control if you are just placing a piece of material in the signal path. Signals will bounce around the room, reflecting off walls and such, and find paths between the transmitter and receiver other than the direct one which you are trying to attenuate with the material. The best way may be to place the transmitter inside a box made of the material.

Good luck.

You can find some photos of a most unusual VHF transmitter
on-line in the newsgroup:
alt.binaries.pictures.radio

This week, we have a model TUO-1 transmitter picture!
It came from W5JI who provides the following description.

If your ISP does not provide the newsgroup:
alt.binaries.pictures.radio

ASK them to start carrying it! You will be glad. There are
a number of recent postings there with pictures of radios
that you will enjoy seeing!

Date sent: Mon, 9 Feb 1998 21:18:56 -0600 (CST)
To: baswaplist@foothill.net
From: Jim Coe W5JI <jcoe@brightok.net>
Subject: FS 1946 TUO-1 exciter

I have two exciter/transmitters surplus to my needs.
They are identical and are Type TUO-1 VHF by Air
Associates of Los Angeles circa 1946. They were
manufactured for the old Civil Aeronautics Administration
under contract CCA 25300 Order No. 47-2926

I call them exciter/transmitters because they were
meant to be exciters for high powered amps, but they
can actually be used as standalone transmitters if you
want.

They consist of an 807 xtal osc/tripler driving an
807 first doubler which then drives an 826 second
doubler followed by an 826 third doubler/output stage.
The units are 12"h x 13"d x 31" w and are all
aluminum construction. This unit was the exciter stage
for the TUO-1 transmitter which looks like a BC-610
on steriods.

The unit is designed for 108-118 Mhz but could easily be
modified for 144 mHz or even 50 mHz. I picked them up for
parts but they are so well made, I have not had the heart
to break them down. The time has come to use the parts or
sell the complete units to someone who will use them.

I have an original manual for the TUO-1 that I will
include (If the units are sold singly, one buyer will

get a copy.................)

The units are big, but not very heavy so I'm willing
to ship them, but a buyer within a 200 mile radius
of Davis, OK, may have the edge since I'm willing to
deliver them........I'd like $ 75.00 each or $135.00
for the pair plus shipping........I'm sure the list
members will let me know if I'm off base.

I'll answer questions by email...off the list...please!

Thanks es 73's.....
Jim Coe W5JI

## 2148. Baltimore Area -- FREE

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-02-10 00:00:00 UTC
From: Les Moskowitz <lmoskowi@mail.bcpl.lib.md.us>
Message-ID: <34E05D1A.3138A891@mail.bcpl.lib.md.us>
Source record: 110382

Before I throw it in the dump -- This is all free and was operational
the last time I checked:

Old Teletype gear -- Model 15 printer, Model 28 printer
(Paper) Tape equipment
Plenty of Paper and Tape
Terminal Unit

Test Equipment - Audio Generator, RF Generator, 6 foot racks

R390 Receiver

Old QST, CQ magazines -- approximately 1950-1970

The only requirement - You pick it up and take it away.

Les

# 2149. HOW TO REDUCE OUTPUT POWER

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-02-10 00:00:00 UTC
From: wb9gkz@aol.com
Message-ID: <19980210140101.JAA17566@ladder02.news.aol.com>
Source record: 110383

Hi fellas,

I've seen several postings by high-ranking amateurs on this Newsgroup regarding power reduction techniques for exciters connected to fussy amplifiers. Here, at the WB9GKZ Studios, I have several ways to reduce a transmitter's output power...thought I'd share them with you:

1) Install hose clamp around RG-8 cable. Squeeze tight...especially good at VHF.

2) In TS-520, remove BOTH 6146's...install jumper from plate pin of 12BY7 to final plate block cap. Then turn all knobs for max output.

3) Invite TVI-bombarded, irate neighbors over to show them your shack. They will help you "reduce" power by smashing your equipment with sledge hammers and pick-axes. Serving alcohol enhances participation.

4) Install 10-penny nails through your transmission line at 1/2 wavelength intervals. Good at all frequencies.

5) Ask your XYL what chores need to be accomplished around the house. Output power will be reduced for a long time.

These are just some of the techniques you could use to reduce that annoying high output power. These ways work well wether you're a highly-esteemed "Extra" or Novice.

73...Pat, WB9GKZ

# 2150. Want: Manual for Gonset Comm IV

Tuesday 02-10-98
Rocklin, CA 95677

Still looking for a manual for the Gonset
Communicator IV model 3341 2M rig.
This is the "flat" model, as opposed to the
upright "box" models...

A good and clean copy will do real
well also. All costs will be reimbursed.

Please check those file cabinets!

Thanks de John WB6GHA (formerly WN6GHA)

Planet Nik wrote:

> The origional enquiry was a marine band radio enquiry, is that not
> allowed in rec.boats.cruising?

Sure it is. We talk about SSB and radios often. What we object to is cross-posting, and this thread (now threads) is a good example of why. These "debates" stray from the subject of rbc and end up mixing us up in all kinds of things from other groups. Cross-posting is a violation of the charter. Very simple.

> You should have removed r.b.c from your
> cross post so that any responses (inc this) would have missed your
> newsgroup.

Maybe. I thought about it, but I decided to leave it on so others could pick up on the idea. It usually takes one or two messages for the group to get on top of something... But basically you are right, it should be removed to stop the cross-posting. BTW, my point was not meant to be unfriendly, just to try to keep the situation from escalating.

I laughed myself silly (yes, silly) reading Pat & Bill's "suggestions" for reducing power. Truly inspired humor is a rare thing, and should be nurtured and encouraged. 'Tis the difference, I suppose between SJ Perelman, PJ O'Rourke, et al versus Kant, Jung, Freud, and friends. Both have useful places in the order of things. To my easily amused ear it didn't sound like they were "ragging" on the fellow asking the question, but rather were having some fun with us.

Lighten up a bit. Recall the poor fellow from James Joyce's Ulysses who spent his entire life looking for the culprits who sent him a postcard with the prank statement "U.P. UP"?

PS: One suggestion, using cheap, lossy coax, might actually work at higher frequencies with 50 to 100 feet of the stuff!

From: dxguy@earthlink.NET
Message-ID: <34E1888C.126A@earthlink.net>
Source record: 110143

Arthur: Forget the R1051. It's a pretty bad RX. Only useful for net opn on fix-em & forget-em type operation. Tuning is by hard to turn knobs. No VFO, per se. Selectivity on AM is awful, non-selectible unless you pull it apart & modify. Hard to work on, the RF & syn decks are only servicable (properly) using the fixed-base test sets & manuals (not really available & huge). R390 is fine, friendly RX. R1051 is more stable. R390 has many more knobs to play with. I have dozens of R1051s in my garage awaiting a useful project for them. You an buy these @ Murphy's in San Diego by the truck load for about $50 each in quantity.

Enjoy don davis DXGUY@earthlink.net

Source record: 110237

I used the R-1051B's in the navy & overall they were nice receivers for what they were intended for. Basically you would set them to one frequency & leave them alone. On several occasions I was required to make rapid frequency excursions from one end of the spectrum to the other. This is where I disliked them. I literally got blisters on my fingers from turning the frequency knobs. They were sensitive & stable but give me a spinner knob to dial up a frequency instead of five different knobs.
As for the R-390A my experience is practically nil.
Hope some others can shed some more light for you. Good luck!
Roman, N2CDD

Hello Will,

The first mention of the term "Elmer" that I can recall was by W9BRD, Rod Newkirk, in the "How's DX" column in QST. This was in the early to mid '70s, if I'm not mistaken - I will try to find the exact issue. I believe he either invented the term, or was the first to use it in print.

Rod's DX columns are great reading, even if you have no interest in DX at all. My personal favorites were the stories about Grommethead Schultz and his unusual ideas that never quite worked out as planned. Those stories got me to like anchovy pizzas, too. The immortal lyric poetry at the annual DXHPDS (DX Hoggery and Poetry Depreciation Society) always gives me a laugh, and his columns on such a wide range of ham radio subjects - from homebrewing to the antics of the shack cat (Madame Mu) are still good reading. If you have access to QST from the late '40s to the early '80s, take a look.

The reason for the differance in price is this. the S-40B is a single conversion radio, the SX-62 is a double, also the SX-62 covers the FM broadcast band, the s-40b does not. Lots of other reason, the bottom line is the s-40b is a cheep radio. the SX-62 is a serious radio.

s-40b was made from 1950 to 55

sx-62 made from 1949 to 1953

Greetings Christoph !

I sincerely appreciate your learned comments. I am surprised at
myself that I didn't go to the trouble of looking up the word for
"backstay". I certainly would have recognized the problem had I done
so.

Interesting comment on the experiment. I tried that once with a
letter that I had written. I plugged into an english to spanish
translation program and then fed the result back through its spanish
to english counterpart. I was absolutely amazed at how well it did,
The one thing that got screwed up was some reference that I had made
to a golf ball. Otherwise it was almost perfect.

I hope the gentleman with the boat can avoid the DM 600 antenna - I
doubt if was any good anyway - Hi.

Hallo,

STA-LOK makes stainless (rostfrei stahl) rigging insulators for standard 1 x 19 wire (also possible for 7 x 7 or 7 x 19, but not with galvanized wire or wire with fiber core). Material = 316L. For wire sizes 1/4" to 3/8". Prices are USD 189 to 291. You can order online from http//www.westmarine.com or local yacht chandler.

Gruessen/DF,
Frank

# 2187. Re: Q: Mech Filter Byapss

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-02-11 00:00:00 UTC
From: Michael Black <blackm00@CAM.ORG>
Message-ID: <Pine.GSO.3.94.980211144215.14395A-100000@Stratus.CAM.ORG>
Source record: 110264

The problem with just bypassing a mechanical filter is that while it will give you a wider passband, it will also give you lousy skirt selectivity.

A mechanical filter gives you a nice sharp curve, meaning if something is right next door in frequency, it has to be very strong to be readable in your passband.

IF transformers are not sharp. So a signal, out of the supposed passband, can still come through as long as it's strong enough.

If a receiver has enough IF transformers, and all properly aligned, it will give better skirt selectivity, but considering that the 51J-4 is meant for use with mechanical filters, I'm not sure that a lot of conssideration was given to using the IF transformers as anything but simple couplers between stages.

So if you simply bypassed a mechanical filter, it is bound to give a wider selectivity (the actual bandwidth dependent on those IF transformers). But while it would be great in an empty band, it won't be too useful in a crowded band because adjacent singals will likely interfere.

You might want to find a copy of CQ for January 1964, or find someone who can supply a copy. There's an article "A Wideband Filter for the 75A-4" by Wallace T. Thompson on page 50.

He built a module consisting of three IF transformers loosely coupled to plug in where a mechanical filter would go, which provides wider selectivity with better skirt selectivity. He mentions a few specific details to doing this to the A4, such as having to deal with resonating capacitors across the socket for the mechanical filters.

Of course, it's not completely compatible, since the A4 has a 455KHz IF, and the J4 hsd s 500 KHz IF, if I remember correctly.

The idea of cascading IF transformers was also used by Fred Brown in an early 1970 issue of CQ, where he reworked an HRO. Doug DeMaw also discusses the idea in his "W1FB's Design Notebook" (available from the ARRL) on page 118.

If the J4 had a 455KHz IF, it might be worth trying to fit a ceramic filter from an AM radio into the mechanical filter socket. Surely it has better skirt selectivity than a simple IF transformer.

## 2189. Looking for a BIG Raytheon tube for display

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-02-11 00:00:00 UTC
From: k5dh@rtis.ray.com
Message-ID: <6bt3fp$pnb@sf18.dseg.ti.com>
Source record: 110266

I'm looking for a Raytheon tube for display. The bigger, the better (within reason, of course, as it has to sit on my desktop). I'd prefer a "dud" (to keep the cost down), but cosmetically it has to be WAY nice with all markings intact and readable. I'd like to have some kind of big transmitting tube, just for the visual impact. Whatcha got that I can get cheap or free?

Dean, K5DH

Don't know what the D stood for, I've looked in the manual that I have
and it gives no indication. The manual is for an LF but I have a D :-).
I have also checked photocopies of bits of a D manual that I have.

The LF also has a diversity connector in the AGC circuit and is infact
pretty identical to the D apart from band 1 which is for the lower
frequencies of 73 to 205 kCs.

>Perhaps there is someone out there that can explain all the

>(YACHHH!). Does any one know why the RAF made these mods?
>
Cos they were butchers, practical but butchers.

>Does any one have an S meter modification for the 88D, which
>does not involve hacking the original components?

A proper D would have the mods already installed. It's a pretty poor S
meter as it is dependant on the setting of the RF gain. But there should
be two wires linked together which can be connected to a suitable meter.
I quote:
"The necessary wires for connecting a tuning meter in the
cathode of the first IF tube have been included in the cable wiring. If
and when tuning meters become available, it will be a simple matter
(Grin) A 5 mA meter with 0 deflection to the right is required".

The origional enquiry was a marine band radio enquiry, is that not
allowed in rec.boats.cruising? You should have removed r.b.c from your
cross post so that any responses (inc this) would have missed your
newsgroup.

>>I know I simply decrease the mic gain or carrier level to reduce the power
>>but I want to limit the output power more definitely.
>
>

Lowering the mic control is the LEAST desirable method, since it
ratio of the carrier leakage to the full PEP output.

Removing one tube might work, but it would likely also involve requiring
a realignment of the preselector since the total grid capacitance
is part of the resonant circuit. (The transmitter may not "peak"
at the same point as the receiver does, and the transmitter tuning
may no longer track properly. This will be worse at higher frequencies.)
The neutralization might also be
affected and require readjustment. Another caveat -- are tube
filaments run in series to permit 12 volt mobile operation? If your
willing to try it with one tube, be prepared to do a complete realignment
of the preselector and neutralization. Also, remember the quiescent
idling plate current will be 1/2 of what two tubes would draw..
Even with reduced drive power, make sure the Kenwood and your
amps ALC are interfacing properly..

[-deleted-]

I took the Extra in 1968 after the ARRL and FCC started their dumbass incentive licensing and took my favorite DX spot on 40 CW.

I walked out of the FCC Customhouse in San Francisco thoroughly pissed off. The exam was technically easy but I felt like I should have brought along a Philadelphia Corporation Lawyer to interpret/decode the questions with their double negatives, tricky wording and misleading multiple choice answers. I remarked to one of the other examinees that it was evident the final exam text was written by a psychologist or lawyer and not a technician.

The FCC examiner really set the mood for the group at the beginning of the 20WPM code test - remind you that this was in the days when you had to copy 100 characters perfectly within 60 seconds. The said he didn't know why we showed up at all; half of us were going to fail the code test and the other half the theory.

I passed. A lot of the other dismayed/disappointed examinees didn't. I'm just glad I had some rudimentary brainwashing training in the military.

Sorry to drift off the thread. Back to 400 pound BC-610s.

Message-ID: <34e2579a.1104595@news.fast.net>
Source record: 110157

Have the following for sale:

Ranger II transmitter. Looks decent. Was working when it was purchased from a local ham about a year ago. Have manual. $250.00

National HRO-60 receiver. Looks good. Was working when purchased from a local ham about 2 years ago. Have manual copy and coils A, B, AC, and D. $250.00

Heath Mohawk receiver. Front panel good. Cabinet was repainted with fairly close match of original paint. Again, this unit was working when purchased from a local ham about a year ago. Dial drum has some cracks, but it's not too bad. No manual. $100.00

All of the above items came from a friend of mine who needed the room. Now, with 2 small kids running around who need spring and summer clothes for school, it's time for me to say goodbye to these items.

No shipping on these, but I am willing to meet half way (up to 100 miles) for delivery. I'm near Allentown, Pa.

Please e-mail if interested. Thanks!

John Schell N3AB

hmmm... humor... well I dunno... Benny Hill I could take... but Mr. Bean.. well... I think it's a conspiracy.. at first just a glimpse here and there (mostly on PBS).. but now a major motion picture.. released into the USA! An obvious evil attemp to warp the minds of our children...

I say it's time to retaliate in the "humor war" let's send over re-runs of Gilligans Island and Gomer Pyle USMC to Europe!!!!

# 2240. Added pilot lights to sub-mini tube radio (series heater string)

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-02-12 00:00:00 UTC
From: wa2ise@netcom.com
Message-ID: <wa2iseEo96ro.Hx7@netcom.com>
Source record: 110172
Cross-posted to: rec.antiques.radio+phono,rec.radio.amateur.boatanchors

I realize this isn't going to set the world wide web on fire, but....

I built some time ago an AM radio using sub-miniature tubes in place of the the 7 pin miniatures. And wired the heaters in a parallel and series circuit and in series with an AC rated capacitor to drop the powerline voltage down to the series voltage needed. Things run on 450ma, and two of the tubes use all of that, and another pair of tubes, wired in parallel, also consume 450ma heater current. Another pair only consume 400ma, and to make up the missing 50ma I previously used a 120 ohm resistor. Found some 6V at 25ma light bulbs at Radio Shack, so I dicided I wanted pilot lights, so the two bulbs in parallel with each other nad the 400ma tubes make 450ma. And the capacitor and parallel tube heaters limit the turn-on warm-up voltage and current so the bulbs don't burn out.

See: http://www.netcom.com/~wa2ise/radios/AA5submini.html

Greg: I'm using a hamfest acquired 3PDT 110 V relay. One pole
switches the antenna. You could use one to mute the receiver. My
RX is an HQ-100 - I use one of the poles to switch out the speaker!

The Benny Hill show in the US was the variety like UK version editted to
a "Laugh In" pace. The two show versions were quite different. FOr
those in the UK, it turned Benny Hill into Kenny Everett.

From: Olav tveiten <olavtvei@online.no>
Message-ID: <34E2EBA5.B220D723@online.no>
Source record: 110177

What is the main difference between these receivers? The SX25 is post
war while the
SX 28 is pre war, is that right?
Does the SX28 handle SSB?
If to choose between the two, is the youngest one better? I kinda like
the exterior of the SX 28 better then the SX 25.
Any tips and hint?
Yours Olav Tveiten

The following is a repost:

The following COLLINS equipment is for sale. Equipment has been securely stored for the past several years and was operational when stored. All equipment is sold with a 7 day refund policy, less 2-way packing, shipping and insurance charges. Send email requests for JPEG scanned image of all 4 pieces.

Offers in US dollars will be received on these lots until 12:00 noon CST on Sunday, February 15, 1998. All equipment subject to prior sale. Highest or any offer may not be accepted.

Buyer is responsible for pre-payment by money order or bank draft in US dollars of purchase price plus packing, shipping and insurance. Equipment is located in Western Canada, approximately 300 miles North of the Montana/North Dakota/Canada-US border. Shipment by UPS or TBA.

PLEASE PHONE OR EMAIL FOR ADDITIONAL INFORMATION.

Lot #1: KWM-2 Winged
Serial Number: 12535
Spinner Knob
No scratches on panels
No rub marks on panels
Includes Collins manual
Includes 516F-2 AC power supply

Lot #2: 75S3-C Meatball Complete with Collins CW Mechanical Filter for 75S Receivers (Filter: F455PA FA05 6735 (526 9494 00)
Serial Number: 13572
Spinner Knob
No scratches on panels
Minor rub marks on front panel
New original equipment dial front has been installed (old one also supplied)
Two screws on dial front may not be original
No extra crystals installed
Recently gone over by technician
S-meter appears erratic in operation
Includes Collins Manual

Lot #3: KWM-1 Winged
Serial Number: 791
Rub marks on knobs
Includes 516F-1 AC power supply (Missing 4 side panel retaining screws for

PS case and one small extra hole (1/4") has been drilled in the top of PS case)
Includes tubular lo-pass filter mounted on back of KWM-1
Includes Xerox copy of manual

Lot #4: KWM-2 Winged
Serial Number: 331
Non-Spinner Knob
No scratches on panels
No rub marks on panels
Zero set does not work (dial cord slipped off)
Includes Collins manual
Includes 516F-2 AC power supply

Even none English speaking Europeans find Benny Hill funny, is it too subtle for the US or something?

Why was Mr. Bean such a big succes in the USA? It's quite similar, it would have been better with Hill's Angels ;-)

Source record: 110185

The SX-28, imho, is the epitome of the Hallicrafter
receivers. The SX-32 closely resembles the styling
of the SX-28, but lacks a few of the features.
I am restoring a SX-28 at present, and it is a very
nice vintage receiver. I am not familiar with the
the SX-25 set.

>What is the main difference between these receivers? The SX25 is post
>war while the
>SX 28 is pre war, is that right?

Both are prewar - -25 came in 1940 & the -28 in '41. Some (not all)
differences: 28 was almost twice the price, had coverage divided into 6 bands
vs 4, had superior audio and generally a higher-end rcvr of its day that is
sought after today by all of us. The SX-28 weighs about 75 lbs - the SX-25 has
a lot less in it and feel like about 35 lbs to me. The -25 typically trades
for $100 or less at the moment (I have one). Either will need a product
detector mod to perform well on SSB; several effective & simple mods were
published at various times in CQ & QST older issues. Otherwise, to many of us,
the SX-28/SX28A is sort of a vintage "Cadillac" and the SX-25 a "Chevrolet", if
you know American autos a bit. Nicknames were "Super Defiant" (SX-25) and
"Skyrider" (SX-28).

Push-pull audio (2 x 6V6) on the SX-62 as well, I think.

As Frank noted, they are both prewar. The replacement
for the SX-28 came out after WWII and was their SX-42
model. Another rather large and heavy boatanchor with
a more modern styling. The SX-42 covered up to 108
Mc (FM only). Both the SX-28 and SX-42 used dual
RF stages. The SX-42 is more commonly available
than the SX-28. I have both, and wouldn't part with
either.
You might want to scout a copy of Chuck Dachis's book
on Hallicrafter radios.

Interesting,

I wonder if some of the "surplus techs" removed them off and threw 'em away before putting the R388's on the selling block. I've seen numerous R388's w/o tags.

You could always go to a trophy/awards store and get a nameplate engraved for a couple of bucks.

Looking for one myself..

A Dow-Key relay is the way to go. However, if you want to be all
electronic, then get a B&W electronic TR switch. It uses a tube, 6AH6 I
think, to let you have QSK. You should use a low-pass filter between
the switch and the antenna 'cause they can cause severe harmonics.

Source record: 110195

Greg, many of the TR switches of that era were merely wafer rotary switches mounted in a fancy box with connectors. You could make your own unless you want a nastalgia switch. The response suggesting the use of a relay to switch antennas, mute the receciver etc. is a good one. A Dow-Key relay seems more rigerous, but in fact they can give trouble because of poor contact wiping. Another thought is to try and find one of the small T/R relays from an old commerial two-way radio. But you won't loose anything at HF frequencies from the use of a regular relay.

Interesting info. I bought my SX28-A in 1958 for $125, a very
princely sum for a teenage SWL.

After I got my ticket I was able to get very good SSB coverage with a
little finessing of the BFO control.

Shamefully, I allowed the receiver to sit around for many years in my
shop until I finally boxed it up. Apparantly I also made a huge
mistake in disposing of speaker, which I am not sure was the original.

At any rate, I have visions of getting it restored one day.

I've added TNT and Thordarson transmitter write-ups to Radio Bay at

http://www.io.com/~nielw/index.htm

The TNT transmitter uses two '10s or '45s in push-pull. It is a copy of one featured in the Nov 1930 issue of QST. Most recently I used it in the last AWA '29 CW contest.

The Thordarson transmitter is one that Vance, K5CF, restored. If you work him in the AWA OT CW contest, this is the one he's using (along with a NC-200).

I have original Hammarlund Radio advertising flyers for models
HQ100, HQ110, HQ145, HQ160, HQ170, HQ180, SP600-JX and HX50.
All except the HX50 are four pages. The HX50 flyer is two pages.
All are in good condition but are punched for a 3-ring binder.

I would like to trade these for similar material on National Radio
equipment.

tnx, Niel-WA5VLZ, Rochester, MN

Source record: 110221

I think Ham Radio has place for many aspects, being here for more than 44 years, for me it means phone, valves, and specially the technical aspects of Ham radio, I have many goods friends who only use High speed CW, DXing, others only digital computer asisted comunications, and so on. Some are technical oriented and operate very little, some operate a lot rigs they dont understand at all, like most of us operate our cars.

I guess I can service and fully understand any boatanchor, but I would be rather lost trying to service one of the new transmiters.

But I think in this newsgroup, the questions should be about boatanchors, and I dont include in this group of rigs some 12KW russian submarine L.A. weighting 1000 pounds (smile)

General questions maybe should be sent to another group, but in any case we should never lose our kindness, no matter how old angry complaining hams we have become.

Good Morning, Andre,

If I correctly understand the prefix "back" in a nautical context, it
would mean "forecastle" or "foc'sle" as we say. If that's the case
then wouldn't the german word Backstag translate to Forestay?
Continuing with that thought, then it's no wonder that languages can
become so confusing. Anyway, makes a nice conversation item.

I worked on a HRO 500 6 months ago. They were a good example of early solid state receivers , but Hammurlund, Hallicrafters, Collins and Drake all offered good rigs of that vintage too which were all solid state. I personally found the operation clunky and not of the best audio. If you want a receiver with that desired quality I'd consider a rx with a broader range of selectivity an dbetter audio output. (I would prefer a Collins 51JX over the HRO 500!)
On cw the HRO was a weak performer. On SSB it was fair.

Good luck on the quest es 73 steve

But you *don't* understand it and you have it arse-backwards, not to mention the idea of the fellow flying his genoa off his radio antenna. This is not a "nice conversational item" here; it is an off-topic, ignorant thread that is mucking up this NG contrary to its charter, is *still* getting rudely and ignorantly cross-posted to other NG's despite previously-posted notice of same by others, and hogging USENET server space worldwide, causing more informative posts in this and other subjects, to expire. No wonder unmoderated USENET is becoming such a wasteland, and so many of the Europeans & English think the yanks are simpletons - they have good reason!

Frank

This is a message from Al Blake. If you can help Please e-mail him at ablake@usit.net

My name is Andrew Blake (423-690-8980) and I need a paper tape duped for an old HELL drum scanner (made in Germany) that is connected to a very old computer for the graphics download. Believe it or not, this stuff still works! The tape we have is quite stiff at this point and has been repaired in at least two locations. In one of these locations that patch has slightly elongated a row. I think there is about 30 ft of tape in a 3/5 hole configuration (8 total) approximately 3/4 inch thick.

Can you help? Are materials available to create a Mylar tape? What can we do to reimburse your efforts?

Thanks for your reply!

Andrew Al Blake

Heathkit IP-2760 Unassembled NEW in the box. Heath called it a "Battery Eliminator". According to the Specifications the output voltage is variable from 7.5 to 15 VDC, Output current is 20 amps intermittent and 12 amps continuous, Output Ripple is less than 1% at full load, Output Regulation is Less than 2% variation from no load to full load. It measures 5-1/4" high x 11" wide x 11" deep and weight is 22.5 pounds. It is still packed in its original box and is complete with Manual. Looks like a really neat kit!

Check it out at:

> call the german Backstag ?
>
Hmm. From an illustration in a german-language book, I derive that the
`Achterstag' is a single stay that runs down from the top of the mast to
the stern along the centerline of the boat. `Backstagen', of which there
are two, run down sideways, aft of the shrouds, but still forward enough to
be in the way of the boom. Therefore they are kept slack on the leeward
side and need to be adjusted each time you change tack. I guess they're
not very common any more (probably because modern rigs leave room for a
fixed backstay).

As I said, this is just what I'm gleaning from a little figure and may
not be accurate in general. Also, I don't recall the english term for
`Backstag' (`running backstay', perhaps?)

Hello everybody,

I have Navy RBO-2 made by the E. H. Scott company. I need the front
bezal and the freqency pointer to finish this very fine radio.
I dont know how it was missing as it has everything else, but who knows.

Please email me if you have this part or know where I can find it.

Thanks in advance,
Keith

Hi Charlie OM,

I consider my HRO-500 to be a jewel. It is an
excellent example of the transitional era between
tube and transistorized receiver designs. It was
intended as a surveillance receiver almost certainly,
and, together with its complex construction with lots
of metal castings, was very expensive. I use it
as a general-coverage receiver, as well as on the
air (mostly on CW).

I am a Ham Radio Operator - over 30 years. I'm also a boater.

Why on earth are you people posting to all these different news
groups? Just because you can?

How about a little consideration, please...

Not everyone (maybe not anyone) on rec.boats.cruising cares about
humor in the UK, especially as interpreted by Hams...

Thanks guys,

Uhmmm, there was a kit that allowed all 51J's to
have the mechanical filters. As a matter of fact, a 51J4 is
just a 51J3 with the kit installed by the factory. If you look
at the chassis on your 51J4, you will notice that the holes
for the "missing" 51J3 IF transformer are punched labeled and
covered by the filter kit module.

Talk about your basic boatanchors, these are HUGE. WWII,actually
pre-war Navy shipboard stuff, about two feet square and 80# plus each.
The pair give continious coverage from 100kc--25mc.
Two receivers, one shared power supply and armored cable to
connect the receivers to the PS. about 220 lbs of radio!
WILL NOT SHIP, pickup in Roanoke,VA.
$325 or interesting early radio trade. ANY INTEREST OUT THERE??

## 2325. Hallicrafters SX-42 bandswitch-aid

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-02-13 00:00:00 UTC
From: Phil Nelson <nospam.philn@accessone.com>
Message-ID: <6c2nlc$bqf$1@usenet49.supernews.com>
Source record: 110122

I have a Hallicrafters SX-42 with a badly burned bandswitch.
Something evil in the past caused enough arcing to burn
off some contacts. As a result, only the AM (BC) band
works now, although after some minor work it sounds
*great* on that band.

If you've ever seen the bandswitch on this radio, you know
it's a beast. Something like 11 gangs, with a zillion components
and connecting wires stuffed everywhere. Removing it means
rebuilding that whole end of the radio, basically.

If by some miracle you have a working bandswitch, I'd love
to buy it. Or, if you have successfully repaired one of these
switches and have any sage advice to offer (other than
infinite patience), I'd love to hear that, too.

This seems like a super receiver, but I'd like to get the
other bands working, to help convince my loving wife that
it's something more than the world's most expen$ive
nightlight.

Cheers.

For sale:

Johnson Messenger 5 channel tube type CB. Receives ok.
Have not tried transmit, but TR relay kicks in - seems ok.
Has original mike and mike clip on side of radio.
Cabinet original - has a few small added holes in
side and a few paint chips.

Face is excellent. Also has the original FCC registration
card affixed to the side with the original owner's
name, call letters, and expiration.

Underside is VERY clean. Top of chassis has surface
dust/dirt - easy cleanup.

Have jpegs available on request.

$85 plus shipping.

Thanks,

Dave dx40@juno.com

How NOT to Fix Your
Radio Tower
(from the Darwin Awards list of Nominees)

Although this contestant did not kill himself (this time), we expect to be amused with the
details of his demise in the near future. This man was in an accident and was therefore
required to fill out an insurance claim form. The insurance company contacted him and
asked for additional information. This was his response: "I am writing in response to
your request for additional info for Block 3 of the accident reporting form. I put 'poor
planning' as the cause of my accident. You said in your letter that I should explain more
fully and I trust the following details are sufficient.

"I'm an amateur radio operator and on the day of the accident, I was working alone on
the top section of my new 80 foot tower. When I had completed my work, I

discovered that I had, over the course of many trips up the tower, brought up some
300 pounds of tools and spare hardware. Rather than carry the now un-needed tools
and materials down by hand, I decided to lower the items down in a small barrel by
using a pulley, which was fortunately attached to the gin pole at the top of the tower.
Securing the rope at ground level, I went to the top of the tower and loaded the tools
and materials into the barrel. Then I went back down and untied the rope, holding it
tightly to ensure a slow descent of the barrel. You will note in Block number 11 of the
accident reporting form that I weigh only 150 pounds. Due to my surprise of being
jerked off the ground so suddenly, I lost my presence of mind and forgot to let go of the
rope. Needless to say, I proceeded at a rather rapid rate of speed up the side of the
tower. In the vicinity of the 40 foot level, I met the barrel coming down. This explains
my fractured skull and broken collarbone. Slowed only slightly, I

continued my rapid
ascent, not stopping until the fingers of my right hand were two
knuckles deep into the
pulley.

Fortunately, by this time, I had regained my presence of mind and was
able to hold
onto the rope in spite of my pain. At approximately the same time,
however, the barrel
of tools hit the ground and the bottom fell out of the barrel. Devoid of
the weight of
tools, the barrel now weighed approximately 20 pounds. I refer you again
to my weight
in Block number 11. As you might imagine, I began a rapid descent down
the side of
the tower. In the vicinity of the 40 foot level, I met the barrel coming
up. This accounts
for the two fractured ankles, and the lacerations on my legs and lower
body. The
encounter with the barrel slowed me down enough to lessen my injuries
when I fell onto
the pile of tools and, fortunately, only three vertebrae were cracked.
I'm sorry to report
however, that as I lay there on the tools, in pain, unable to stand, and
watching the
empty barrel 80 feet above, I again lost my presence of mind. I let go
of the rope
and..."

The big problem with the HRO 500 was poor dynamic range. At that point in history, it was not generally understood how to make a solid state receiver with good dynamic range. That's why Drake took so long before comming out with a fully solid state design.

73,
Bob AD3K

Parts and Parts Rigs needed:

Good plate tuning knob for Heathkit AT-1.
AF gain knob for Heathkit 301/401.
Hallicrafters SX-99 with good meter.
Swan 120, 140, 175 or 240 with good meter.
Restorable Heath HP-23 power supply.
Siltronix 1011C with good power transformer.
Drake R-4 series receiver with good, unstained tuning dial scales.
RCA AVA-126 power supply with good transformer and/or relays.
Thumbscrew from speed weight for a J-36 bug key.

Any "ARC-5" coils, transformers, boxes or case parts
marked for above 9 MC (except 15 MC),
or for 4200 KCs,
or marked "RAV" or "RAT".

Looking for control boxes built by Aircraft Radio Corporation of any color.

Would like to hear about anything you may have by Aircraft Radio Corp.
(However, I am not seeking R-10, R-11, R-13, R-15, R-19, T-11, T-13 or TV-10).

Anything at all for radio set RAX.

Also need three 4-pin sockets from 1926 or earlier which
will mount DeForest 4-pin Audions such as the DV-2.

Jim:
This unit powers the following:
SCR-543* Transmitter-Receiver, Hallicrafters, (BC-669); TM 11-625,
1944.
Ground, transportable and Vehicular, transportable
command set for
use in vehicle or as field station. AM; freq range
1.68-4.45 mc;
voice only; transmission range 20 miles stationary, 15
miles moving.
Xmtr rated output 45 w/xtal control; 6 pre-set channels.
Power
supplied by Power Unit PE-108 (including 12 v storage
batt) and Power
Supply Unit PE-110; POWER REQUIREMENTS, REC 220 W, 115 V,
60 CYC OR
5.5 AMP AT 12 V dc: TRANSMITTING 550 W AT 115 V, 60 CYC
AT 85% PF.
Rec may be operated from storage batt when engine gen is
not
operating. Xmtr and power unit may be controlled from a
distance of
18 ft w/Remore Control Unit RM-21, supplied. Uses 15 ft
whip ant and
a 7 ft radial counterpoise added for non-vehicular
use.

I'd be glad to give it a good home, rather then see it stripped.

Complain if you wish, but the fact that you upgraded meant IL worked.
But of course, IL goes back much earlier than the 60s. In 1923, a new
grade was created, the Extra First Class. It gave the holder privileges
to 200 to 220m (being able to operate above 200m was quite a bit of
incentive to upgrade to this new ticket). To obtain the Extra, one had to
have been licensed two years, take a test similar to the commercial first
class of the day, copy 20wpm, and have a clean record.

Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.swap,rec.radio.amateur.misc,uk.radio.amateur

You can find some photos of a most unusual VHF transmitter
on-line in the newsgroup:
alt.binaries.pictures.radio

This week, we have a model TUO-1 transmitter picture!
It came from W5JI who provides the following description.

If your ISP does not provide the newsgroup:
alt.binaries.pictures.radio

ASK them to start carrying it! You will be glad. There are
a number of recent postings there with pictures of radios
that you will enjoy seeing!

Date sent: Mon, 9 Feb 1998 21:18:56 -0600 (CST)
To: baswaplist@foothill.net
From: Jim Coe W5JI <jcoe@brightok.net>
Subject: FS 1946 TUO-1 exciter

I have two exciter/transmitters surplus to my needs.
They are identical and are Type TUO-1 VHF by Air
Associates of Los Angeles circa 1946. They were
manufactured for the old Civil Aeronautics Administration
under contract CCA 25300 Order No. 47-2926

I call them exciter/transmitters because they were
meant to be exciters for high powered amps, but they
can actually be used as standalone transmitters if you
want.

They consist of an 807 xtal osc/tripler driving an
807 first doubler which then drives an 826 second
doubler followed by an 826 third doubler/output stage.
The units are 12"h x 13"d x 31" w and are all
aluminum construction. This unit was the exciter stage
for the TUO-1 transmitter which looks like a BC-610
on steriods.

The unit is designed for 108-118 Mhz but could easily be
modified for 144 mHz or even 50 mHz. I picked them up for
parts but they are so well made, I have not had the heart
to break them down. The time has come to use the parts or
sell the complete units to someone who will use them.

I have an original manual for the TUO-1 that I will
include (If the units are sold singly, one buyer will

get a copy.................)

The units are big, but not very heavy so I'm willing
to ship them, but a buyer within a 200 mile radius
of Davis, OK, may have the edge since I'm willing to
deliver them........I'd like $ 75.00 each or $135.00
for the pair plus shipping........I'm sure the list
members will let me know if I'm off base.

I'll answer questions by email...off the list...please!

Thanks es 73's.....

## 2370. Stewart-Warner help...

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-02-14 00:00:00 UTC
From: caschwark@aol.com
Message-ID: <19980214234400.SAA00801@ladder02.news.aol.com>
Source record: 110006

I came across a pair of Stewart-Warner Model 73 Citizen's Radios. These are UHF models from the early 50's I think. Anyone date them more accurately??

They operate at 465 megacycles (mHz), have a detachable/collapseable "tee" dipole antenna, run off an A/B/C battery pack. There is a tuning dial that lets the operator "slide" the tuning a bit up or down to compensate for differences in maufacturing and alignment, I believe. They use a peanut tube as a super-regen detector/oscillator and a 3V4 for audio. Look like dark maroon walkie-talkies.

Would like to find exact date on these. Any help or technical info appreciated.

Hi Walt pretty broad question -- history of, models # ???

Some of the Manual Vendors on the web carry manuals for Dumont such as:
Dumont 274 Oscilloscope
Dumont 303 Oscilloscope
Dumont 304 Oscilloscope

*** E-Mailing List *** UK-Vintage-Radio

The mailing list UK-Vintage-Radio is designed to promote the
interchange of information between collectors of (mainly) British
broadcast and communications radio sets.
It is meant to complement, rather than compete, with other
lists/Newsgroups of a similar nature.

Topics for discussion:-

* Collecting, refurbishing, storing.
* Sources of materials and components.
* Technical queries and discussions.
* Wanted & For-Sale.
* News of forthcoming events.
* Service information.
* Books and Publications.
* Societies, Museums info.
* W.H.Y.

TO SUBSCRIBE to the mailing list,

Email: uk-vintage-radio-request@webaware.co.uk

include 'subscribe' in the main body of text.

It is hoped that this facility will be of use to those who collect and

refurbish old radio sets, be they broadcast, ham, or military.

The list will be as strong as its contributors, so please feel free to

subscribe. It is hoped that it will provide a vehicle for sourcing
service information, manuals, and spares, also a good place for
technical discussion, hints and tips, buying and selling, etc.
Best of all, it's FREE!

>If I correctly understand the prefix "back" in a nautical context, it
>would mean "forecastle" or "foc'sle" as we say. If that's the case

The foc'sle is a storage or berthing area towards the bow of the
ship. It's the worst possible area to live, for the motion is
quite violent. Read Dana's "Two Years Before The Mast" to get
a better idea of shipboard living conditions (in that region
of the vessel).

Source record: 110043

There is little or no relationship between what most people ask or demand as payment for something they are offering for sale and "value". Many people will measure "value" in terms of "$". I choose to value something in terms of "utility" which is even more difficult to quantify. "$" is nothing but a medium of exchange that, at the best, is only distantly related to value.
Most people will ask for as much as they can "get by with" when they are selling. That is their right to do so.
However, if they advertise the asking price to the public, then I have a similar right to discuss and disagree with the asking price should I choose to do so. I rarely do. That right isn't based on what anyone else thinks something is worth other than myself. It is also not related to how much money I may have available to spend.
The bottom line, and the only one that counts, is what "utility" a potential purchase has for me. I will translate that utility into what I think is a fair "montary" exchange. That amount has nothing to do with what someone else thinks something should sell for other than the seller. If someone else wants to pay more than I do - that is their business also.
Have a nice day!

Howard Weeks

So you want to re-live those old days when teleprinters were mechanical and every character that went out what typed by somebody on a real keyboard? Join us on Feb 20 for Green Key Night (& Day) to commemorate the opening of the HF bands to FSK RTTY, and to remember the pioneers. It's not a contest, no logs to send in, no scores to keep, and no rules. Just use a mechanical teleprinter if you can, use 850 shift now and then if you can, use vacuum tube gear if you can, but in any case get on the air and have fun and wallow in nostalgia. (I confess I'll be using a computer this year, as my old-gear station is all apart.)

Some people ask what frequency - well just anywhere that RTTYers hang out. Maybe 3620, 7090, 14090, 21090?

What do you call this, posted to this thread two days ago:

**********
********
Hallo,

STA-LOK makes stainless (rostfrei stahl) rigging insulators for standard 1 x 19
wire (also possible for 7 x 7 or 7 x 19, but not with galvanized wire or wire
with fiber core). Material = 316L. For wire sizes 1/4" to 3/8". Prices are
USD 189 to 291. You can order online from http//www.westmarine.com or local
yacht chandler.

Gruessen/DF,
Frank
**********
********
The fellow is trying to rig his backstay for HF antenna use on a cruising
yacht, like the rest of us do, and apparently dismayed that this might cost DM
600. Doing it will likely cost this much or more, and is worth every cent
(unless one thinks being dismasted in a gale is entertainment). Can we please
get the rest of "Musings of Standing Rigging Terms by Landlubbers" and "How to
translate German by Guessing" off rec.radio.amateur.boatanchors, so we can get
a few more B/A's traded and fixed?

Please read the "send to" on replies to avoid crossposting over and over again.

Actually, the worst part of the ship to be berthed in is near the Chiefs
mess after "Chili" night... ;)

The back part of the ship is generally referred to as "aft" or "stern"...
old sailing ships used to have a "quarterdeck" which was generally an
elevated deck in the aft of the ship often where officers were berthed.

I have the following Radio, and electronic equipment for sale. Reasonable offers or trades for radio or Pentium/K6 computer EQ. will be considered. All working last time tested unless noted. Shipping is extra.
Thanks

• Tempo-1- Tube type Ham Transceiver/with Power Supply 80-10 meters. Looks good and works well. 100W output. $200

• Motorola VHF Transceiver All tube Model: PA8270J SER.NO: 8697. It receives on 150.750 & 150.570 and transmits on 160.025. There is also a tone Signal and intercom control on front below speaker. This is the type transceiver that was used by police and fire dispatchers in the past.
Don't know if it works. $75

• Heathkit HW 101, 80-10 meter transceiver. No Power supply. It is receiving, but don't know about transmit. Not able to test. Looks are 7/10. As is $100.

• Hallicrafters Model S-108 SW Receiver with a calb. Ham band spread. Looks good works well.$75

• MFJ Rtty/CW Computer Interface Model MFJ-1224, used for copying code from the radio to your computer. $50

• Pearce Simpson, Guardian 23- All tube CB Transceiver/with mobil power cord and mounting bracket. Looks and works Good. $100

• Traynor, Group Two B- Audio Amp Head. High/ Low mic. in puts. Master volume, volume, bass, treble and tone shaper controls. $125

• Channel Master- Tube Stereo Receiver (Model 6612) and matching amp (Model 6601) Looks good and plays on FM. AM not working. $125

• Sams CB Photofact- Several volumes, some continuos: numbers as follow: Continuos 1- 55 and 57- 65. Individual 70,72,80,88,93,98,104,120,122,128 178,190,226. Also have some two of same number. $3.50 each. Special discount price for all.

• AR Inc.- Stereo Amp, all solid state. $100

Yashica Eletro 35- 35MM Camera with Telephoto 1:4 , Wide Angle 1:4 ,Tele-wide finder lense and flash attachment. $100.

## 2392. Cardmatic tube tester programming instructions

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-02-14 00:00:00 UTC
From: nabil@user1.teleport.com
Message-ID: <6c3som$d0f$1@user1.teleport.com>
Source record: 110056
Cross-posted to: rec.audio.tubes,rec.radio.amateur.boatanchors

My first attempt at OCR was the hard to find instructions of how
to program a Cardmatic by punching your own cards. It can be found
in http://www.spiritone.com/~nabil/hickok/howto.txt and a pin/function
chart at http://www.spiritone.com/~nabil/hickok/program.txt which I
put together myself. You also need the schematic and theory of
operation, but these are in the standard operation manual.

These files are both referenced on my USM-118 Cardmatic tester page at
http://www.spiritone.com/~nabil/hickok/ along with other (I hope) useful
data and tables.

Have the following for sale:

Heath Mohawk receiver. Front panel good. Cabinet was repainted with fairly close match of original paint. This unit was working when purchased from a local ham about a year ago. Dial drum has some cracks, but it's not too bad. No manual. $100.00

The above item came from a friend of mine who needed the room. Now, with 2 small kids running around who need spring and summer clothes for school, it's time for me to say goodbye to this monster.

National NC-173. Not very pretty. Front panel isn't too bad but case needs refinishing. Inside needs cleaning too. I bought this about 5 years ago and at that time I was told it was working. I never powered it up. No manual. $100.00

Like the Mohawk, it's in my way and my wife can't wait to go shopping for the kids (what about me??)

No shipping, but I am willing to meet half way (up to 100 miles) for delivery. I'm near Allentown, Pa.

Please e-mail if interested. Thanks!

John Schell N3AB

I'm looking at getting ahold of a decent oscilloscope - what models, features to look for and what to stay away from?

I primarily use this for vaccuum tube amps and preamps (audio) so I dont need anything too fancy (or expensive). Id like to keep it around $200 or so....

Matt

A hint for all your folks who still use mechanical teleprinters...

WD-40 works very well as a rejuvenator for dried-out ribbons. The stuff evaporates quickly and the effect won't last for more than a few days, but you'll get nice dark printing for a short while.

Give the ribbons a good spray on Wednesday the 18th and be all ready for GreenKeys...

Me? I'll be banging away on 3585...

73
Dave Ross KA6EPI ross@hypertools.com

Hello Jeff,

I'm perfectly aware of what the foc'sle is, having spent some time on
sailboats as well as 41/2 yrs in the U. S. Navy. I don't understand
what your point is. My discussion refers to the meaning of the german
prefic "back" in the context of Backstag, which I believe is the
german for "forestay". Perhaps my meaning wasn't clear.

# 2457. Computer program for boatanchors

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-02-15 00:00:00 UTC
From: Carl Yaffey <cyaffey@sprynet.com>
Message-ID: <6c7g4u$tc$1@juliana.sprynet.com>
Source record: 109971

I'm considering writing a program that would allow you to store and retrieve
boatanchor resource information such as web pages, parts suppliers,
nets, magazines, newsletters, repair persons, etc., etc.
I would load it up with everything I could find as a start, and you would be
able to load in anything else that you desired. It would have, of course,
cool ways to
search for whatever it contained.
You could use the pre-loaded categories or add your own.
Would something like this be of interest to any of you? If I go ahead with
this, I would sell it as "shareware" (you try it, you like it, you buy it).
Thanks for your input,

---

Hi Mates,
Been putting together an NCX5 et al station and am kind of
interested to see what an NCL2000 final amp will run (assumed to be
working and not in need of 8122s or what ever it ran. Will buy or trade
some of my junk. Have a wide variety of things to choose from. Let me
know when it's convenient, not a high priority item

Tnx for the read es 73

.............................

My father used to be a coastal telegraph
operator. Their station used to have
HRO500's. The biggest complaint was
the dial lights. If they go out
you have to do MAJOR disassembly
of the receiver in order to get
to the dial lights in order to
replace them .. be warned !!

Greetings to all,

Using the acronymn YOP here: Your Opinion Please ;>).

I'm about to acquire an HP606A signal generator and in this trade have
access to an HP4204x precision signal generator. 5.25" tall, rack mount,
pretty unit. But is it pretty useless or pretty useful? The HP
escrucheon (sp?) is labeled 10 hz to 1 Mhz. Has anyone any experience
with employing this type of unit and if so have you any recommendations
pro or con on its usefulness>?

73, Doug W5JV

Message-ID: <davidh-ya023080001502981410450001@news.getnet.com>
Source record: 110028

I am looking for the little red diamond shaped cloisonne National emblem that is used on the NC-200 and NC2-40D. It has the ketters NC in the diamond. My NC-200 has this and it also has the words "Silver Anniversary" on it. Would prefer one with Silver Anniversary but would settle for the same one without, Dimensions are approximately 1.25" across by 0.625 from top to bottom.

Anybody have one of these or an extra off of an old junker NC-200 or NC2-40D that they can sell me?

Please e-mail me directly.

73,

Dave N7RK

Hi Rich,

I've been looking for 8122 tubes for my old National rig.

Do you have some that you would sell or swap for 4CX250's?

I have some good articles from ARRL handbooks on high power VHF amps
using the 4CX250, but I've never seen any homebrew articles or
commercial companies other than National use the 8122 back in the 1970's.

A few posting on the ham newsgroups suggest that they are very fragile
mechanically as RCA built them less ruggedly than the Eimacs.

73's

John VE3PCN

# 2486. FS: Atlas 210X radios - qty.4 w/docking station

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-02-15 00:00:00 UTC
From: n3bj@aol.com
Message-ID: <19980215153601.KAA02820@ladder02.news.aol.com>

Robert,
the word back for the forcastle is also known in germany. BTW the backstag
is not the forestay (Vorstag in german). If a boat has backstags it has two
of them. They go from the mast backwards to either side of the boat, while
only on one side, the leffward, is tight.
I hope this description helps to locate that stay.

Andre

I've just learned, that in a dictionary for sailors these two stay are called this:

Achterstag=(standing) backstay
Backstag = running backstay

Andre

# 2501. FS: Drake 2B, 2BQ Speaker/Q-Multiplier

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-02-16 00:00:00 UTC
From: wetartie@ix.netcom.com
Message-ID: <N.021698.122737.21@rvl-md8-24.ix.netcom.com>
Source record: 109900
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.swap

Due to a surplus of receivers and resultant shortage of space,
I have for sale a Drake 2B receiver with the matching Drake 2BQ
Speaker/Q-Multiplier. Condition of this equipment is definitely
"Mint Collector Quality". On a scale of "1-10", with "10" being
"brand-new right out of the original factory box", this equipment
would conservatively be rated at least a "9.5" in all respects.

Will sell complete with a very high-quality copy of the Drake 2B
instruction manual, and a complete NEW (NOS) set of tubes for the
2B. Price as described is $300 firm (U.S. Postal Money Order only),
plus shipping.

Message-ID: <34E7F67C.7A10@iconnect.net>
Source record: 109910
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.swap,rec.radio.amateur.equipment,alt.ham-radio.marketplace

New baby forced relocation of my shack to different room, need money or smaller bookends!

Swan 500, cosmetically looks great, with manual (copy). With 117CX power supply (also looks great). Has a bad connection in the jones plug in the back of the pwr supply, you have to wiggle it a little to get the speaker to work.

Heathkit HW18 100 watt 3 band cw rig (80, 40, 15 meters), with manual (original) has non-heathkit tuning knob, tuning window is a bit yellowed so this is not a showpiece. Needs final tube (6GE5).Construction workmanship is good quality. I have not used this rig but has great potential for a CW boatanchor first rig.

I can e-mail images of these radios to anyone interested in them, including underside/construction detail pix of the heathkit. If you reply be aware of the change in my e-mail header which those of us who can't eat spam resort to.

Pricing: I will sell both radios for $210 and split the shipping with the buyer. I believe this to be a very fair price but if you don't and are interested in them convince me in some rational way, I'll listen- I can put a monetary value on the high SWR generated by my wife! I would also be interested in swapping for some VHF gear, namely a 2 meter amp, 2 meter transverter, or vhf all-mode rig- As long as they are smaller than what I have! Thanks for wading this far!

Mark White N9OHS

All the text below should tell the story. I guess that Willard is not
an Honorable Man, too bad there are very few of us left.

I also found that all the paper caps in the power supply have all
burst. That explains the HUMMMMMMM. So I have replaced them, as well.
$30.00, also some tubes, plus three hours of labor, and now I have the
radio in close to good working order, as it was advertised to be.

BEWARE WILLARD BURCH N4DXC!!!

james ABT ALL I CAN TELL YOU IS THAT I MADE SEVERAL CONTAIC`S
ON THAT SIX METER RADIO BEFORE IT WAS SENT TO YOU..
THE RECIVER WAS NOT DEAD..AND IT WAS TX.ON THE SAME FREQ.THAT IT
REC.ON
SO I DO NOT BELIVE ALL THAT ..
MABE A TUBE HAS GONE BAD..CHECK THE TUBES...
AND AS FAR AS THE REFUND THERE ARE NUNE..
I CUT THE PRICE 25.00 FOR YOU AND THEN IT COAST ME 42.00 TO SHIP
WITCH MEANS THAT I GOT 132.00 FOR THE RADIO..AND I THINK THAT THE RIG
IS
WORTH MORE THAN THAT..ANY WAY ENOUGH ABT THAT ..
SORRY THERE IS NO REFUND..73`S AND HAVE A GOOD DAY

# 2513. Viking or Valiant SSB Adapter

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-02-16 00:00:00 UTC
From: searay270@juno.com
Message-ID: <6ca490$4rh$1@nnrp2.dejanews.com>
Source record: 109912
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.swap

For Sale: Johnson Viking SSB adapter previously used with Johnson Valiant boatanchor transmitter.

Valiant sold at Orlando; SSB is still for sale. Excellent, complete speciman for it's age with only a few superficial blemishes on case - no dents. Includes original good condx manual, outboard power supply with 3 tubes, and cables to Valiant. Price - $325 plus UPS from 34241.

Figure on 2 packages to segregate the power supply. SSB itself is not too heavy.

E-mail inquiries to searay270@juno.com for more info.

For Sale;

1. Collins 28VDC to 115VAC/400 Hz solid state inverter, approximately 200 watts, with schematic and connector (DB-9) $75 plus UPS on 15 lbs from zip 95827

2. Monitor Scope foundation, 2BP1 CRT, contains internal HVPS and requires approximately 22vdc at around 1/4 ampere to run. Has two identical amps in the Vert and Horizontal. Completely shielded in aluminum housing plus MU-Metal liner around CRT. Has Beam squelch on the

vertical channel to prevent screen burns. Used in GRC-142 Data Modem as

a tuning indicator. Like new from Depot Overhaul with mating DB connector and complete print set. Can be modified for modulation monitor

or used as is for RTTY tuning indicator etc. Modification notes included. $50 plus UPS on 10 lbs from 95827

Thank you for the read

For Sale: 28VDC/50 Amp continuous power supply, PP4763A, 115/220 primary, Metered for DC volts and DC amps, Like new condition from depot packed AN/GRC-142 Ratt Vans. This supply will handle dynamotor loads without a blink. Perfect supply for the ART-13, GRC-19, GRC-3-8 series, GRC-9, 618T(3), BC375, a pile of Command sets, ARC-2, ARC-1, and the list goes on. Very quiet and well regulated output, BUT it is heavy (145 lbs shipped). About 18" cubed, it has flanges on the rear of the case that could be used to rack mount it from the rear, but will stand alone and is a good candidate for casters. Been using a few of these for some time to run my 618T(3)s and the original GRC-106A plus many of the items mentioned in this post. Fair Radio did have these units posted in their 1997 catalog flyer for around 200 bux plus freight. I'll take $175 plus UPS and will pay for the versapacking at ups. Calculate UPS from my Sacramento ZIP 95827. With schematics and wiring drawings.

Thank you for the read

NEW JERSEY ANTIQUE RADIO CLUB
Indoor RADIO SWAPMEET
Saturday, Feb. 21, 1998 -
At the National Guard Armory - Freehold, NJ.

The New Jersey Antique Radio Club will present its all-indoors Winter Swapmeet at The Freehold National Guard Armory,8:00 AM to 1 PM, with seller setup beginning at 7:00 AM rain-or-shine. Vendors for the Swapmeet will be offering a spectrum of collectible old-time radios - table-model, console, transistor, Bakelite, Communications Receivers - with relatedliterature and parts. Everyone is welcome!

Directions are available at: http://www.eht.com/oldradio/swap.html

MILITARY GEAR AND TEST EQUIPMENT FOR NJARC AUCTION, 2-21-98

Radar equipment
ASB-4 antenna switch unit
ASB-4 slotted-line antenna test set
ID-108/APS-15 indicator

Radar Countermeasures Equipment
AN/APR-4 search receiver with TN-17 tuning head (80-300 MHz)
PP-104/APT-5 power supply
R-44/ARR-5 VHF search receiver (Hallicrafters), 28-145 MHz AM-FM
T-26/APT-2 "Carpet I" jammer, 470-720 MHz
T-85/APT-5 "Carpet IV" jammer, 350-1400 MHz (two)
TN-17/APR tuning head (80-300 MHz) in CY-57/APR-1 case
TN-18/APR tuning head (300-1000 MHz) in CY-57/APR-1 case
Unident. radar pulse analyzer/panadaptor

Test Equipment
BC-221 frequency meter, metal-cased model (two)
BC-906 frequency meter
Boonton 160A Q-meter
Boonton 190A VHF Q-meter
Boonton 275A transistor test set
Empire NF-105 noise & field intensity meter, w/ manual, tunersts for 20-200, 200-400, & 400-1000 MHz
General Radio 720A frequency meter, 100-210 MHz
General Radio 761 vibration meter w/ probe
H-P 610B UHF signal generator
Stoddard NMA-5 noise & field intensity meter (Navy TS-587/U), with tuning head for 15-125 MHz
Tektronix 514A scope
TS-174 frequency meter (20-250 MHz version of BC-221)

TS-186/UP radar frequency meter

Other Gear
BC-688A receiver and BC-689 transmitter (SCR-518 radar altimeter)
Boxlots of parts, wire, miscellaneous, sundry, and undefined Dukane PA amp (P-P 5881s), less tubes
General Radio 715A DC amplifier, in glass-front case to match Esterline-Angus chart recorder
High-voltage insulation tester, Variac-controlled to ca. 10 kV DC
Inident. G-band IFF set (partial)
Link VHF-FM pack radio
PE-125AX vibrator power supply (Signal Corps)
Precision tube testers CR-30 and 1012
R-9A/APN-4 LORAN receiver and associated indicator
RCA MI-7603A '30s police-car receiver, 30-41 MHz AM
Rek-O-Kut N33H stereo turntable
Tubes: flats of new, cartons of used

# 2518. FS: More Boatanchors

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-02-16 00:00:00 UTC
From: n3ab@fast.net
Message-ID: <34e8b987.116276@news.fast.net>
Source record: 109917

Have the following for sale:

Heath Mohawk receiver. Front panel good. Cabinet was repainted with fairly close match to original paint. This unit was working when purchased from a local ham about a year ago. Dial drum has some cracks, but it's not too bad. Have manual copy. $100.00 No shipping on this unit, but will meet up to 50 miles for delivery.

Heath HR-10B receiver. Front panel excellent. Case has a few minor marks. Works. Have manual. $65.00 shipped lower 48.

Heath MR-1 Comanche receiver. Included is the UT-1 power supply for it. Nice shape, front panel very nice with chrome knobs. Some stress cracks on dial drum, but not too bad. Unit works but is distorted on SSB. Have manual copy. $100.00 shipped lower 48.

Please e-mail if interested. Thanks.

From: dx40@juno.com
Message-ID: <34E8C11B.70EA@juno.com>
Source record: 109918
Cross-posted to: rec.audio.pro,rec.music.makers.marketplace,rec.radio.swap,rec.radio.amateur.boatanchors

FREE for the pickup! (Tacoma, WA)

19" Equipment rack built into desk (commercially made unit) 12 rack spaces.

4 foot wide desk with heavy particle-board top in a wood grain finish. Has heavy-duty metal frame base with a 12-space 19" equipment rack on the right side. Has standard opening for a normal chair. Top has several large holes factory drilled near the rear edge for wiring to equipment.

Includes a 12 space rack mounted turntable (78's too!) and a 2 space black panel with a couple of VU meters, toggle switches, etc.

Great for home recording setups, ham radio desk, or whatever. Make a complete studio in one sitting space.

I have several jpeg photos available to see it.

And best of all, it's FREE FREE FREE! All ya gotta do is drive to Tacoma, WA and pick it up. Will fit in any pickup truck, SUV, or tallish station wagon.

email if interested,

Dave dx40@juno.com

# 2548. Collins R388/URR Metal Nametag needed.....

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-02-16 00:00:00 UTC
From: radiorob@serix.com
Message-ID: <34e7a556.40342247@nntp2.uunet.ca>
Source record: 109985

Hello Guys:

I just picked up a nice Collins R388/URR (51J-3) Receiver that is complete except for the Metal Nametag that attaches to the front top center of the receiver by 4 tiny screws. I would very much like to find an original nametag to affix to this receiver. If anyone has a Parts Unit R388 that still has the metal nametag attached.....I'm at your mercy!! Please help this fine receiver get back to 100% original condition!!Please email me direct at radiorob@serix.com if you can help.

Thanks...Regards....ROB.

Ray - the D if designates the HF model that covers the broadcast band,
and the diversity model is sometimes referred to as an AR88F. It says so
in the manuals if you have the right ones.

Source record: 109808

Hi all:
I have a powdercoated black wrinkle DX-100 cabinet for sale CHEAP. The catch is that it is missing all its hardware. It doesn't include the inside hardware (easily found in most well stocked hardware stores) or the brackets. Overspray the wrinkle with near matching Heathkit Gray and you have yourself a spiffy looking cabinet for that DX-100 you've been restoring. Also, no feet. $30 plus shipping. Cal, N6KYR.

Message-ID: <19980217015400.UAA17170@ladder03.news.aol.com>
Source record: 109843

We have written a Toroid software package for use DC to 300 Mhz. Many Years of research has gone into error corrections for the low perm cores , 200 & 360 degree coverage as well as SRF for series and shunt coils. Much of this has come about as a request from Micrometals. The pin point accuracy allows us to add a custom core feature for custom shaped cores, stacking cores side by side and machining cusom phenolic cores from plastic, teflon, wood, ect...
Download a demo or just view the software main screen at our web

Handles a medium size tri-band yagi like the Cushcraft A-3 or A-4. The rheostat inside the controller needs cleaned. The unit works okay but the meter is a little jittery because of the dirty rheostat. Have both the controller and rotor. It is an 8 wire rotor. $75.00 plus UPS from San Diego zip 92139.

# 2589. Re: HRO 500 Opinions?

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-02-17 00:00:00 UTC
From: n4xy@bellsouth.net
Message-ID: <34e9111d.42952872@news.atl.bellsouth.net>
Source record: 109854

I was fortunate enough to obtain one from someone who bought one of
those new-in-sealed-box ones released from govt svc... but mine is
still beautiful to look at and use... it certainly rivals my 51S-1
under * normal * conditions, and is the best looking rcvr I own-and
collecting rcvrs is my passion! I "LIKE" (and rank) my 51S-1 2nd (only
to my RACAL RA6790/GM) and probably place my HRO-500 3rd,4th, or
5th in overall ranking of my 30 or so rcvrs (really think a lot of my
RACAL RA-17C & Collins 51J-4... they tie @ 3 & 4th probably-with an
edge to the Barlow-Wadley-loop RACAL and it's 6 feet(!!) of 35mm film
kHz readout!) If I was on a desert island, and for certain had to
maintain it if it broke, with unlimited parts but limited test
equipment, I'd probably go with the 51S-1. But otherwise, the
HRO-500 is still one of my all-time favorite rcvrs to use. Just make
certain the one you buy is working perfectly!

# 2591. For Sale: Vintage Eico Model 377 and model 315 Signal Generators

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-02-17 00:00:00 UTC
From: w5jv@juno.COM
Message-ID: <19980216.232400.9614.37.w5jv@juno.com>
Source record: 109856

For Sale: Vintage Eico Test Equipment (1950's era)

(1) Model 377 Sine Wave/Square Wave generator. 20 hz to 200 khz in 4 bands. Classic waveform generator of the 50's in traditional black knob on silver panel styling. Approx. 8 " deep, 7 " tall, 11" wide; approx. 20+ lbs. From the manual: Sine Wave range: 20 hz - 200 khz. Square wave range 60 hz - 30 khz (5% tilt at 60 hz, 5% rounding at 30 khz. Calibration accuracy: +/- 3% or 1 hz, whichever is greater. Frequency response: =/- 1.5 db, 60 hz - 150 khz. With manual copy. Produced well into the 60's as I understand it. Good condition; should clean up to excellent. From estate. $45 plus shipping from 70806.

(2) Model 315 Signal Generator. Combined RF, AF, and modulator in traditional Eico black & red engravings on silver. Fairly rare unit now with unusual large half round glassed pointer dial with smaller centered vernier. Case is approx. 11" wide by 13" tall by 4" deep. Dual black scale (for RF I believe) and red (for AF I believe). AF Frequency output would be 200 hz to 50 khz. RF Frequency output would be approx 75 khz to 150 Mhz. Not quite art deco, but certainly de ja vu radio era. They don't get any more displayable and still useable than this. Original condx., working, not calibrated. Late 40's, early 50's piece. Great bench item. Fair to good condition; should clean up nicely. From estate. $75 plus shipping from 70806.

If you are building a classic tube ham station and are considering a period test bench to go along with it, here are two very nice pieces. Still useable, still fun to work with. First come, first served but will keep a list until shipped.

73, Doug W5JV
w5jv @ juno.com

P.S. The Eico Model 460 Oscilloscope has been sold.

# 2593. Re: Beware of Williard Burch N4DXC

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-02-17 00:00:00 UTC
From: n4xy@bellsouth.net
Message-ID: <34ee2105.47021453@news.atl.bellsouth.net>
Source record: 109858

Excuse me Frank... you seem to be ignoring several of Willard's statements in his ad and subsequent email(s):

He said twice in his ad that the radio might need cleaning but was "working" and "good". Is their 'difference of opinion' you refer to that the radio does not work? Whether it is as clean as he thought it should be is a difference of opinion... an unuseable radio in neither "working" nor "good" condition is absolutely not a mere 'difference of opinion'.

I don't know if there was sufficient interchange between these two guys for Dave's public statements to be completely justified-but he has little other recourse when the other guy simply and flatly refuses to refund his money, or make it good in any way.

As to Dave being thrown off this USENET group, I would suggest to you that a guy who KNOWINGLY sells a defective radio described as "working" and "good" would be guilty of no less than fraud... and someone who flatly refuses to refund money as Willard did certainly SEEMS less than innocent in that regard. If someone sold ME a radio under those terms and it turned out that badly, and then he went on to flatly refuse to refund my money, he could look forward to visits from the postal inspectors, as well as a summons to small claims court... and yes, it'd be well worth some of those frequent flyer points and even a local lawyer's fees to see that he did not so flatly refuse to make it right the next time for the next guy.

Personally Frank I wonder about YOUR motives here... are you just a would-be net-cop? Perhaps a friend of Willard's? Whatever, I would suggest that you should give some prior thought to commenting on matters that appear to be seriously beyond your analytical abilities. Dave is clearly being mistreated in this situation, Willard is clearly not being a very nice guy. Where do you come in at all-considering your obvious misusage of the words: "misunderstanding" and "difference of opinion"? This is not about a "difference of opinion"... this is about a piece of equipment described as working that doesn't-and about the failure of the party responsible to live up to his obligations. There's nothing at all to misunderstand.

If the ad ran here, the abuse occurred here. The correction-or lack thereof-should be brought into the light here. Else, how do the rest of us avoid the person being less-than-cooperative?

Maybe it was damaged in shipment... maybe a lot of things... bottom line is that the sellor flatly refused to make it right. I wouldn't want to do business with him, and I'm glad I now know better.

And yes, I quoted you below... wouldn't want anyone thinking I had
misquoted you.

# 2596. Re: AR88 D/ HF/LF etc

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-02-17 00:00:00 UTC
From: robinson@srsuna.shlrc.mq.edu.au
Message-ID: <6cbdpd$f0g$1@sunb.ocs.mq.edu.au>
Source record: 109861

Hi there,

I realise this is a week old, and the thread was just about exhausted,
but I found this.......

"The "D" in the AR88D indicates that provision is made in the receiver design
for diversity reception. R.C.A. manufacture a standard rack to accomodate
two AR88D's and a diversity switching unit which automatically selects the most
useful signal from separate aerials, and feeds this signal to one or other
of the receivers."

Getting The Utmost from the AR88,
W.K.Miller (G6QF)
The Short Wave Magazine,
Volume XI
April 1953
Page 79-84

The quote is from the 3rd last paragraph.
He was under the impression it was D=diversity.
(His last sentence sounds a bit strange to me!)

I could sure use a manual and/or schematic for a Triumph Model 180
Wobbulator (sweep generator) from the 30's. Any help appreciated...happy to
pay copying/postage costs.

Thanks,
Walt

Do you have crystals to sell?

Would you like to buy some crystals for those old boatanchor rigs?

Please get your free listings on THE CRYSTALS PAGE at:

http://www.mnsinc.com/bry/xtalpage.htm

There will never be a charge for this service.

We especially need to hear from those of you who have crystals to
SELL! There are only a couple of listings for that right now!

Bry, AF4K / G3XLQ

Sometimes a radio does not survive beingshipped around the country in
a cardboard box!

Can't you both work this out?

Maybe instead of just giving up, the two of you should contact the
freight carrier and file a claim for the repair of it?!

Source record: 109887

Neil

Do you have a power supply for KWM-1 and what is the physical and
electrical condition of the radio.

I have a an excellent condition KWM2 WE with 516F2 RE. This is 9.5 out of
10 or better. Real beauty. It has the Waters Notch Filter attachment
added and the Water RIT. I am not sure if the RIT works properly as it only
tunes about +/-300 hz. Everything else electrically 100 percent.

>anything else you might think I should need.

Only problem I see is your expectation of 56K access over the amateur VHF
bands with (ordinary?) radios. NOT easily possible, if at all. You'd need a
broad band type transmitter receiver (2) and that won't be as easily obtained.
Most high speed amateur user operations are at 9600 baud now... that's about
the limit of ordinary ham gear... and far too slow for regular internet web
access.

One thing to watch out for: I don't know about the expensive dvms, but the one I have has a plastic case, and if theres a transmitter running and a little rf floating around, the thing goes crazy with or without an rf probe. I seem to never have the problem with my old vtvm, probably because it has a metal case.

Another short point. In a sailing vessel, the foc'sle (derived from forecastle?) was also the most likely downwind point in the vessel. Therefore, the least desirable real estate, especially after six weeks at sea hauling a cargo of goats.

Guys, here is an update, and my thoughts.

The bottom line is Willard just flat is not willing to do anything, as you all have read. He is wrong for doing so.

Since he is not willing to do anything, I have been working on the radio. I now have it up and running, here is what was wrong.

3 bad tubes, VFO way out of adjustment, all paper caps in the power supply had burst, and where casuing lots of HUMMMMM.

The tubes cost me about $10.00, the caps cost $30.00, three hours of bench time. I will not count that. So all Willard had to do was ask me how much I thought the radio was worth, I would have asked him to send me a refund of $40.00 to cover the parts, and would have been well.

I bought a hallicrafters SX-71 a few weeks back, from a guy who also said if was in good shape. When the radio showed up, the cover was off, all the cover screws were missing. One of the dial strings was broken, not to mention that it was deaf as a post on some bands. So I wrote to him and told him I was not happy. He asked me what I thought would be fair, I asked for $30.00 back, and he sent it. This was an honorable man.

As far as my posting private E-Mail here, it's only private if I wish it to be, if I wish to share it with the world, that's up to me! I asked Willard to do the right thing, he refused. I posted, we should all post when we are takin like this. That might make guys think, before they sell someone junk.

73 Dave

By the way if you are interested in dealing with a Honorable man see my web site, for stuff for sale..

All winged. Trade the vfo for a japanese rig or maybe an HF amp. Sell outright for $700.00.

Trade the KWM-2A and supply for a japanese rig (TS-850SAT, TS-940SAT) and/or amp or sell outright for $950.00.

Cosmetically excellent. Fully operational. All items just came back from an in-depth alignment by a local engineer. If you are looking for a known good 2A this is it.

Hello Dennis,

You don't have to replace ALL of the capacitors in the BC-348, just the ones in the rectangular black plastic case. There are 18 of them, if I remember right, and one of them is inside the BFO assembly. They are nominally .01 uf at 400 volts. For some reason they have a tendency to go bad in all sorts of ways (open, shorted, leaky, intermittent, etc.) and yet some of them will be perfect forever. Often when they fail they will take a few other parts like dropping resistors with them. Rather than struggle as they fail one at a time, I'd recommend replacing all of them at once and then you're done with it. I did this to a BC-348R and it became a whole new receiver - never worked better! Disc ceramics are fine if you don't care about historical correctness, but I found a pile of nice micas that looked just right.

Note that the B- in the 348 series is NOT grounded, and should not exceed 230 volts or you'll start burning things up.

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-02-18 00:00:00 UTC
From: w5jv@juno.COM
Message-ID: <19980217.233501.4734.0.w5jv@juno.com>
Source record: 109821

For Sale:

(1) Hammarlund HQ-100 style cube speaker. Increasingly hard to find gray Hammarlund wrinkletex finish for earlier HQ models. Not new, not beat up, just aging like we all are. Traditional Hammarlund marblelized grey fabric, unit about 8" x 8 x 8 or thereabouts. No emblem but I think some of the Hammarlund speakers were designed with a plain front as I have seen pictures in the old Allied catalogs without the H. Correct me if I am wrong. Original speaker and cord. Press board bent but easily removed and replaced or straightened. $55 plus shipping from 70806.

(2) Flush mount 3-Way 6 X 9 speaker kits. (2 pairs available) 60 watt capacity each speaker. Speakers bolt right to surface. Bass increased by porting rear mounting surface. Can be installed flush mount on your wall or on rack panel monitoring racks cutting ports in the rack panels behind the flush-mount enclosures to extend the bass. Very nice sound that way. NIB. $35 pair plus shipping to your door.

(3) Flush mount 2-way 5 1/4" speaker kits. As above but 30 watt capacity each speaker and slightly smaller. Good voice sound. NIB. $25 pair plus shipping to your door.

(4) One pair of standard heavy duty 6 X 9's with molded non-resonant panels and enclosures. Color is charcoal. Would make two excellent communication speakers. Enclosures have speaker terminals on rear for spring loaded hook up. New. Both enclosures, panels, and speakers: $50 plus shipping from 70806.

Please list your zip code in your reply.

David,

I'd be interested with getting a copy of your pinout. I've been looking at doing the same. My only concern is the bias voltage. The 32S-3 uses 275V, the Heath PS lets you select either 250V or 300V. I really didn't want to hack it, but I guess if I really want to match it well I need to.

I'm not sure what the voltage difference will really do. My tube theory is really very rusty. Time to break out all the tube manuals.

I have seen several postings that I felt were not appropriate for this net. Just
because a person may be offering equipment and/or services to others in this
group does not mean that person has one iota of integrity or honesty. I abhor
deals that are mis-represented or where half-truths are stated . . . in the effort
to get a deal consummated.

However, airing one's dirty laundry on the B-A nets is not the place to do it. Further,
if you do you are putting yourself into a precarious position with
potentially slanderous statements. Further still, this is not the kind
of stuff that the B-A lists are for - - the laws of this land give ample
opportunity to air your grievances - which is where these things should
take place.

Let's all try to keep a focus on trading gear, cleaning out our attics,
trading information and keep the B-A nets clear of these types of
remarks.

This is just one man's opinion who has to read this trivia - -

You know, Lane, I enjoy reading your posts. You certainly stirred 'em up with
your KWM-2/516f2/312b5 post. It sounds like you have nice equipment.
I must question, however, whether you really sell stuff or not. I have done
MUCH
business over these groups, and can tell you, nothing sells - for 'cash'-- at
so called "market" prices. You either lower the price, trade (like you're
doing)
or pay shipping on Very heavy stuff!!

For example, a KWM-2A in the condition you describe will actually "bring" $5-600

CASH.
The 516f-2 will bring $200 CASH.... and the 312b-5 will bring $500 CASH....

BTW, I DO NOT WANT TO BUY THEM. I HAVE THEM> I am not
chiseling..... but these prices are what I would expect to get in CASH. plus
shipping - if I WERE SELLING. THIS IS NOT A PRICE COP, WHINING
POST.
I do, however, hate the way this stuff clutters up the group. If you want to
sell the
stuff, put a price on it where it'll sell in a few days ( I DO!)

BTW, I'll take your 312b-5 for $700 -- IF you'll take my $300 312b-4 and
my $200 (mint) PM-2 in trade. I'll pay shipping on mine, too!!

SEE WHAT I MEAN???

73, and in spite of this, I really do enjoy your posts!!

# 2664. FULL INTERNET Access VIA Packet Radio??

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-02-18 00:00:00 UTC
From: moss.i@virgin.net
Message-ID: <34eb0068.23239366@news.virgin.net>
Source record: 109829
Cross-posted to: uk.radio.amateur,rec.radio.amateur.antenna,rec.radio.amateur.boatanchors,rec.radio.amateur.digital.misc,rec.radio.amateur.dx,rec.radio.amateur.equipment,rec.radio.amateur.homebrew,rec.radio.amateur.misc

To all that can offer assistance

I believe there are things called packet radio internet gateways. What i want to do is to have FULL Internet access ( not just EMAIL ) through packet radio, via the said gateways so as to do away with my ISP which costs me £12/month, and the PHONE bill, which I think is a disgrace that we have to pay for. We pay for calls to the Internet in England!!!!!!

PLEASE NOTE:-If you have never heared of an packet radio internet gateway, DONT reply to me saying youve never heard of it, and its not possible, because I jolly well know it is possible, this would obviously be the first time you have heard of it, so DONT bother to reply to me. If you DO know what I am talking about, I would very much welcome your input.

I need to know what equiptment I will need to do this, the cost, and if there are local gateways operating in the MHZ freq. range that will be able to cope with a high speed packet radio modem ( 56K + baud ), in the NorthWest region of England. From reading stuff off the net it wont cost a fortune to implement all this. I apparently need a TNC ( Terminal Node controller ), radio, amplifier, and Antenna, and anything else you might think I should need. Read some info about JNOS too, presume its possible to run TCP/IP over that, with WIN95, and all the traditional internet application programs running all above that, FTP, email, Netscape browser etc etc etc. I hope to run all that little lot from a 486AMD5x86-P75 ,256K cache,16MB, WIN95, which will more than meet the needs of the Packet radio interface.

If you can help would appreciate it

Cheers

Ian

I am off on a building project. I am going to build both a pair of
3-400s and a single 4-1000.

Looking for the following, will trade, buy, scrounge, and or beg.
Donations accepted and appreciated. Pointers to sources appreciated,
thanks in advance.

Large roller inductor for PI network
Air Variables for PI network
Vacuum variables for PI network
High wattage resistors for input T-pad
Sockets for 3-400s for use with chimneys
Another 3-400
Socket for 4-1000
Chimney for 4-1000
4-1000
Plate transformers - 3KV to 4KV
Filament transformers for 3-400s and/or 4-1000
Miscellaneous door knob and blocking capacitors
B&W bandswitch with inductor(s)

Anyone with a fried, trashed, or otherwise AMP with parting value, i.e.,
SB220/221 or something similar. Homebrewed certainly acceptable.

Have on hand to trade:

SB-102 w/Power supply. Tubes overall in good condition. Finals fine.
Can and will pull all to test.
One Westinghouse 813 - New.
EF Johnson socket for 813
Plate cap for 813 and similar sized caps
Junker HW 2036A
Stack of Heathkit manuals - New.
Also have typical parts horde.

Hope to get some good hits!

Thanks to all,

Bob Bethman

Source record: 109838

FS: Knightkit 83 Y 125 Manual for Electronic VTVM (same style as Eico 232). Very good condition, original Knight manual with classic blue and white cover. Cover about a 7 - 8 on a 10 scale. The inside is perfect. Looking through it, the kit assembly instructions are much better than I have seen in any Heath manual and you could as easily roll your own vtvm from this book. The VTVM scale is also reproduced so that you could scan and fabricate your own scale on any 200uA meter. Full size 8.5" X 11" manual. $8 which includes shipping.

# 2674. Collins 618S-1 Info needed

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-02-19 00:00:00 UTC
From: worrallp@syntegra.bt.co.UK
Message-ID: <34EC8433.573C@syntegra.bt.co.uk>
Source record: 109690

I am using a parts rig to build a TX for use on the military
Wireless net here in the UK (3625 Saturday 1000z).

Can anyone help me with pinouts and voltages for the PA and
Modulator modules? A pointer to any sites with info would really
be appreciated.

Thanks, Pete G4GJL

# 2675. Re: FULL INTERNET Access VIA Packet Radio??

Newsgroup: rec.radio.amateur.boatanchors

Firstly I would Like to THANK DAVID TSE for his very informative and HELPFUL reponse to my intial posting, CHEERS DAVE, I will ask you a few things in a moment

Before then I would just like to respond to ( I KNOW I SHOULDNT!!!! but I am going to ) the other previous respondees, who were of absolute NO help, and I suggest have responded to these series of postings because they wanna flame!!!!! SIGH.

Why I want to connect to the net without an ISP, is to improve my connection speed ( hopefully ) have a closer more intermate internet connection to the NET than my ISP can provide ( do away with firewalls etc BECAUSE I wanna experiment with net ) and NOT have to pay the PHONE bill. The Americans dont pay for local calls to their ISPs, until that happens in UK, I want another way of connecting that doesnt invole a phone bill. If people wanna pay for their Internet connection, well I aint going stop them. But as for me I want to explore the various technological solutions to this problem, because a) its interesting, b) will save me money, and c) will provide an answer as to wheather its possible to implement realatively cheaply.

In response to WALT davidsons comment, I dont mind paying the ISP costs but the local phone call cost I do object to paying for. It goes against the very spirit of the Internet. In America they can leave their computers connected to the net 24hours a day 365 days a year presumably, and all they pay is the ISP. Well thats What I want too over here.
Further while ever there are people like you Walt, who are happy to go along with the main stream, progress will be slow. The Innovators through history have always been the people who have not been satisfied with the way things are.
I have even considered a small cheap two way SAT link to the NET. Apparently Bill gates has one up on me on this one, apparently he intends to implement a SAT system which would enable anyone with a 2 way sat link, ( which units i think he is going to develope which will be very cheap ), to link to the NET.
I too think for better communications, much improved speeds and services, it would be better to connect to the NET NOT via a modem and PHONE line, and to dispense with that archic part of the link altogther. So I am not the only one who thinks the modem phone link is a bad idea.

Right so having outlined my reasons for wanting a different way of connecting to the NET I will now go on to respond to the points made

by David Tse

>There are no off the shelf TNC which will give your 56kbps air speed
>(or more). There are packet modems which are in use by various
>people, but not with a TNC. An example is the WA4DSY "GRAPES" modem,
>to be used by the P.I. synchronous I/O card by the Ottawa group. By
>the way, speed is measured by bps (bits per second), baud is not used
>commonly anymore as it refers to the change of phase per second, which
>does not correspond to the speed issue.

I Dont mind having to implement the link David by I/O card, and modem, infact this was the initial way I invisioned it to be done. I just read somthing about a TNC. I presume then David if It were possible to implement the link via Single PC ( by the Way I have some 386s hanging around doing nothing ) I would need the following??

PC--i/o card--Modem--Radio--Amp--Antenn

Then the software that would implement the TCP/IP levels and communicate with the tradional Internet Application Progs would be the Flexnet software you mention below, is this a commercial piece of software?

>Although JNOS might run under Windows, I am not aware of JNOS having a
>socket link or a network interface presence to Windows (95 or not).
>In order to use "traditional" internet apps, you need to use a stack
>which has connection with Windows networking interface. FlexNet is
>the only software I am aware of which can do that. However, I am not
>aware of FlexNet supporting the 56kbps GRAPES or any high speed packet
>modem (yet), although they have a modular design which gives it a
>future possibility.

> In order to have the connection
>with the user, (we are only doing a short hop point to point now), we
>are currently building the 56k as a repeater to be put somewhere high
>up on mountains. Stilll people with no line of sight to these
>repeaters will not connect as any reflections will distort the signals
>badly.
>
Whats the max. range ( in miles ) of line of sight comms so as to implement a 56K connection for eg?

From your posting David then, I take it that full internet connection with all the traditional internet programs is possible to implement and that what I wish to atchieve is possible.

The implemtation of a Gateway you mentioned 56K wirth ethernet link is interesting way to do it, and as you pointed out may be the only way possible with speeds of 56K and above. But Hopefully my research will determine wheather it will be possible to implement a stand alone PC connected to modem and radio as outlined above for 56K and above.

Any Idea of costs involved David

Cheers

Ian

All of this is interesting, but bears no relationship to the
question poised: What is the impedance of a RF probe
when used on a ll meg. meter?
I suspect the poster wants to know what sort of loading
will occur on RF stages when using a diode detector probe.
The answer would most likely involve knowing the frequencies
involved, the internal capacitances and inductances of the
probe assembly, etc. There is probably no easy answer
based on the data given...

These high speed links are normally on a point-to-point basis, not for general user access, normally for mail links etc. I think they are normally on the microwave bands, probably 10GHz.

Normal BBS/node access is 1200baud or 9600baud. Don't forget that is the maximum uninterrupted data transmission rate - the actual throughput is dramatically reduced when the data is packeted (if that's a word?) and after collisions with other stations' transmissions. As an indicator 1200bd will facilitate a data transfer of 60 bytes/sec on a reasonably clear channel.

Even if you can get a 56k user access to a node don't forget that node won't be the gateway to the 'net. The TCP/IP routing will go through a number of other nodes which could be any bandwidth you care to think of.. and yours won't be the only TCP/IP traffic.

..Then don't forget BR68 1(7) and the other sections regarding message content.

Get an ISP with a local call number, put that in Friends & Family (if you're on BT) and save the surfing for the weekends. Then it's only 0.9p / minute.

(or alternatively you could work for a company with an internet-enabled network and RemoteAccess with dial back :o))

I sent this info to Ian via email.

Perhaps some of the naysayers will be swayed :-)

http://www.wa4dsy.radio.org/

Your connection to this site will be via amateur packet radio at 56k!!!

I can't find a better cookbook for implementing internet access
over amateur radio and would be keen to hear of one if it exists.

I have a Heath SA-2040 KW ant. tuner. I have added a heavy duty ceramic

switch to select dummy load, or 2 outputs, either through tuner or
bypassing tuner. Neat installation. Tuner working excellently. $150.

I need a round coax switch, with the SO-239 connectors coming out the
back. A Waters # 335 or a B&W 375 (newer # CSA6G). Thanks 73
Ron

Imagine you mean the National NC-60? It is a five tube AC/DC
from the late 50's or early 60's. It is not quite to cult status
yet and you don't see as many as you do the various Hallicrafters
S-38 series. I've seen one at a large local hamfest, fully operational
and in excellent cosmetic shape for $75 (before negotiations). I've
picked up three as rebuild projects over the years, ranging in price
from $10.00 to $30.00 in various degrees of "OK". Like anything,
one persons trash is another persons treasure!

Looking for a Collins 307E-1 Tuning knob for my 75A4.

Will also consider other compatible reduction tuning mechanisms or suggestions.

Thanks in advance!

Scott KD6CQ

# 2701. Info on Collins 32V-1?

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-02-19 00:00:00 UTC
From: Scott Gray <comm5@pacbell.net>
Message-ID: <34ED1B98.3BF9DFC6@pacbell.net>
Source record: 109717

Picked up a nice Collins 32V-1 this weekend. Cabinet is a bit rough,
could use a repaint of "St. James" wrinkle black. Nice condition overall
and appears to work! Plenty of drive and plate current on all bands, no
hum on the 'scope.. A little TLC and De-ox-it should do the trick!

What is the 32V-1 worth these days? Is it sheilded well enough for
"clean" non-TVI/RFI operation?
I would like to add my D104 (crystal element) and join in on 75 AM (
and can't wait for 10 to open)!

Thanks,

Scott KD6CQ

## 2703. F.S EFJ Ranger

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-02-19 00:00:00 UTC
From: Scott Gray <comm5@pacbell.net>
Message-ID: <34ED2A2F.451C53C8@pacbell.net>
Source record: 109719

I have a beautiful restored Johnson Ranger (not a II) to sell off (or possibly swap).

Absolutely the cleanest Ranger that I have ever seen. Cabinet professionally repainted - lacquer coat - computer color matched. All knobs (and crystal cover) excellent - all markings and "white-dot" pointers. No visible wear external or internal. The front panel has a minor nick, but all lettering, Viking logo etc. are like out of the box new. Excellent specimen of the ultimate classic BA.

Internal cosmetics reflect possibly a "factory wired" model. Shiny surface no rust or blemishes topside or under. Recapping done only in the AF chain resulting in fairly "flat" audio. Accommodates a external audio EQ well (not included).

Electrically very sound. Plenty of grid current on all bands, puts out around 35-45 watts on AM, perhaps a bit more on CW. Fresh 6146B in the final, all other tubes check fine. All switches and pots are original and in excellent condition.

This is a early Ranger as it does not have the sub chassis with the 6AL5 /12AU7 grid block keying. The CW note is very clean, either VFO or Crystal.

I have most of the components to add the push-to-talk for phone operation, but never installed.

Included is a beautiful Electro-Voice "Mercury" model 611 and matching stand. Brushed Aluminum finish sparkles. About 8 to 10 inches tall. I won't sell this microphone separately. It really belongs with this Ranger.

Only known mods are a non original AC power cord/plug (fused-plug) and a small reversible power supply addition to supply bias to the modulator tubes.

Has a slight amount of "backlash" on the VFO. Have tuned much worse Rangers/Valiants.

Includes a W7FG manual.

I've decided to sell it to someone that may give it more use. I just have too many radios and most of my time has been spent on other BA projects as well as QRP operation.

I would prefer not to ship, but if the price is right I will pack it very soundly. You can pay shipping. Pickup from 95682 preferred, can drive a bit to meet if necessary.

Would like $300 for the entire Ranger / E-V Microphone and PTT "kit".
Will consider swap or partial swap for QRP gear or CW station w/ WARC
bands (Heath HR/HX 1680 twins or Ten Tec).

Located just east of Sacramento Ca.

Hi All:
Due to some queries about these parts, I am submitting this to the net
once again FYI:

Replacement long screws for the Ranger, Valiant, Courier, Invader, and
Pacemaker series transmitters.

$8.00 for a set of three screws for the Ranger (also Courier)
$9.50 for a set of four screws for the Valiant (also used in T-bolt, 500,
Pacemaker, and Invader xmtrs).

$6.00 for 2pin Amphenol/Wire Pro mic connectors. Used also in vintage
Heathkit, Collins, and other gear.

9 pin "octal" plugs and sockets (sorry, no shells). All NOS. $5.25

All prices shipped. Cal, N6KYR.

Well, I don't agree. Those who misrepresent the goods they wish to sell damage the credability of ALL who list things for sale, and raise doubts in the mind of potential buyers. The whole process of buying and selling thru the internet is scarey enough without allowing some to practice dishonesty.

From: arnoldg@vestdata.no (Arnold Goks&#65533;yr)
Subject: Plessey UHF receiver
Date: Tue, 17 Feb 1998 20:11:59 +0100

Greetings to all it this group.

My name is Arnold Goks=F8yr and I live in Norway, in a small place called
Balestrand by Sognefjorden. My main hobby is valves of every kind and
valve equipment - from computers to radar. I'm working as a psychologist,
so the hobby is relatively unrelated to my profession. Except that most
psychologist like to find out what has happened (to people), and
interest in valves is also digging in the past...
I'm running a company called DEMOSTENES and I'm selling all kind of
valves
all over the world (You can visit my homepage if you want)

I have a little problem with a monstrous UHF receiver I've had for many
years. This is a Plessey UHF receiver, Rec. unit 9096 Ref. no 10P/13247
It covers 225 - 400Mhz and has a lot of CV... valves. The HF amp and
mixer
have DET 23.
Can anyone help me with a schematic????

Regards,

Arnold Goks=F8yr

>http://www.dejanews.com/ Now offering spam-free web-based newsreading

Give me a couple of days and I can post a jpg file of the National NCL2000 schematic. It uses a pair in paralell. It is a grid driven amp with the grids swamped with a 50 100 W resistor bank. The 50 Ohm resistor is made up of two banks of 180 Ohm 5 watt film resistor 7 in paralell to form one bank. The two banks are in series to give 50 Ohms. Each band is about 26 Ohms. Standard PI network. There is a time delay relay to keep the plate and screen voltage off the tubes until the filaments warm up. The time delay is about 60 seconds. This is very important. The tubes will work well at 6 meters. They are rated to 500 MHz. The NCL2000 runs the plate voltage at about 2700 volts at full power out and does about 1400 PEP on 10M.

Regards
James

# 2719. For Sale: Eico Model 377 Sine Wave/Square Wave Generator

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-02-19 00:00:00 UTC
From: w5jv@juno.COM
Message-ID: <19980218.235918.11854.9.w5jv@juno.com>
Source record: 109776

Good Morning to all,

I've found one more Eico model 377. Here is the description:

20 hz to 200 khz in 4 bands. Classic waveform generator of the 50's in traditional black knob on silver panel styling. Approx. 8 " deep, 7 " tall, 11" wide; approx. 20+ lbs. From the manual: Sine Wave range: 20 hz - 200 khz. Square wave range 60 hz - 30 khz (5% tilt at 60 hz, 5% rounding at 30 khz. Calibration accuracy: +/- 3% or 1 hz, whichever is greater. Frequency response: =/- 1.5 db, 60 hz - 150 khz. With manual copy. Produced well into the 60's as I understand it. All original. Add $3 for manual copy. The inside is very nice, the outside is very dusty. From estate.

These are very helpful when working audio to see how the waveform is effected as the gain is increased. Also very useful as a signal injector. Nice vintage tube gear.

$25 plus shipping from 70806. Please send zipcode with request.

73, Doug W5JV

First of all, you got the name wrong. Packet radio internet gateway
has traditionally been a message/e-mail gateway only. On the packet
radio side it has traditionally been AX.25, and it routes messages
back and forth to the Internet. What you want is a TCP/IP connection
over packet radio. It has been done in various areas.

>PLEASE NOTE:-If you have never heared of an packet radio internet
>gateway, DONT reply to me saying youve never heard of it, and its not
>possible, because I jolly well know it is possible, this would
>obviously be the first time you have heard of it, so DONT bother to
>reply to me. If you DO know what I am talking about, I would very much
>welcome your input.

Well, you don't get to say the term right, so some people might get
confused.

>I need to know what equiptment I will need to do this, the cost, and
>if there are local gateways operating in the MHZ freq. range that will

Again, you didn't get the term right. What you need is a UHF or
higher frequency if you want to operate on amateur radio bands. And
just to be sure, check with your own country's band plan as I am not
familiar with yours.

>be able to cope with a high speed packet radio modem ( 56K + baud ),
>in the NorthWest region of England. From reading stuff off the net it
>wont cost a fortune to implement all this. I apparently need a TNC
>( Terminal Node controller ), radio, amplifier, and Antenna, and

There are no off the shelf TNC which will give your 56kbps air speed
(or more). There are packet modems which are in use by various
people, but not with a TNC. An example is the WA4DSY "GRAPES" modem,

to be used by the P.I. synchronous I/O card by the Ottawa group. By the way, speed is measured by bps (bits per second), baud is not used commonly anymore as it refers to the change of phase per second, which does not correspond to the speed issue.

>anything else you might think I should need. Read some info about JNOS
>too, presume its possible to run TCP/IP over that, with WIN95, and all

>little lot from a 486AMD5x86-P75 ,256K cache,16MB, WIN95, which will
>more than meet the needs of the Packet radio interface.

Although JNOS might run under Windows, I am not aware of JNOS having a socket link or a network interface presence to Windows (95 or not). In order to use "traditional" internet apps, you need to use a stack which has connection with Windows networking interface. FlexNet is the only software I am aware of which can do that. However, I am not aware of FlexNet supporting the 56kbps GRAPES or any high speed packet modem (yet), although they have a modular design which gives it a future possibility. The only other way to do it, which is the way our club (University of British Columbia Amateur Radio Society) has been doing, is to use Linux operating system, which has AX.25 driver for the P.I. card for the 56k link, and run this computer as a gateway. Then use a Windows computer connecting to this Linux gateway via a network connection (we use 10B2 ethernet). But you didn't mention you have another computer, which this needs. I am not sure how crazy your local packet group is, but it took us a long time and quite some money to build the system we have today. In order to have the connection with the user, (we are only doing a short hop point to point now), we are currently building the 56k as a repeater to be put somewhere high up on mountains. Stilll people with no line of sight to these repeaters will not connect as any reflections will distort the signals badly.

I am not sure if you have your licence yet, but may be that will be a first step. Or may be now you think paying your ISP isn't that bad an idea.

1) Using a receiver to monitor frequency while grinding is fact. It's what commercial manufacturers have done as a rough monitor of their processing. The freq seen this way is affected by the lapping machine, the pressure and the density of the abrasive slurry, so some empirical correction factors need to be made.

2) commercial Xtal lapping machines have planetary "Spirograph" plates with holes to take the quartz. Abrasive slurry is added and a weighted plate sits on top to provide controlled pressure.

3) Xtal manufacturers have proprietary recipes for choosing face profiling, disc diameters and deposited electrode dimensions and thicknesses that they've found minimise spurious modes, favour specific overtones etc etc. Some of these "designs" are good for specific purposes only over surprisingly small frequency ranges.

4) Cleanliness is important, so is getting the faces parallel. A very high degree of surface smoothness is necessary to get decent activity. Microscopic scores in the surface are the seeds of what you could think of as wounds in the crystal lattice. Good polishing, often finished by hand with an amazingly fine abrasive is used for xtals that need to go in low phase noise oscillators.

5) Deposited electrodes make much tighter coupling with the quartz resonator, and the size of the elements is a lot smaller in modern xtals, so the circuits that worked well tith the old FT243 era xtals, and what works with current types are quite different. few modern devices would survive the levels that some old circuits used to run at.

I've been collecting xtals for 25 years, I must have a few thousand. I've been building my own filters for some time, see Wes Hayward's "Intro to RF design" for a good text with free software... I've also been professionally involved in special low noise xtal oscillator development.

Cheers

I need crystal ovens for the Westrex model 9B2 SSB Radio Telephone.

Anyone have these that they are willing to sell? Anyone have any
information on this set???

Thanks!

Paul Troiani

> 73 , Don
>

I think vtvm's (I still have a Hewlett Packard 410B) would stand up better in high RF fields because they are much simpler. There's one, maybe two tubes, and they are easy to bypass because they need to handle only DC and sometimes low frequency AC.

A digital multimeter, on the other hand, uses a lot of active devices. It's digital, meaning it may run at relatively high frequencies, and you certainly can't bypass for RF when there is a signal at that point that you can't bypass.

The metal case might help VTVM's, but they could probably be made relatively RF proof even if they were in a plastic case. On the other hand, a digital meter probably would benefit from being in a metal case.

# 2739. help needed radio technical data

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-02-20 00:00:00 UTC
From: neil <neil@aade.com>
Message-ID: <34EDF847.1C36@aade.com>
Source record: 109598

DFD3 is a new digital frequency display to update boatanchors
to digital frequency readout.

DFD3 can autoprogram itself for over 100 radios, (at least as
soon as I am able to gather enough information)

I need help with data about some radios. The necessary info is:
1) number of bandswitch positions. (ie: 5)
2) crystal frequency for each band (and harmonic used if > 1).
some radios have auxillary band positions which did not include
crystals stock from the factory. Indicate these as "NONE" or zero.
3) for each band the lower band limit and upper band limit (ie: 3.5-4
MHz)
4) the VFO lower and upper tuning range (ie: 5-5.5 Mhz)
5) the tunable IF range (may not be the same for all bands) (ie: 3-4
MHz)
6) the second IF frequency (ie: 455KHz etc.)
7) the BFO crystal frequencies for CW, LSB and USB if any.(ie: 453.5,
456.5 KHz)

This could be in the form of a block diagram with all frequencies
marked on it or in tabular form.

If you are the one to supply this data for a radio and later purchase
a DFD3 I will throw in a backlit display upgrade free ($10 value)

If you are in a position to supply data for 10 or more of these radios
I will give you a DFD3 free.

If you have any of the following radios or manuals I could really use
your help.

FTdx560

For Sale:

I am selling this for a friend who does not have
internet access.

Yaesu FTdx-401 transceiver. Good physical condition,
face is nice. With matching speaker. Seems to be
all there, but is untested and sold as-is. It has
been on a shelf for many years.

I can email a jpeg photo.

lower price $205 includes shipping to lower 48 US. Prepaid
by USPS money order. Sorry, but no COD's.

Many thanks. Take care.

Dave dx40@juno.com

# 2742. Re: BC611 Handie Talkie

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-02-20 00:00:00 UTC
From: David Stinson <arc5@ix.netcom.com>
Message-ID: <6cl3d4$djp@dfw-ixnews6.ix.netcom.com>
Source record: 109601

"Reasonable" market rate for a BC-611:
Works, good paint, complete with all parts and hand strap, $150 U.S.
Average, needs paint, don't work and missing strap but restorable: $50 U.S.

Prices from several recent transactions.
Others may disagree.
Regards,
D.S.

## 2743. Gonset 6mtr Communicator

Newsgroup: rec.radio.amateur.boatanchors

From: badgerNOSPAMNO@telalink.net
Message-ID: <6ck0rq$icf@apple.telalink.net>
Source record: 109612

A year or two ago on the BA list there
was some discussion on the BIG HP
524 counters. I now have one, and it works
well. The disussion however indicated there
was an autoranging plugin that would work
with the unit and that I think extended its
range quite a bit. Anyone from BA remember
this thread or can tell me where to look.

Of better yet, the best way to search the archives
other than one day at a time over two years looking for
it?

From: w5jv@juno.COM
Message-ID: <19980219.224718.9950.27.w5jv@juno.com>
Source record: 109723

For Sale: Fairly collectible 50's Heath RF Signal Generator (Model SG-8). Small, light brown lunchbox size unit with aluminum carry handle engraved "HEATHKIT PRECISION". Front panel has a couple of light scratchs from probe handling I would guess but which are barely noticeable and a small bb size impression on the bottom of the front panel wrap around but it does not show. Easily formed back out. Panel looks almost new. Sides, back, bottom as well; very pretty brown wrinkletex. Top is dusty with a couple of specks of white latex wall paint from being stored on a shelf near a newly painted wall. Looks original, no mods. 6C4 and 12AU7 complement I think. 160 kc to 110 mc in 5 bands. Internal and external modulation. Big knob and vernier okay. Missing one pointer knob. Powers up, shows gain response and some control but needs checking and TLC. $55 plus shipping from 70806. There's not many of these around anymore folks. FCFS.

Hello Bob, the problem is that the person who posted the query in the UK. Internet Gateways (and phone patches) are ILLEGAL under the UK license conditions, and with a few rare exceptions the UK packet network still mainly runs at 1200, with occasional 9600 ports, plus the odd once-in-a blue-moon high speed microwave band port. The information that he has been given is correct, specifically for the UK.

Source record: 109736

I'm the proud owner of a HQ-129. Compared to the 'newer'
Hammarlunds I really like the large proportion Var. caps cans, coils etc. Is
there much of a performance difference between the 129 and say a HQ-140
through HQ-180?

My main question is if you replace a tube (other than audio, rectifier etc.)
do I need to worry about realigning the radio? I own a Drake R4B and the
manual specifically mentions that alignment is not necessary after a tube
replacement but I have not been able to confirm if this is the case with the
129.

Thanks,

Steve

# 2770. Help : Crystal frequencies for GE Custom MVP

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-02-20 00:00:00 UTC

Hi,
Can anybody tell me how to calculate the crystal frequencies for GE Custom MVP
2m transceiver? ( Tx and Rx )
I am also looking for the manual for MVP.
Thank you for your help in advance.

Wonki, WM2X...

Does anyone out there have a "reasonably" priced BC611 handie talkie for sale, like the one that John Wayne used in all the WWII movies. I stress "reasonale" because of the lousey US/Canadian exchange rate.

Also, looking for an early 60s version of a Motorola lunch-box style radio that used the hearing aid tubes. I has on in the olden days, but of course got rid of it.

> in the manuals if you have the right ones.

The "D" in diversity signifies that the AR88D was intended for diversity
reception. Defence force stations and other monitoring stations used
this facility so as to improve reception etc.
Some RCA manuals actually spell this out clearly.
The "S" meter was an additional option, which was housed where the name
plate went.(Top right.)
The early models which can be identified by the tuning scale not having
the alternating black and orange stripes on the tuning range had manuals
which clearly explained the diversity function.

The "D" certainly indicated diversity reception.

Maurie. VK3CWB.

O/: >
O/:
O/:
O/:
O/: 1) Using a receiver to monitor frequency while grinding is
fact. It's
O/: what commercial manufacturers have done as a rough monitor of
their
O/: processing. The freq seen this way is affected by the lapping
machine,
O/: the pressure and the density of the abrasive slurry, so some
empirical
O/: correction factors need to be made.
O/:
O/: 2) commercial Xtal lapping machines have planetary
"Spirograph" plates
O/: with holes to take the quartz. Abrasive slurry is added and a
weighted
O/: plate sits on top to provide controlled pressure.
O/:
O/: 3) Xtal manufacturers have proprietary recipes for choosing
face
O/: profiling, disc diameters and deposited electrode dimensions and
O/: thicknesses that they've found minimise spurious modes, favour
specific
O/: overtones etc etc. Some of these "designs" are good for specific
O/: purposes only over surprisingly small frequency ranges.
O/:
O/: 4) Cleanliness is important, so is getting the faces parallel.
A very

O/: high degree of surface smoothness is necessary to get decent
activity.
O/: Microscopic scores in the surface are the seeds of what you could
think
O/: of as wounds in the crystal lattice. Good polishing, often
finished by
O/: hand with an amazingly fine abrasive is used for xtals that need
to go
O/: in low phase noise oscillators.
O/:
O/: 5) Deposited electrodes make much tighter coupling with the
quartz
O/: resonator, and the size of the elements is a lot smaller in modern
O/: xtals, so the circuits that worked well tith the old FT243 era
O/: xtals, and what works with current types are quite different. few
modern
O/: devices would survive the levels that some old circuits used to
run at.
O/:
O/:
O/: I've been collecting xtals for 25 years, I must have a few
O/: thousand. I've been building my own filters for some time, see Wes
O/: Hayward's "Intro to RF design" for a good text with free
software...

Yep - really your best bet if you have a problem is to consult the RIP-OFF web page and see if someone is listed there as a miscreant!

Often it is not intentional when something goes wrong.

Things do happen to people unexpectedly. They get admitted to the hospital, their cat has kittens, a steamroller comes through their living room etc(!)
If you are absolutely SURE You have been ripped off, then list them on the RIP-OFF / BAD DEALS page at:

http://www.fraud.org/

or:

http://204.27.195.150/cgi-shl/classfd.exe/D|FRAUD|QTH.COM
Something is wrong with that, but it may be something similar!
Try removing more and more bits from the right end!

Doesn't work - oh well... I thought SOMEONE at one time had a web page JUST for reporting swindles in ham radio trading!

# 2780. Need 1st IF module for AN/SRR-11 receiver

Newsgroup: rec.radio.amateur.boatanchors

Like the title says.

So far have come up with several folks with the receiver,
but lots of receivers without the module.

If you have parts, I just need one of the switches from the
module. A very nonstandard switch, I'm afraid.

A whole module would be even better.

TIA

The following is posted for a friend without internet access. PLEASE CONTACT NIGEL DIRECTLY...thanks!
==========
==========

The following Racal communications equipment for sale:

MA 168 Diversity Unit (no manual) $100

TA99 1 KW Linear (no power supply), 1.5 to 25 MHz, with Distortion Unit and VSWR unit, with all technical manuals. $700

TA349C 1 KW Linear, 1.5 to 30 MHz, servo tuned, with power unit, all interconnecting cables, set of technical manuals. $1600

The following three Racal transmitters are extremely rare. As regards prices, I am open to cash offers:

(1) Racal TA127 Transmitter (Royal Navy Type 632S). 1 KW, 1.5 to 25 MHz. All in very good to mint condition, in working order, original cabinet and wiring, with set of technical manuals and many spares.

(2) Racal TA83 H.F. Transmitter, 500W, in UN-USED condition with all Racal supplied tools, technical manual.

(3) Racal TTA371C Transmitting Terminal (Ex-RAF). 1 KW, 1.5 to 30 MHz. All in very good to mint condition, in working order, original cabinet and wiring, with set of technical manuals and many spares.

All items can be packed and shipped at cost from Georgia.

# 2792. Very Special HW-101 on eBay

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-02-21 00:00:00 UTC
From: k2ok@ntr.net
Message-ID: <6cn7te$kjd@camel15.mindspring.com>
Source record: 109632

This is a very special Heathkit HW-101. It is in excellent physical condition, but what makes it special is its electrical condition. It was completely refurbished by "one of the Hams at Heathkit" (WA1LJY/8)in June of 1997. He went thru the rig and installed all the latest Heath mods, fixed a few wiring errors, replaced the "Phono" Antenna connector with a SO-239, re-capped the Power supply, and performed a complete alignment to bring it up to original specs. Receiver sensitivity is 0.2 uV for 10 db. 50 uV = S-9. Transmitter power output is 100 watts. It comes with the 400 Hz. CW Filter, the HP-23-A Power supply (also refurbished) and original manual for the HW-101 . Sorry but I do not have a manual for the power supply. There are lots of $150.00 HW-101's out there but you won't find one like this for anywhere near those prices. This rig is for serious lovers of the "Hot Water 101".

Check it out at:

>http://iguana.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=6681186

The AR-3 is a hf receiver that was introduced by Heath in 1956. The five tube radio covered 500 kc to 30 mc in 4 bands. List price for the AR-3 was $29.95(Dec 1955) and the cabinet was $4.95 more. It was advertised a "ideal for the short wave listener or beginning amateur". I had one given to me when I was a novice. It was adequate at best but it served me until I got my HR-10.

>PHONE line, and to dispense with that archic part of the link
>altogther. So I am not the only one who thinks the modem phone link is
>a bad idea.

Then try getting B.T. and the other telecomms sharks
to make ISDN more attractive to you and me, for a
start. You might also suggest to the authorities that
some of these bloody amateurs be moved out of the
VHF/UHF/SHF spectrum they occupy* to make way for the
sort of free, high-speed Internet access you crave.

* ...or don't occupy, depending on your line of sight.

What I'm curious about is what the UK third-party traffic rules have to say about this. This sort of use is clearly beyond the scope of "transmissions of a technical nature whose importance does not justify the use of the public telecommunications infrastructure" (paraphrase of the Canadian regulations). What you propose would certainly be illegal in Canada.

>
> Wonki, WM2X...

The receive formula is Fo-11.2/9 or Operating frequency
minus 11.2 Mhz divided by 9.

The transmit formula is Fo/12 or operating frequency
divided by 12.

This applies to models with frequency range digits of 55 or 66
in the combination number.

>Packet radio interface.

First, all the packet gateways I know about are Amateur Radio packet
gateways, so to gain access, you will need an Amateur Radio license.
Second, not all the traffic carried on the Internet is permissible under
an Amateur Radio license in many countries, including, I think, the UK.

A group of BC Amateurs has designed and built a 56 K radio/modem currently
used to connect a number of sites together, including a link to the
Internet. I understand they're presently designing a new one that will
basically have two connections plus power - an ethernet connector and an
antenna connection.

They're presently using the 430-440 MHz band with about 85-100 KHz
bandwidth, although the goal down the road is to go up in frequency to

just under 6 GHz so that the bandwidth for a T1 connection will be available.

So, in conclusion, if I were you, I'd find a knowledgable person at the RSGB who can tell you what is possible under UK rules. They would also be able to steer you to active packet people in the UK.

Hi, "newbie" --

It sounds like you may be new to the "newsgroup thing," and aren't yet conversant with the subject of spambots. Spambots are automated newsgroup posters which place messages such as the ones you've replied to on literally tens of thousands of newsgroups, without any intervention or supervision from the people responsible for the spam.

Replying to spam messages in newsgroups does nothing but compound the waste of bandwidth and server space caused by the spam in the first place. The originators of the spam do not look in the thousands of individual newsgroups for any replies to their spam, and will thus never see your indignant reply... but the rest of us have no choice.

Further, many of us use news servers such as Super Zippo (http://www.zippo.com) which implement automatic spam filtering based on a wide variety of criteria. The idea to keep messages with subject lines or contents like "MAKE MONEY FA$T", and so on from ever appearing in their customers' view of the newsgroups. This technology works very well, and is a major selling point for the news services that offer it. Unfortunately, when someone like yourself replies to a spam post that is visible on *your* news server, your reply has the effect of making the spam visible to the rest of us for the first time -- effectively generating spam we otherwise would never have seen in the first place. This happens because many of the common spam filters don't reject replies, only original messages.

So in short, please knock off the replies to spammers. Your audience for such replies is limited to everybody in the world *except* the spammers themselves, and believe me, everybody else already agrees with you.

# 2819. FS: NOS 4-400A equivalent

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-02-22 00:00:00 UTC
From: Dave Heil <k8mn@clinet.fi>
Message-ID: <34F0FEA7.146A@clinet.fi>
Source record: 109550

For sale: New, old stock Philips direct equivalent to the Eimac 4-400A transmitting tube. These work fine in homebrew amps (grounded grid as well as the tetrode configuration), the Johnson Viking 500, Globe Kings, KW-1, Heath Chippawa and others.

$75 each, postpaid

Dave Heil OH2/K8MN

If you want to lease a T1, ISDN or such, yes. However, in California, I pay Pacific Bell $16 a month for my line. That includes unlimited free local calling. Any LD charges are done through any choice of carriers, such as MCI, ATT, Sprint, etc. We choose our own LD carrier, and now it is commonplace to choose your own local carrier. Rates are extremetly competitive.

However, for home-telephone service, US$16 a month is not a bad deal, especially considering I racked up 110 hours of internet connect time last month.

> There is no such thing as a free lunch.

True, but our phone service here is close to it. Rates for business/commercial on the other hand are priced very differently.

Having problems with a Hallicrafters HT37. Seems that as the transmit
frequency increases, power output decreases (e.g. 100W @ 80m, 60W @ 40m,
20W @ 10m). If you have any information that might help solve or shed a
bit of light on this problem, please email Don at dem@sal.wisc.edu

That won't work, Tim, because, in the algebraic Order of Operations,
division is performed prior to subtraction. What you've actually
written is: Fo - 1.2444. The correct formula is:

(Fo - 11.2) / 9

(parenthesis override the normal order of operations).

All D models have the AM broadcast band coverage. All LF models do not.
Diversity capability on the AR88 was very simple. Just hook up two
receivers and run the agc from each to the other. The one with the best
signel would turn down the other. It worked but it was nowhere as
sophisticated as other means of diversity reception and could have been
done with most any two identicle receivers.

It's already happening... the 47GHz part of the spectrum, later this
year, may see the first evidence of this. The amateur band up there is
in real danger if the commercial people "run out of space"...

# 2836. Info Needed on Yeasu BA

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-02-22 00:00:00 UTC
From: Daniel Langston <danman@accucomm.net>
Message-ID: <34F1048D.59C@accucomm.net>
Source record: 109567

Has anyone on this NG had any experience repairing the Yeasu FTDX 560? I've got one with a different set of local oscillator crystals than what the schematic calls for..The crystals range anywhere from 300 Khz to 700 Khz higher than the schematic shows..

The crystals are hard wired to the first bandswitch wafer at the VFO end of the rig and would take a lot of work to dismantle the bandswitch to change them. I was wondering if the '560 was intended for other amateur markets, or might there have been a change of the oscillator ouptut to a frequency higher than the design frequency of 5720 Khz?

Anybody with a suggestion or idea?

From: Bob Nickels <ranickel@mwci.net>
Message-ID: <6cq567$eeb$1@hihat.mwci.net>
Source record: 109571

Also...

Make sure the bias is set right, if mis-adjusted you can cut the finals completely off. Another problem I've had is with weak tubes in the balanced modulator and a bad connection at the RCA plug that carries the 9 Mhz signal from the sideband module to the main chassis.

Good luck!

73, Bob W9RAN

Hello:

Anyone out there have a manual for a Trio o'scope
model CO-1303G?

Will pay for whatever you have, either original or
good copies (even a copy of an old ad for the thing).

Thanks de John

# 2851. HQ-129-X

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-02-22 00:00:00 UTC
From: Ben Wallace <bwallace@sd.cts.com>
Message-ID: <01bd3f2d$ffa4a3a0$3506a3cd@bwallace.cts.com>
Source record: 109654

I recently obtained a very nice HQ-129-X.

It works great. However, I have a module in the left hand rear of the receiver (looking from the front). The module does not have a tube. It looks like a xtal calibrator. It has a plug-in crystal, an adjustment but no tube.

My questions are:

What tube (7-Pin) is used for this calibrator?

How is the calibrator activated -- I see no switch.

Thanks,

Ben Wallace

Source record: 109661

Hello all:

I'm a newcomer to Boat anchors, and have just obtained a Ranger 1. I'm assuming that it would be prudent to replace all of the wax-coated paper caps, and that replacements would be available from Antique Radio Supply.

The power plug, however, is something that is new to me. It is crumbling and needs to be replaced, although the fuses appear to be good. Can anyone tell me where these plugs can be found?

Thank you!.

73, de Mike, K9UW

# 2868. FS: 6LF6 NOS Tubes, Octal Ceramic Sockets (Amphenol)

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-02-22 00:00:00 UTC
From: MLJS45A@prodigy.com
Message-ID: <6cpc32$3pig$1@newssvr04-int.news.prodigy.com>
Source record: 109671

I just finished cleaning up a supply of new Amphenol ceramic octal sockets. These are bottom mount, require a 1&3/16" mounting hole. These can be mounted with a snap ring or with the (included) mounting plate. Mounting screw centers are 1.625". Most I have are silver plated, a few are not. These are very high quality sockets, corrosion free and ready to go. I'd like $3.50 ea. or 4/$13.00 for the plated, $2.50 each for non plated (plus shipping).

I also have (2) 6LF6s left, one GE, one Sylvania, both NOS in the original boxes. $28.00 ea. (plus shipping).

Please e-mail me if interested. Thanks!

Jim McShane

# 2869. WHAT DOES AN R-390 TASTE LIKE (pse don't laugh!)

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-02-22 00:00:00 UTC
From: radiomatt@aol.com
Message-ID: <19980222142801.JAA15689@ladder02.news.aol.com>
Source record: 109672

In the Reader's Digest book FACTS AND FALLACIES (on page 231), there's a story, presented as fact (i.e. not pooh-pooed), that a Grenoble resident (France) named Michel Lotito can eat various metal products. He shown eating a TV set (with tubes!, er.... valves), and it is claimed he ate a Cessna 150 in its entirety.

Now TV sets and airplanes are made of sheet metal. Could he devour a R-390, which is more sturdily built?

It is said his stomach juices are unusually strong, and the lining of his stomach is double-thick, but Reader's Digest seems to believe this shtick.

So, could he or someone eat a R-390 (or 390A ?). How about an R-725?, or a R-389URR? Does the S-Line series taste better?

Now, my wife once suggested (hm!) that I process a 390 in the other direction, but that doesn't count.

Could we pay this guy to eat a 390? Just to see what happens?

Hi All--

I just picked up a Dummy Load model DA 75 A/U built by RA-NAV . . . any one know or have a spec sheet? It looks like 1000 Watts . . . I'd also like to know what the coolant/dielectric fluid may be.

73,

John, WA2GIE

From: acomarow@aol.com
Message-ID: <19980222172000.MAA09402@ladder02.news.aol.com>
Source record: 109683

>The power plug, however, is something that is new to me. It is crumbling
>and needs to be replaced, although the fuses appear to be good. Can anyone
>tell me where these plugs can be found?
>
>Thank you!.
>
>73, de Mike, K9UW

Mike, I'd *strongly* advise dumping the fused plug and two-wire cord, and instead use a three-wire grounded power cord and put a fuse inside the Ranger. Under the wrong conditions, even a fuse in both sides of the line won't prevent a shock hazard. That's why you don't see fused plugs any more.

Best, Avery W4OGK (Ranger I and II owner)

Yes, I agree. Is there a moderator on this NG?
If not, to whom can we go to get this type of garbage removed/filtered from the NG?

# 2885. * For Sale List With Pictures

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-02-22 00:00:00 UTC
From: Bill <bill@halcyon.com>
Message-ID: <01bd3fbd$27cda7c0$0a203fce@bill.halcyon.com>
Source record: 109688

I am selling some of the items I am no longer using. Each item on the list below has a hot link to a picture or pictures of the item. You will have to use the back button on your browser to get back to this message.

My terms of sale are as follows:
I will not ship outside the US.
Payment should be by cashiers check or money order.
Buyer pays shipping and insurance.

You can view my high integrity rating on eBay.

You may contact me by email at bill@halcyon.com

Here are the items!

Index Laboratories QRP Plus

160-10 meter CW/SSB transceiver. This is the latest (last) version they sold. It has never been used in the field and has been used very little in my ham shack. It has a built in keyer and audio filter.

This rig runs some of the best full break-in CW I have ever found. It has a general coverage receiver.

It will come in its original box.

This is the best QRP rig ever made. The original cost was $695.00.

There is a brochure included. The manual is also there.

http://www.halcyon.com/pub/users/bill/qrp-fnt.jpg

Sale price is $525.00

MM-3 Keyer

This is one of the famous keyers from AEA. These are now collector's items. AEA has not sold them for about 3 years now. There won't be any more of these!

The keyer has more features than any I have ever used, memory, contest mode, contest simulator, serial number, paddle reverse, and much more. I have included a picture of the label on the front of the keyer that has a list of all of the functions. The keyer comes with a manual.

The link to the function label is below:

http://www.halcyon.com/pub/users/bill/mm3-lab.jpg

The front of the keyer can be viewed at:

http://www.halcyon.com/pub/users/bill/mm3-fnt.jpg

The rear of the keyer can be viewed at:

http://www.halcyon.com/pub/users/bill/mm3-rear.jpg

Sale price is $165.00

Gold Plated Hand Key?

This key was made by Wm. M. Nye Co. It is new in the box. It is one of the best looking hand keys I have ever seen. It is gold plated (see below) and has a black crinkle base.

Very few of these keys were made. This one was made for Icom to be used as a presentation item.

It has a great feel and is very smooth.

You will be proud to have this key in your shack.

I sold this key a few weeks ago and the person who purchased it did not think the key was gold plated. He felt it was polished brass. I accepted its return. I was an Icom employee and was told, when I was given the key, that it was gold plated. I can not be sure. I do not know how to tell if it is gold plate or polished brass. This time I will sell it and not represent it as positively being gold plate. I do know it looks great!

$55

Own a W2FMI Original!

Dr. Jerry Sevick, W2FMI, in his years of research has wound over 1000 BALUN and UNUN transformers and has used over 1 mile of wire over a 20 year period. The results of his sensational work are the powerful 2kW to 10kW, 98% efficient 1 MHz to 50MHz BALUNs and UNUNs. This work is featured in over 20 articles, 3 books and the ByteMark website.

Another result of this work is hundreds of wound BALUN and UNUN transformers that Dr. Sevick would like to liquidate. For a limited time, you can get a hand-made BALUN or UNUN transformer, built by Dr. Sevick himself. These carefully crafted transformers were constructed for testing and study purposes during the course of Dr. Sevicks investigation into the theory and practical applications of Transmission Line Transformers.

Each transformer comes with a detailed description of its design, what it would be used for and how it was constructed. The unit will be accompanied by a certificate noting its authenticity, signed by Dr. Sevick.

These transformers are available for $30 (plus postage) until they are gone. We cannot honor requests for specific designs, units will be shipped on a first-come first-served basis.

Don't miss out on this historic opportunity! Be one of the first to have a W2FMI Original BALUN or UNUN in your collection. Email w2fmi@bytemark.com to reserve your unit today!

Or, Place your order on our Secure Server using you MasterCard, EuroCard, Visa, Discover, Novus or American Express. Note the part number as "W2FMI-CC" and the description as "Collectors BALUN." Shipping is over two but under five pounds.

The best person to go to is yourself. Use a good threaded newsreader with
a regular expression filter capability and you won't see this sort of thing. A
good newsreader allows you to customize what you see so that *you*
determine what you get from a newsgroup, or collection of newsgroups.
Rather than depending on someone else to be your nanny, you can make
your own choices. Freedom, what a concept!

You're welcome.

Cathodeon did some excellent notes on crystal parameters etc. I still use them as the best reference in this area. I've still got one of those typical parameter calculating cardboard "sliderules". Someone mutilated, um, sorry, "converted" our Cathodeon PI-network test adaptor for use with a 1-port Z measurement and I had to buy a replacement when I next needed some serious measurements done and discovered that its innards had been ripped out. From a customer's viewpoint, one of the best crystal companies just vanished without any form of explanation. SEI have shut down as well, now, so the quartz industry isn't what it used to be, I suppose.

Cheers
David GM4ZNX

From: trinit69@idt.net.nospam
Message-ID: <trinit69-2302980710560001@ip183.lafayette.la.pub-ip.psi.net>
Source record: 109501

The tags are $9 ea, $16 for two, or $35 for five, and come with screws and washers.

I had a bunch of repro tags made up for the guys who got rigs with no tags at all.

To avoid confusion with the originals, the tags are made with a unique, factual, but generic design. I had them made by a nameplate company in Mass. The fit and finish are just like orig of this size.

The repro R-390A tags are 1" x 2.5" etched aluminum, and they read this:

RECEIVER, RADIO R-390A/URR <== this type is larger

DESIGNED BY COLLINS RADIO COMPANY
CEDAR RAPIDS, IOWA
FOR SIGNAL CORPS, U.S. ARMY
NSN 5820-00-538-7555 <== this type is larger

115/230 VAC 48-62~ 220W

Sorry, but the only tags I have are for 390A.

Reply here for a JPEG.

For Sale:

I am selling this for a friend who does not have
internet access.

Yaesu FTdx-401 transceiver. Good physical condition,
face is nice. With matching speaker. Seems to be
all there, but is untested and sold as-is. It has
been on a shelf for many years.

I can email a jpeg photo.

lower price $205 includes shipping to lower 48 US. Prepaid
by USPS money order. Sorry, but no COD's.

Many thanks. Take care.

Dave nyet@juno.com

Works the other way too, manufacturers of metal deposition eg sputtering
equipment use (or used) the change in frequency of a sacrificial crystal
as a thickness monitor.

The following is for sale. Add UPS shipping charges from 48092:

HEATHKIT SA-1480

Remote Coax Switch (Control Box ONLY- The outdoor unit has disappeared). Original Heath manual included. $35.00.

RME SPEECH CLIPPER

Fair condition • couple of holes on top of enclosure. Front panel and knobs nice. 110v line cord needs replacing. Untested. $30.00.

TURNER 454C DESK MIC

Desk mic with PTT bar and lock lever. .25• plug attached. $35.00

FILAMENT TRANSFORMERS

The two 22 amp transformers below use glass insulators for the output terminals and have a working voltage rating of 20,800 volts!

Transformer Weight Price (appx)

5V @ 22 Amps 26 $20.00
5V @ 22 Amps 26 $20.00
Dual Winding:
5.1V @ 43 Amps
5.1 @ 14.5A 32 $30.00

EIMAC SK-516 CHIMNEY - $25.00

HEATHKIT HD-15 SWR BRIDGE

Works, but plastic meter cover missing. Other than that, cosmetically ok. $15.00

HEATHKIT S-3 ELECTRONIC SWITCH

Excellent condition. Includes original manual. $10.

TEN-TEC ﷺBANANNAﷺ DESK MIC

Made for Ten-tec by Electr-Voice. Ceramic element, ptt switch. Itﷺs the microphone that looks a little like a bananna (handheld part) and has a heavy metal base for desk use. I think it the EV 927-SC or something like that. $35.00

(In my opinion)Currently the best crystal formulae and application notes
are issued by Telequarz in Ger. Their agents in the UK are Webster
electronics.
The only large crystal manufacturer in the UK now is C-Mac in Harlow
Essex who are offering a quick small quantity service (dont know how
much it costs )
Douglas Dwyer Frequency Precision Ltd.

# 2911. WTB or TRADE for socket (HELP!)

I need a 12 pin socket to fit a chassis-mounted 6T9 Compactron.

Could get by with one designed to mount on a PC board in a pinch.

Will buy or maybe trade.

Project is in a ditch til I find one. Also a spare 6T9 wouldn't hurt.

Thanks

Dave
I was just wondering why I wrote those series of AAA, because today I
really could not find the reason, now I remember (tnx Joe) it was
because the click led me nowhere, your posting was not the first of
somebody asking to go some inexistant place.

Sorry, that behaviour is not usual on me.

This is to advise any interested parties in this to be sure you have a firm deal, he has had this on the market twice before, the first time he agreed to meet me at midpoint between our two homes and then changed his mind. The next time he put it up for sale I said I would come and get it and then he stated he had already sold it to a friend. Maybe he just does not want to do business with me which is his right. This is FYI.

Dear Kurt,

The reason I did not want to do business with you was because you could not understand that it was PICK UP ONLY even though it was clearly stated in the ad. And I tried explaining that to you when we spoke on the phone. But you still insisted on trying to get me to drive up the turnpike to meet you! So I concluded you were not really serious, but just window shopping. But thats OK, no problem.

Dear Dr. :

Let me see if I've got this straight? The first time you listed the radio for sale this guy called you and made arraignments to meet you half way but "maybe" something got lost in the translation and you thought he was "window shopping" so you blew him off. The second time you listed it he now agreed to come down to your place to pick it up but you told him that you had sold it to a "friend". Are you saying that you "concluded" that he was still window shopping the second time or did you "really" sell it to a friend, if so I'm confused as to how you are now trying to peddle this a third time when your "friend" is supposed to have purchased it?

I "MUST" keep my scorecard up to date now!

## 2928. FS:HQ145A

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-02-23 00:00:00 UTC
From: Randy Cook <crcook@worldnet.att.net>
Message-ID: <6cthtq$hsn@bgtnsc01.worldnet.att.net>
Source record: 109533

Hammarlund general coverage, circ 1964
Has working clock, case in very good condition
Front panel fair, no scratches or damage
Knobs all there
New tubes (except 12AX7, which tests fine)
Very weak on band three (4-10 mhz),
Dont know what is wrong, haven't dug into it, as it is primarily used for AM radio in the shop
With NOS original manual, copy of brochure

$100 + UPS or reasonable offer

>>73 de G3NYY

Hey, lighten up, guys. In England, they have to pay for EVERY phone call,
even local ones and what we take for granted is quite expensive. All he
wants to do is get to the same place as those of us in North America.

I am looking for quantities of FT-243 Crystals.....Both HF freqs
and 2 meter Freqs. Have Several HF Boatanchors, and a Clegg 2 Mtr AM
Rig that require these Crystals to get on the air....

Please email me direct at... radiorob@serix.com if you have any
for sale.

Regards...ROB.

# 2940. Re: Help with HT-37 problems....

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-02-23 00:00:00 UTC
From: gfbike <gfbike@millcomm.com>
Message-ID: <34F0DC00.7C65@millcomm.com>
Source record: 109584

Most likely the entire transmitter is short on drive somewhere. Transmitters, particularly older one, tend to drop off in efficiency as the frequency goes up. This usually is not a problem since most rigs are over designed in this respect so as to provide enough output over the entire range. When a defective stage somewhere in the radio fails to give sufficient drive, the overall output behaves as you describe.

Check all the tubes first.

Then try a new pair of 6146's as these lose gain too as they weaken.

Good liuk and don't hesitate to ask for more assistance.

Gary

Just added to my clocks and clock radio pages a link to the Naval Observatory
to read out the current universal time (UTC, zulu, Greenwich, GMT) when you
start to load these pages:

http://www.geocities.com/CapeCanaveral/9178/radios/cr.html
http://www.netcom.com/~wa2ise/radios/clocks.html

So, if you're
away from your WWV receiver, you can find out the time.

I believe that C-Mac (now privately owned by a Canadian and one time
STC / ITT crystals Harlow) has taken over the employees and product line
that was previously SEI and have rehoused in a new purpose built factory
the C-Mac are now offering quick small quantity supplies from this new
site.

Hi - I am looking for the schematic or any additional
information about the P & H Electronics LA-400C
Linear amplifier. ( From approximately 1961 )

Has anyone tried modifying one of these for any different tubes?
I am going to install a power transformer that could be either
630-0-630V for the 1625 or possibly a 900-0-900 transformer
if I went to 811A bottles.

Mine is missing the 816 rectifier bottles, and it has some 837
tubes installed. I am going to switch to some other tube such as
1625 or 807, but wondered if 811As could work too.

I will probably go to silicon rectifiers, so COULD even switch to 6
output bottles (1625) but that might look ugly and require a larger
heater transformer.... ah the ossibilities!

I would like to get a photocopy of the schematic and of course
will gladly pay copying/postage charges.

Please reply here and via e-mail but DROP the
'NOSPAM' from my e-mail address. It is there to fool the
annoying bulk e-mail criminals.

FS:

Multi-EImac A54H mobile xmtr. From estate. Not checked, looks complete. Late 40's early 50's era. Has built in VFO as well as FT243 style ceramic xtal socket on front. Classic rig. MIcrophone is heavy, cast metal body, traditional tear drop mobile mic shape. Controlled reluctance, high impedance. Transmitter looks fine as it is and might be more valuable this way than tampered with; microphone body needs new coat of gray wrinkle. I do not have the receiver but many hams used converters during those days on their BC set, so will still look very natural under the dash of your antique car if you have plenty of leg room. Lunch box size about 12" wide by 6" tall. $125 plus shipping from 70806. (Combined package weight about 40 - 45 lbs). Or will trade for used multimode plus the shipping on this.

During about 10 years have lost money with the Radio
the emissions were all cultural.
In SPAIN do not have COMPANY FREEDOM and by so many can not mount A commercial
network by administrative and bureaucratic problems.
This is due to the fact that to obtain a frequency one must go through a
contest I publish And here it is when appear The problems.
The speculators, those which do business without having interest in the radio
emissions, alone want the grant for power to sell it, even to coast of bidding
farewell to all The insole of a network that operate well, it is preferable
that all controlled este by the large chains and thus to remove the natural
right to the FREE EXPRESSION and COMPANY FREEDOM.
It is easier to control to a chain than hundred Independent radio, the radio
networks Are considered but a form of washing the brains that a form of social
expression.
In this country to nobody is pursued to himher you by their its political
ideas, is not given to himheryou frequency And is remained without issuing
in radio, without work and if protests put you a fine of 67.000 $dollars And
if do not pay to the jail, that if this is a democracy and all is going well,
very well.
So that then they arrive to you the rumors of the fact that before of the
contest publishes, the frequencies already it Has been given and to the
friends of always, if this finally is going to seem a republic ++Bananera.
We have lost the @@expensa of reissuing in a way commercial and power to live
of our Work, hard work and not always well-paid, but we are some professionals
of the radio And we do not know to make nothing but, alone radio and
television, but finishes esta is worse still.
We are professional of the communication cloral and our goal is the prompt
breach.
During the radio emission of makes some months a key beam on the repeater of
the destruction network our unit of power, to prescribe it of the liaison
and the antenna of the same, remained destroyed,
The cost of the nevosa equipment is superior to 8.000 dollars.
We do not have money for power to pay the new equipment and we leave with 38

courtyards in cute Forcing to the network so that this, draw all what could, with noises provoked by The regulation upon having the issuer to less of 5 meters of the audio equipment.
Please if you can help us sends us at least 10 dollars, if not the commissions
of the Banks is quedarian with all money and not us llegaria given, if you are many Could buy a new issuing of radio in fm (88 - 108 mhz) commercial band.
Not pens&#65533;is that we want to earn money, with this proposal, we would prefer an equipment such as the one which were having before, compound by
Codificador st&#65533;reo
Commercial issuer of 30 watts commercial band 88 - 108 @@mhz power Unit of 1000 watts
Liaison unit (network and receiving) commercial band 890 @@mhz 4 dipolos of vertical polarization - horizontal with 8 db of profit.
That we can offer you, few thing but if someone wants that theirits your his maqueta, theirits your his disk Theirits your his cultural association, to spread some ideas, theirits your his form of thinking make known some movement, cultural trend ect as long as this ideas will be LEGAL, we can help you we.
We have opened I number an of account in a bank, where be able to do The income, almost that it will be will be well received.
If @@disponeis of radio equipment, much better
They are accepted from 10 dollars (recommended at least 15 or 20), we need 8.000 @@dolares or a new equipment.

## 2971. Carbon composition resistors

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-02-24 00:00:00 UTC
From: dgf@netcom.com
Message-ID: <dgfEowHEK.F0x@netcom.com>
Source record: 109465

I've encountered a spot where I need to find a source for medium power carbon composition resistors. In a nutshell, I've picked up the Hallicrafters HA2/HA6 vhf transverter setup, and they way it takes exciter power is through a 50 ohm terminator/pad internal to each of the two transverters. I want to alter them slightly so I can hook the exciter (10M) up to both transverters concurrently, and I also need to adjust the circuit slightly to accomodate the power level I have from the driver (I have 5 watts; the units presently can take either 1/2 or 25 watts). It seems the easiest way will be to cobble up the necessary pads and such using 2 watt carbon-comp resistors, but I gather those aren't sold much anymore.

Therefore, what do people do nowadays that need parts like this?

73 Dave WB0GAZ dgf@netcom.com

God gave you a free will, and the "democracy" you complain about not having is, in fact, exactly what you do have and is persecuting you. Why haven't you simply moved to another country? You could qualify for a station license with hard work and only the usual amount of beauraucatic politics, and wouldn't have to look for handouts to have a voice.

*** Mailing List *** UK-Vintage-Radio

The mailing list UK-Vintage-Radio is designed to promote the
interchange of information between collectors of (mainly) British
broadcast and communications radio sets.
It is meant to complement, rather than compete, with other
lists/Newsgroups of a similar nature.

Topics for discussion:-

* Collecting, refurbishing, storing.
* Sources of materials and components.
* Technical queries and discussions.
* Wanted & For-Sale.
* News of forthcoming events.
* Service information.
* Books and Publications.
* Societies, Museums info.
* W.H.Y.

TO SUBSCRIBE to the mailing list,

Email: uk-vintage-radio-request@webaware.co.uk

include 'subscribe' in the main body of text.

It is hoped that this facility will be of use to those who collect and

refurbish old radio sets, be they broadcast, ham, or military.

The list will be as strong as its contributors, so please feel free to

subscribe. It is hoped that it will provide a vehicle for sourcing
service information, manuals, and spares, also a good place for
technical discussion, hints and tips, buying and selling, etc.
Best of all, it's FREE!

Source record: 109472

Wasn't that about the same period as the HT-44 / SX-117
and the SR-150, or SR-400 series of rigs?

You might look in some of the QSTs from the early 1960s.

Just about everything's illegal in Canada.

I've been led to believe that, provided all the traffic
passed over any (theoretical) Internet/Amateur Radio
interface is originated by and destined for licenced
Radio Amateurs, then such an interface would not
be illegal.

Then should it happen that BT is so ill advised as to
drop local call charges, I hope the ISPs do introduce
connect-time charges.

Actually, there is argument for completely flat rates at the national
level for telecommunications - i.e. no toll charges for long distance at
all both in Europe and America.

I find it difficult to understand your hostility to flat rate local calls,
though. What is your basic objection?

It seems to work just fine in North America.

2. New Amphenol 2 pin mike connector pairs, cable end and chassis mount pair with all set screws, mounting net and washer and strain relief spring. This is the mike connector with offset pins as used on Johnson, Heath and other ham gear from yesteryear. $10 for a mating pair, post paid first class conus.

BTW these items are also available from Allied and Newark under a different brand and if you can deal with the minimum purchases you may want to investigate these sources as well.

Source record: 109346

Hi Mate,
Well for the radio amateur market I would say 12 bux for any 12AU7
was an excellent return for your 12AU7s. You might probe around on the
rec.audio.tubes for price information as the Tube Audio dudes are much
more willing to pay the Big Bux for tubes. I believe the real hot
Telefunken tube among the audiophiles is the 12AT7 and of course 12AX7s
American or British are usually hot items. Not sure that the 12AU7 is a
biggee though.

Good luck on the venture,
Bob,KE6F

Hi Tony,
There is an email list devoted to Heath gear - subscribing to it
might prove very helpful to you. Send an email to:

listserv@listserv.tempe.gov

and only write:

subscribe heath

and you'll (almost) be hooked up; you'll receive a message asking
you to confirm that you really want to be subscribed (follow the
directions). Also, please keep the Welcome message you'll receive;
it will contain the directions for unsubscribing if you ever desire
to leave.

73 from Hawaii,
Jeff KH2PZ

# 3007. Re: P & H Electronics LA-400C

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-02-25 00:00:00 UTC
From: n2ey@aol.com
Message-ID: <19980225030300.WAA28644@ladder03.news.aol.com>
Source record: 109395

Hello Bry,

The P & H LA-400 was originally described in QST for June 1955 under the title "A 200-Watt Grounded Grid Linear Amplifier" by R.L. Peck, W9MOW, and E.L.Hoover, W9SAR. (One guess what "P & H" stands for!). It used four modified 1625s as zero bias G-G triodes, with direct drive to the cathodes, and a pair of 816 rectifiers. I don't know how closely the manufactured unit follows the article, but the pictures in the article closely match the ads that appeared about a year later.

Two items of interest about this unit:

You can't just plug in 807's or 1625's - the tubes have to be modified. The trouble is that the 807 and 1625 have the beam forming plates connected to the cathode, which messes up the grounded grid circuit. In some brands of tube, this connection is inside the bottle, but in others, separate wires to the cathode and beam forming plates are brought out and then connected together at the base pin. P & H solved this problem by removing the tube bases, separating the wires, and installing new 6 pin bases. A lot of delicate work, yes, but with surplus 1625s selling at 19 cents each in quantities of ten or so, it was worth while! 837s have separate pins for the cathode and beam forming plates, so no mod is needed.

There isn't a blocking capacitor in the drive circuit, so be sure to add one unless the rig driving the amp can tolerate several hundred mils of DC.

Modifying one for 811s should be pretty easy - but you'll need a filament choke.

I can copy the article if you need it. Just send a large SASE to my Callbook or QRZ address.

FYI

Just as matter of record, Zarkoff, you have twisted the facts on this matter and Tom's score card is correct, you have listed it three times for sale and I offered to buy it the first two times. I told you the first time I would have cash in hand at the asking price and asked if you would meet half way and you agreed to, and then changed your mind with out even ever telling me.
You just did not respond to my messages to finalize the arrangment. After finally getting a hold of you, you informed me had decided to sell it to someone that would pick it up and were about to do so. I then told you that had you told me that you did not want to meet me after agreeing to have tried to come and pick it up. You never gave me that option.

You then listed it again a month or so later and I called you again and you immediately said you decided to sell it to a friend so it was not on the market.ï¿½ At that time I told you if your friend decided not to buy it I would come and get it.ï¿½

If you think I was window shopping, wrong, I bought another one for my friend and off a listing on rec. radio swap and can give you the name if you want to verify it.

I was trying to deal with you in good faith, not so with you.ï¿½ The fact that you still have it tells me you never sold it to your friend or anyone the last time you had it up for sale.ï¿½You have now told me you have sold it on two occassions. I also noted you are not rating the unit as high as you did on your first listing?

I was not the problem in this situation it was you.ï¿½ The whole scenario with you on this was fishy to say the least. My ending comment is, buyer beware.

# 3013. Using 12BA7 pentagrid converters in place of 12BE6's, 3dB more signal gain

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-02-25 00:00:00 UTC
From: wa2ise@netcom.com
Message-ID: <wa2iseEox9px.D0H@netcom.com>
Source record: 109401
Cross-posted to: rec.antiques.radio+phono,rec.radio.amateur.boatanchors
Body handling: HTML body converted to readable text

The following is the test of a new web page,
http://www.geocities.com/CapeCanaveral/9178/radios/12ba7.html
which has pictures and diagrams.

Using the 12BA7 pentagrid converter to
replace the 12BE6 in AA5 radios
**3dB more gain, 2/3 the price at AES and a local Silicon Valley surplus shop**

The 12BA7 is a 9 pin pentagrid converter tube, similar to the
12BE6 in most respects except its conversion transconductance
is 950 umhos. That's about twice that of the 12BE6. This makes for
twice as much signal gain in a superhetrodyne radio, 3dB more (assuming
the AVC doesn't cut in). The plate resistance is about the same for
both. The 'BA7 has a pF or so more capacitence than the 'BE6, but that
will only affect the tuning of the upper end of the MW BC AM band.
And that can be tweaked out easily. And, important for a series
string heater system, the heater is identical.

I tested this mod on two AA5 AM tube radios, and had no problem
with unstable oscillations or tweats or birdies. And signal gain
went up in both cases.

I built an adaptor socket going from the
7 pin 12BE6 basing to the 12BA7 9 pin basing. This makes the radio
easily restorable back to the 12BE6 if desired. The following
cross-connections were done: (7 pin socket pin) to (9 pin socket pin(s)),
1 to 2; 2 to 3, 6; 3 to 4; 4 to 5; 5 to 9; 6 to 1, 8; 7 to 7.
This connects all the similar types of electrodes the same way as
in the orginal AA5 circuit. The 12BA7 has an extra function, an
internal shield (pin 8). I connected this to the B+ line, 7 pin socket pin 6,
as this line is at RF ground potential. It's just a small piece
of metal interspaced between the plate and grid 3 (the signal input)
leads inside the bottom of the tube.
So, the DC potential has no effect.

Now, time to test the mod. Be sure you have physical room for the
adaptor and 12BA7 next to the tuning cap (and you can tune),
and inside the radio
cabinet. The 12BA7 without adaptor is as tall as a 50C5. The low
end of the AM
MW broadcast band should tune as it did before. The high end of the
band may be off calibration something like 50KHz, the top (1600) now not
reachable. Tweak the tuning cap's oscillator section trimmer to
bring 1600 back again (backing the screw looser should do it). Once

you get the stations about where they belong on the dial, tweak up the antenna section trimmer of the tuning cap. Best tracking is usually had if you tweak up on a weak station near 1400KHz.

# 3014. Hammarlund HQ-100A Receiver *Clock* wanted

RIGHT while I have had the flue over the last few days and have not checked this little posting ( which is growing into a monster !!!! ) for a little while, I was amazed to see it has grown from my inital posting to 89 thus far!!!!!!!! Going from Internet access via Packet radio, somthing about govermnet should pay for everything, to TV, to Vehicles GAS etc etc etc HUH!!!!!! MAN!!!!!

OK well I found out what I wanted to find out, best help was from David TSE, and a link to force9 etc, i was able to find out that the technology IS available to actcheive FULL internet connection via Packet Radio. NOW wheather the HAM laws on Packet radio contents will allow internet access in England, and IF things might be changing ( loads thing changing in this country NEW labour ) new laws etc etc and wheather there is a line of site gateway from my location within say 60-100 miles of me, has all yet to be determined.

But my initial thoughts of wheather the technology exits has been answered YES IT IS. I Have found that it is Possible.

It may interest all who have responed to my initail posting that i
have found another way of connecting to the net which if is successful
will give me 120hours/month FULL internet access VIA ISP through a
MOBILE PHONE FOR JUST £32/month, which price also INCLUDES an ISP
monthly charge of £12...YES I KNOW BUT IT IS TRUE.

ITS not full free access but 120 hours FULL Internet access for £32
all in aint bad at all PLUS its legal.

So 89 Posting upto now....I wonder what the world record is on postings to a NewsNET posting is? Anyone know? Wanna Join this Fast growing Posting?

DO TRY AND KEEP IT TO DIFFERENT WAYS OF CONNECTING TO THE NET, USING ANY FORM OF TECH. RADIO, MICROWAVE, CABLE, TELEPHONE, SAT, ETC ETC ETC WHATEVER. IT MIGHT TURN INTO A USEFUL GUIDE YOU NEVER KNOW.

IF YOU CAN GATHER YOUR DATA AND POST ALL WILL BENEFIT, COULD BE GOOD THIS.WILL HAVE TO WAIT AND SEE.

DREAD TO THINK WHAT WILL HAPPEN AFTER THIS POSTING!!!!!!! hehehee

TO ALL

Cheers

IAN

Hi all,
I got a Meissner receiver (only name on the dial, no type), but did not find any receiver built by this manufacturer on the WEB.

This radio cover 150 kHz to 40 MHz in 5 bands, has a lot of octal tubes, a Xtal filter, BFO, AF-Ampl. with push-pull 6V6 and a magic eye, but no band-spread. The dial is rectangular. Metal cabinet. The BFO tube (6C5) is under the chassis!).

Has anyone of you information about receiver(s) made by Meissner?

Many thanks in advance and best regards

Meissner made many receivers in the 30's, your's sounds like the
"Custom 12" 1939-40 5 band, 12 tube with a tuning eye. MY reference
lists the freq coverage as .132-42 mc.
Nice receiver, BTW they were built in Mt. Carmel,IL
Regards, Craig

# 3030. Need Advice on FAIR MARKET price of new Telefunken 12AU7 Tubes?

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-02-25 00:00:00 UTC
From: l.mclaughlin@popmail.csuohio.edu
Message-ID: <6d1i78$8bf$2@csu-b.csuohio.edu>
Source record: 109418

Hi,

Can anyone advise me as to the fair market value/pricing for new old stock Telefunken Premium Diamond White Label "md" 12AU7 tubes? These test superbly with my calibrated TV-7D/U and Hickok and are the best balanced tubes I've seen in recent memory.

I just put up four for sale and sold them for $12 each to I guess a very happy fellow. Good luck to him--he paid the asking price, no problem there.

However, I have some more of these 12AU7's made in Western Germany and would like to get fair market value. You see I'm an old full time student and buy and sell items to finance my hobbies while I'm in school so I can keep wife off my back for toy expenditures until I get a real job again :-)

Any advice on fair market prices of these premium tubes would be appreciated, because I got a very good email response, so I know I drastically underpriced them. Again, no problem with the four I sold, but I'd like to do better with the rest.

Thank you for whatever advice on pricing you care to offer.

Lance a.k.a. Bostonian

This isn't North America. We don't _have_ to do everything
you Yanks do.

We don't have the capacity to support all the great unwashed
being on-line 24+ hours a day. I'd rather pay for local calls
(which are dirt cheap anyway) than suffer the problems caused
by under capacity at the telephone- and ISP-levels.

I could sell you all those boards but the coil cores are missing and
therefore they are worthless. Good luck on your search.

>I just put up four for sale and sold them for $12 each to I guess
a very happy fellow. Good luck to him--he paid the asking price,
no problem there.<

I find the above itself amazing; perhaps, if $ is your goal, you want to
leave here for rec.audio.tubes, where folks are happy to do these things
in a very different hobby. With a straight face and no intended wisecrak
whatsoever, I'd give up to $2 apiece for the purposes of keeping old
B/A's going for fun, not money. Again, no offense intended at all.
There is a reason, though, that many of us will totally avoid selling
tubes away from the radio/fun hobby at great profits and instead may
trade or give them away to each other, and it is not to keep our wife
happy while we go to school or to make sure our hobbies all show a
positive cashflow in Quicken. It also might be unethical for you to
expect this kind of treatment when you need an otherwise coveted tube
yourself, though I mean no rebuke to you in any way.

# 3064. FS: National RC-105 (mil HRO-MX)

Good evening folks...

I'm getting rid of my National RC-105, military HRO-MX with a complete set of coils (8) and coil box. Includes doghouse power supply.

I just finished putting a new Hammond power transformer in the doghouse. Doghouse has three wire power cord, inrush current limiter, and line fuse added in a completely easy to reverse mod (no holes added!)

This radio has been completely recapped and all new metal film resistors were installed at the same time. Radio has all new tubes and I'm throwing in a set of NOS spares to go with it.

It is a very hot rig thats works very well. Electronics are 9.5+ and cosmetics 8+ (no rust.)

Now for the bad news: I need to get something near what I have in it. I could sell the eight coil sets for $20-40 each by themselves. The radio is up for auction at e-bay.
http://iguana.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=6995077

More information and pictures are at e-bay also.

Dear Prospective Customers,

We are a newly formed company dealing with radio communications equipment for both commercial and amateur based in Kuala Lumpur, Malaysia. We are offering these equipments for sale at a very special discounted price due stock clearance. We are able to sell at a very competitive price due to purchasing them in large lots from Japan and due to cost of the products quoted in the local currency before.

All products are brand new and fully guaranteed. Eg. HF transceiver from ICOM (IC-706 MkII) is being offered at US$1120.00 (excluding freight) against the current price of US$1289.00 offered by other radio dealers in the US. Please allow 1 week delivery after clearance of checks. We accept checks in US funds only.

For quotes of all other products available and further queries, please e-mail to hamsupplies@trust-me.com or phone ++ 603 9439284 fax: ++ 603 2513775 attn: Farez . We will promptly entertain any of your queries.

Sincerely,

Megat Farez (Managing Director)

From: John Owen <johnowen@btinternet.com>
Message-ID: <01bd42a2$f9fa2f60$323763c3@default>
Source record: 109360

I would appreciate some Info:-

I've just picked up a Boonton 91H sensitive RF voltmeter, ex USAF in the UK,the unit works well on 50Hz with a transformer, I have a few questions which someone may be able to answer:-
1)What approx date is the unit, it was last calibrated in 1992, would the USAF have used a valve (tube) unit then?
2) The meter scale seems to be calibrated in dBV but the range selector shows 0dB on the 3 volt fsd scale - any ideas?
3) The DC amp has a "synchroverter", does anyone have any info on this, switching frequency/reliability/availability? (just in case!)
4) I would be grateful if anyone would send me details of the alignment pots along both bottom edges of the unit i.e. Function@ frequency etc

Many thanks
John

Well, I'm not exactly sure of that...I would think the core permeability
of different cores would significantly alter the inductance value of the
coils, such that you might or might not get them to resonate. I suppose
you could use a grid/dip oscillator to check them out. Would be
interested in seeing what others think about this.

# 3071. Info on Amphenol RF relays?

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-02-26 00:00:00 UTC
From: Jeff Anderson <jeffa@ix.netcom.com>
Message-ID: <6d3qnc$gvf@sjx-ixn2.ix.netcom.com>
Source record: 109363
Cross-posted to: rec.radio.amateur.homebrew,rec.radio.amateur.boatanchors

I need an antenna T/R switch for my SX-117/HT-44 pair.
I just dug a couple of RF relays out of my "relay box," but
I don't know their contact ratings, and I can't find any
additional information about them.

They are both Amphenol (or Amphenol Bunker Ramo?)
relays, with the following part numbers:

300-10519
300-10004

They both have 26 vdc coils and BNC connectors.

I found some similar (but not identical) relays in
the Surplus Sales of Nebraska catalog, and as near as
I can tell the ratings are either 50, 100, or 300 watts,
but I can't tell which.

Any additional information on these relays would be
*very* much appreciated.

Thanks,

- Jeff, WA6AHL

Hi,

I would not let missing core slugs bother me much. You can always
find/make new cores to resonate them to the right freuquencies with
the right Q. (These frequencies, of course, you know already, jus
from understanding how the receiver works). No biggie.

Don, W6JL

## 3083. FS Tektronix Type M scope plug-in

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-02-26 00:00:00 UTC
From: "csc@smartt.com" <csc@smartt.com>
Message-ID: <34F5E5CF.156@smartt.com>
Source record: 109375

For Sale,

Tektronix Type M plug-in for 530, 540 and 550 series scopes.

This is a 4 trace pre-amp and comes with manual.

$50 US including shipping.

Please reply to csc@smartt.com if interested.

Colin

# 3084. FS: RF-Harris SSB gear, etc.

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-02-26 00:00:00 UTC
From: Sandy W5TVW <ebjr@postoffice.worldnet.att.net>
Message-ID: <6d4l0r$stp@bgtnsc02.worldnet.att.net>
Source record: 109376

RF-Harris gear for sale. I will be willing to sell
individual pieces as follows:

2 ea. RF-Harris model RF-230M 2-30 Mhz SSB Xcvrs.
$175 each. ($325 if both taken)

1 ea. Matching power supply (115v in/12 volts out)
for RF-230M Xcvr.
$125

1 ea. RF-Harris RF-231 antenna coupler for RF -230M
$125

1 ea. Lot of spare PCB's and modules for RF-230M
(over 2 complete sets of boards)
$175 ($150 if purchased with RF-230M above)

2 ea. Newmar power supply. 115 vac input, 35 A. out.
$150 each.

1 ea. TI-3000 SSB transceiver with antenna coupler/PA
module.
$100

All prices exclusive of shipping/packing costs. All gear
was working when removed and has been in storage for some
time. If the whole lot is purchased, I will throw in a manual
for the RF-230 transceiver. Lot price for everything: $1000
FOB.

Ah! I knew that what once was the xtal arm of ITT plant was still
on the go, but didn't know their new name. I certainly didn't know that
the folk from SEI had moved there. I suppose Dave Standring and Ron
Pallister must have retired some time ago.

Taking a scan over my drawers full of crystals will reveal roughly
equal numbers marked ITT, SEI and CCL.

Does anyone know what happened to the mag cores side of SEI? that
power meter I did for the G-QRP club used a couple of their toroids.

Cheers
David GM4ZNX

Source record: 109250

Okay, guys 'n dolls, here's the deal...

I have three 7010 KHz crystals in CR-1A holders. I've tested them and they're all working. I will let them go, ONE PER PERSON, to the first three people who email me, for US $1.00 each, postpaid to US addresses. Note that these crystals will NOT fit FT-243 sockets! The spacing is correct, but the pins are larger in diameter, like those used on the old BC-610 type crystals. You'll have to make up an adaptor to plug them into an FT-243 socket (like I did).

Dean, K5DH

Source record: 109262

I found a Hallicrafters S-38E SWL receiver at a local consignment shop, and was wondering what it *should* sell for. The seller wants $49.00, and it does work, though the shafts on some of the knobs wobble a bit, and there is a small ding in the upper left corner of the case. Otherwise, the radio looks and sounds very good, I'd say 8.5 cosmetically. Was able to pull in BBC clearly on 31 meters at 1400 local, indoors with a short wire. What's it worth?

--Will White

Dear USA/Canadian Buyers,
I suggest that if you order from outside the USA or Canada, you check very, very, very carefully to make certain that the factory's warranty is honored in US. It is often the case that SE Asia warranties bear little resemblance to those warranties on products that are packaged for sale in the USA. Check also for FCC type acceptance and for UL and CSA listings/certifications. Without UL listing on, for example, a power supply, it is not legal to sell it in the city of Los Angeles, among others, and without CSA certification it is not legal to sell it anywhere in Canada. Just a word to the already wise and wary.

Ivor,
Without doubt, the American who replied is confusing Beer with Lager!
Lager needs to be drunk cold, but as for Beer, esp. Real Ale as you stated,
it's optimum temp is nowhere near that of Lager.
A nice pint of Dogbolter would go down fine right now!

Alan

# 3118. FS: Two RCA #45 Used Tubes

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-02-27 00:00:00 UTC
From: l.mclaughlin@popmail.csuohio.edu
Message-ID: <6d6kg7$a05$1@csu-b.csuohio.edu>
Source record: 109271

Two RCA #45 used tubes for sale with my actual TV-7D/U's readings/ratings for each tube.

Tube dealers due to large volumes of tubes generally cannot spend the time to give you the actual "performance" of the tube on a calibrated TV-7D/U tester in excellent shape (Please understand your readings can vary obviously). They simply say the tube passes usually and you could get a mediocre pass at best to decent very strong tube with the luck of the draw that's really like a new tube. I have had this experience.

Have rated and priced the following two tubes accordingly:

Tube 1: RCA 45

TV-7D/U's Minimum Acceptable Value = 47

" Actual Reading for tube 1 = 78

Asking price $50.00 or B/O plus shipping. This tests approximately like a new tube in my opinion!!!

Tube 2: RCA 45

TV-7D/U's Minimum Acceptable Value = 47

" Actual Reading for tube 1 = 65

Asking price $40.00 or B/O plus shipping. This is a strong used tube in my opinion.

International buyer welcome.

Thank you.

>I got a Meissner receiver (only name on the dial, no type), but did not find any receiver built by this manufacturer on the WEB.

I have info on similar models, but not this one. The Meissners were kits and inexpensive, but fun - likely mid-'50's. Similar 3-bander, T6BK, sold for $43; the 8" spkr was another $3. Check old mags from '54-56.

# 3122. FS, WTB, Trade Parametric Amplifiers

Have a copy of the book PARAMETRIC AMPLIFIERS FS or Trade. Would really like to get a copy of CQs Surplus Schematic Handbook. Parametric Amplifiers is a real boatanchor book. Use all of your old octal based klystron tubes to build a "Low noise" front end for a receiver. Has design info for 50, 144, 220, 432, 1296, 2350 amps. Learn plumbing and metal working as you cut and solder waveguide and cavities. Send note if you are interested in this book or if you have a copy of Surplus Schematics FS. Gene Martin.

Hi Robert,
Glowbugs (devoted to homebrewing with tubes) has moved - the entire
list was transferred to another site. I'm receiving posts from the
new site but I'll be danged if I can recall its name right now.

The (free) BA list is still running; send an email to:
listserv@listserv.tempe.gov and only write:
subscribe boatanchors
and you'll be hooked up.

It sounds like you're talking about the PRC-74. We got them in the
Army in 1978 to replace our old AN/GRC-109s. They are nice rigs.They
were replaced with the PRC-70 a few years later,as it has FM wideband
capability to communicate with the basic tactical army nets.
Fair Radio Sales has antennas,etc. IIRC the power requirements
were pretty basic, like 14 vdc i think. I've seen battery boxes at
ham swaps, and once i saw a PRC-74 for $600.
You might check the Mil Comm website at

http://telalink.net/~badger/millist/mi.html

If you get it, i have brief operating instructions in some
manuals, i could copy for you.I don't know anything about it's
ease of repair.Hope this helps. KB6OWW Larry

Not really. We had a message store-and-forwarding system, and that's
about it. The opportunities that a real network provides are
substantially greater - digital voice, video, web access, etc.

Hi Jim,

Are you sure you need a replacement FET in the front end?

The FT-101E has one of the hotter receivers in a transceiver with a Min Des Sig of -141 dbm.

FT-101E
IMD dbpep -34
Min Des Sig -141
Rcvr Blk Range 108
Dynamic Range 81

Would be interesting to see what your results are with a substitute FET in there. Keep us all informed.

Source record: 109152
Cross-posted to: rec.radio.swap,rec.radio.amateur.boatanchors

I have for sale two Millen model 90901 1" miniature panel mounted cathode ray oscilloscopes, complete with bezel and panel control of intensity, vertical centering and horizontal centering. This oscilloscope produces unusually sharp traces. The front panel bezel is 2 11/32 inches square.

These were popular in the early 1950's, several radio manufacturers built these into their gear.

Specs:
Power supply 600 to 900 vdc at 3.2 ma. 6.3 volts ac at .6 amperes.
Vertical deflection sensitivity 1.7 volts r.m.s. per millimeter deflection. Horizontal deflection 2.5 volts r,m,s, per millimeter deflection.

Weight is 10 oz.

The bezel is the same size as a standard two inch square case instrument.
The crt's function normally with no trace burns.
Original Millen manual is included with the pair.
I will sell for $100.00 each or both for $190.00. You pay the shipping.

Dennis WA6SDJ

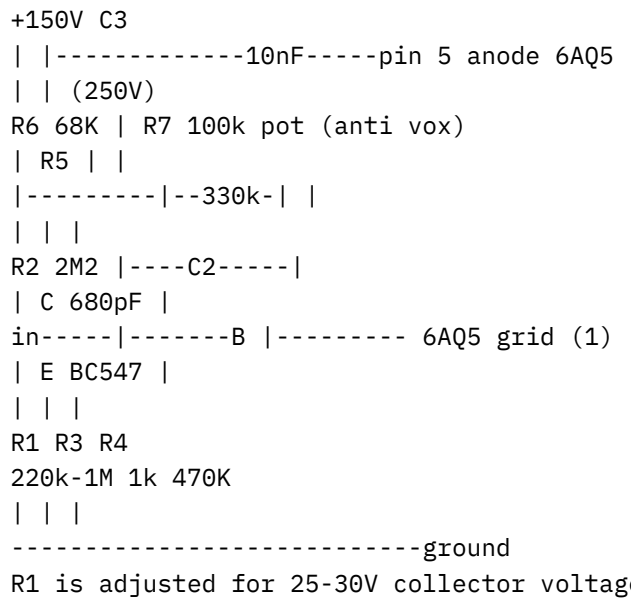
Message-ID: <34f87450.26630908@news.sol.no>
Source record: 109156

TR-4 may be greatly improved by adding some audio gain. The problem does
not exist for the TR-4C, in fact the circuit shown is copied from this
rig. below is shown a simple additional circuit to install. Transistor:
2N3904, 2N4401, MPS2926, MPS3394 or BC547 (as quoted)
(tested in 1979).



R1 is adjusted for 25-30V collector voltage

use edit or notepad to see the circuit.

email: LA8AK@online.no

# 3147. DFD3 will blow your mind

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-02-28 00:00:00 UTC
From: neil <neil@aade.com>
Message-ID: <34F88704.7C09@aade.com>
Source record: 109160

Announcing DIGITAL FREQUENCY DISPLAY 3.

DFD3 has 10Hz resolution and digital filtering to eliminate flicker due
to roundoff error.

DFD3 has it's own band selector and mode selector which is set to match
the band and mode the radio is operating on.

TO UPGRADE BOATANCHORS:
DFD3 is for multi-band radios usually consisting of a crystal controlled
converter followed by a tunable (variable) IF. This includes all
Collins,
many DRAKE, many SWAN, and scores of others.
Each band is programmed for an offset which, when added to the measured
VFO frequency, produces and displays the RF frequency.
Each band can be calibrated to within 10Hz.

Here's the really neat part:
DFD3 WILL AUTO-PROGRAM ITSELF
for more than 80 different models of radios from more than 20
manufacturers. Complete list is posted on
http://www.aade.com/dfd3.htm#radios

FOR GENERAL PURPOSE AND QRP:
DFD3 allows for 1-32 bands. There is no law that says these bands have
to be on the same radio. You can store three 5 band radios,
a 10 band radio, a 3 band radio and 4 single band radios
all at the same time (or any other combination).
All you have to do is remember which bands go with which radio.

Data is stored in EEPROM so it is retained with power off.

Price is just $49.95 + $1.50 S/H in KIT form.

For backlit display module add $10.00

CHECK IT OUT AT: http://www.aade.com/dfd3.htm

Also check out:

DFD for QRP and single conversion superhets.
http://www.aade.com/dfd.htm

DFD2 for the Collins S line, Yeasu FT-101 and Kenwood TS-520S
http://www.aade.com/dfd2.htm

DFD4 for 0 to 3GHz, (make a bench top freq counter for < $80)
http://www.aade.com/dfd4.htm

Coming soon:
DFD4A for VHF, 0-400MHz, 10Hz resolution HF, 100 Hz VHF

L/C Meter IIB 1nHy to 150mHy, .01pF to 1.5uFd.

Agree with you 100%. If and when this gear arrives in your local airport or whatever, you will have to go through paperwork to clear it through customs. Even for a one-of item, you may not want to do all the work yourself, and end up by hiring a local customs broker to get it through. All in all, the expense is not wholly predictable in advance. I know through bitter experience what the US Custom rules are like. So this is a case of buyer beware and be aware..........

# 3179. Re: Hallicrafters S-38E

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-02-28 00:00:00 UTC
From: jimkd1bx@aol.com
Message-ID: <19980228105001.FAA18747@ladder03.news.aol.com>
Source record: 109284

The Hallicrafters S-38E was made from 1956-1961.

It is a General coverage superhet, single conversion receiver.

The E model has a gray metal cabinet with silver trim.

The S-38EB has a blond wood case with gold trim, and the S-38M has a mahogany wood case with gold trim.

The radio if it is in very good to excellent cond, is worth $25-$50.
So the $49 dollar price is in the ball park...

Sold new in 1956 for about $60.00

hope that helps...

Jim

# 3180. Needed:FT-102EX Manual

Whilst we all lament the loss of Cathodeon and SEI in many ways the
biggest loss is HP crystals / oscillators I notice that the 105? OCXO
now changes hands at a premium price and someone suggested scrapping old
HP counters to get the OCXO. Whilst with HP Don Hammond was one fo the
few who could visualise Quartz temperature coefficients/ for 2
simultaneous quartz angle of cut orientations. He also was responsible
for the LC cut that had significant advantages over platinum for
temperature measurement another instrument greatly missed..
The contraction of the UK quartz buisness has been going on for some
time SEI incorporated the technology that came from Marconi Hackbridge
where I did the first? low power TO5 oscillator within a vacuum for
insulation.

Hi,

I'm currently in the middle of fixing up a Johnson Viking Ranger transmitter. I've found several problems with my particular unit, but one thing I found wrong with it that I'm not sure how to resolve involves the two-section wafer type "OPERATE" switch. This switch assembly is designated on the schmatic as SW4A and SW4B. Upon close inspection I see that a couple of the contacts have been partially vaporized from arcing due to a H.V. short.

My questions are:

1) Is there anyone that rebuilds switches like this?

2) If the answer to #1 is "NO" then by any chance is there anyone who might have a junker Ranger that would be willing to sell me the part?

3) Is there any other alternatives I haven't thought of?

Any and all help will be greatly appreciated. What appeared to be a weekend project has quickly become a major undertaking.

Thanks,
Brian (KB8IIC)

## 3193. Collins KW-1 for sale

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-03-01 00:00:00 UTC

Once upon a time, the small asian scramble-wound grid choke in a rig with two big sweep tubes opened up. Grid bias was lost and the tubes vaporized instantly...
To prevent this, add a large - 150K or so - resistor across the choke in all tube rigs.

Hello Everyone!

A friend has asked me to post his Vibroplex bug for sale. It is an Original Standard with a grey wrinkle finish base. According to John Elwood's (WW7P) dating guide, this key was manufactured in 1967. It is in excellent (near mint) condition. Both paint and chrome are nice. Dot and dash contacts show hardly any use and I think this bug didn't get much air time (if any at all).

This original has a circuit closer.

Typically, the fingerpieces and the circuit closer are black on the Original Standard model. However, this key has red fingerpieces and circuit closer like the Deluxe (chrome-based) keys. The owner believes that his father ordered his key this way from Vibroplex.

Price is $100.00 plus shipping. I would be happy to demonstrate this key with an oscillator or sounder over the phone if you'd like to hear it!

Please respond by e-mail if you are interested in this key.

Thanks for the read!

73,

Derek Cohn

I have FS a nice 1967 EAC R-390A, $600 + shipping.

This is a rig that I built up for myself, and then came upon a unused rig, so this one (reluctantly) has to go.

It has all 1967 EAC modules. It has been completely disassembled, cleaned, Deoxed, tube checked, lubed and aligned, including PTO endpoint and linearity. Tuning is very smooth.

Comes with original meters, covers, '67 EAC nameplate and generic R-390A nameplate, black tube shields (except 0A2), and photocopy of operator's manual.

Mods:

Capacitor changes in audio module for enhanced audio.
BFO coupling cap change for enhanced SSB reception.
Limiter mod to make it usable.

What I have not done to the rig is repaint the knobs or panel. I give them about a 9. Operationally, this rig is a 10.0. Ready for DX. Not a project, plug and play.

Guaranteed. Please write for more info if needed.

Hello,
I am looking for a manual for a Yeasu Sigmasizer 200R.
This is a 2 Meter radio. I believe it was sold in the early 1970s.
I will be happy to pay for a copy and shipping.

If you can halp, please reply to my personal email, as I
do not always check the news group.

Thanks,
de Gary WY0V

# 3226. MANUALS --- CLEAN UP AND MOVING SALE

Newsgroup: rec.radio.amateur.boatanchors

Source record: 109318

I am cleaning out my shack and divesting myself of a lot of radio manuals that I have collected over the years for older equipement. For instance, I have two excellent condition original manuals for the Hammarlund HQ-180 receiver. These 50 page manuals are hard to come by and include schematics for the radios. More like a service manual than an operating manual.

Here are some other samples. All original copies.

Heathkit DX-60B, SB-200

Hammarlund HQ-129-X, Hq-140-X HC-10 Converter, HXL-ONE, HQ-170, HQ-170A

Drake MN-7, PS7

Swan 250C

I even have a like new 24 page Johnson brochure for all the Johnson models I think in the 60's.

I would like to sell these. Please don't write and ask me to make copies, for I do not have a good way of doing it.

Please write me at this address: cvaughn2@yahoo.com

I do have some copies of other manuals on Hammurland equipment too. Write me with a request.

Will ship any of the manuals first class for about $1.50 postage plus price..

Charlie

> 3) Is there any other alternatives I haven't thought of?

Well, you can always try to rebuild the switch yourself. Yes, I know it is
going to be difficult, but it can be done, cause I just did it myself. Here
is how I did it.

1) Scrounge an old switch with similar contacts.
2) Using a Dremel tool with a very small grinder, grind the rivet that is
holding the contact to the wafer. Do this twice - once on the old switch to
remove the burned contact and once on the junker switch to salvage a new
contact.
3) Using very small hardware, attach the new contact in place of the old one.
If you don't have any hardware small enough, visit your local clock repair
shop. They will probably have something that will just fit. The bolt will
probably be much too long, so after tightening the nut on it, just clip off
the excell bolt with a pair of side-cutters.
4) Put a bit of silver solder (if you have it) on the nut to lock it in place
and you are done. If you can't get any silver solder, use plain solder
instead.
5) You might want to practice on another switch before you begin surgery on
the Ranger. I did, and it was worthwhile!

As I said, I recently rebuilt a switch with three burned contacts this
way using a junker that I found in a flea market for $0.25.

Good luck.

On (Sat 28 Feb 1998) I had a QSO with UK Radio amateurs who
were happily sending packets to USA, to telnet to a group who included
a USA amateur who was in the same group - but using a regular ISP
internet connection!

It seems the guys who set up this "net" issue their own internet ID
number sets (the famous sets of digits separated by fullstops), except
the first number is 44 (instead of a 3-digit one). The "44" signifies
a amateur packet connection, and such an ID should not pass through
a server here as if it were a regular internet packet.

I tried telnet into this packet server, but I must have done it wrong.
My ISP accepted the address, but failed to connect. I freely admit
there is just so much I don't understand about how this is done. I
think that launching a packet to a US station by amateur radio
is unlikely to be illegal here, just because some other users of that
station happen to send their stuff via an internet route..

While this subject is interesting enough to roll up unusual numbers
of postings, I have got to admit that it is probably in the wrong group.
I'm not fussy or pedantic. Say it here if you like - but you may
expect some flak eventually from the net "hobby bobbies".

## 3242. FT-301

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-03-02 00:00:00 UTC
From: rhawk@megabits.net
Message-ID: <34fabf28.6226703@news.megabits.net>
Source record: 109197

FT-301, Covers 160 through 10, no WARC bands but
there is an extra bandswitch position. 200 watts pep
input. all solid state, analog display. later all solid state
version of FT-101, I believe. the front panel is 8 to 9
with all origional knobs. the case is 7 with some minor
scratches. includes, origional manual, which includes
alignment instructions, with schematic and micropnone.

the receiver is distorted in the SSB mode while I did
make one contact on 40 meters, the ssb receive
audio was poor.

I would say the receiver needs a realignment,
especially the sideband detectors. The transmitter
has NO apparent problems and makes full output.
Oh Yeah, one of the dial lights is burned out.

Price will include shipping, as this is heavy an dence
and needs to be shipped in a box with foam injection.

$300. Firm

Bob

>
> Steve - WA6GSD

Steve,

That is a very good deal. I've used my TS820 for over 18 years,
and I would not part with it. Someone should snap that one up.
(I am tempted myself!) In case others do not know: The TS820 has a
built-in AC supply, pi-net tuning (no fussy solid state SWR shutdown),
and has FSK built-in, which the TS830, 430, and 440 do not have. Also
has a built-in (small) speaker. Mine still works perfectly after
thousands of hours of CW and FSK operation, with original 6146 final
tubes. It is a great AMTOR/PACTOR rig also, switches in under
15 mSec. In addition, it has an extra, non-dedicated spare bandswitch
position (AUX), in addition to WWV/JJY band position.
Years later, if you (ever) want to part with it, it will likely be same
or better price as when you bought it.
'Nuff said.

73,
Don, W6JL

HP is still making quartz oscillators and crystals. The 10544
OCXO was replaced 20 years ago with the vastly superior 10811.
The 10811 uses the doubly rotated SC cut, which was invented
here, but not by Don Hammond, rather Jack Kusters. Don does
get credit for being the founder of our quartz operation.
As you say, it is worthwhile to save OCXO's from scrapped
counters. (Incidentally, old ones are better than new ones
because they age less, in general). We have recently begun
production of the E1938A OCXO, with much better stability than
the 10811. For details, see my technical papers in the
proceedings of the 1997 IEEE Frequency Control Symposium. (Please
don't ask me to email these papers; we're not set up to do that.
However, we can snail mail hard copies to people seriously
interested ). We don't sell any oscillators on an OEM basis
at this time. However, you can probably order a single unit
as a replacement part for the product it is used in.

This model receiver seems difficult to locate. Are they really that rare? Does anyone know how many were made and how many are still around? I see at least one is in Russia (see March 98 QST).

I would like to hear from some of you that own an SX-28 or 28A as to their current value/price.

Thanks for reading, Mark. W6LKV

I have a new Astatic JT-30 mic for sale. I'm guessing this to be about 30 years old, but I'm not sure. This appears to never have been used. Complete in box with base and two cords, one terminating in phono plug and other with XLR connector. Tag from Astatic is still on cord. Will sell to best offer since I have no use for this mic.

Message-ID: <19980302003401.TAA11971@ladder02.news.aol.com>
Source record: 109333

I have two AMECO converters for sale. One is the 6 meter converter, model CB-6, and the other is the VHF converter, model CN. Both include the matching power supplies, and although untested, appear in great condition. (Some slight marks on the transformer on the power supply, but nothing extreme). I have no need for these, so will sell to best offer. Reply via E-Mail to: KenN2SQW@AOL.COM

## 3265. FS:AMECO TX62 transmitter

## 3270. Old W.T. Grant Radio/Phonograph

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-03-02 00:00:00 UTC
From: Iam <jrose@mail.northweb.com>
Message-ID: <6ddii1$3j1$0@209.2.157.23>
Source record: 109339

I am trying to restore an old AM-FM radio/phonograph which was purchased at a W.T. Grant store back in the 60's or early 70's. I believe the brand name is Bradford. I'm not getting any sound from it. The speakers are okay and I would like to check the fuses but am unable to locate them. Does anyone have any suggestions for obtaining schematics for this?

# 3271. Re: Drake R-4B?

There is ** NO ** V6 in the R4-B. It skips from V5 to V7. On the
schematic there IS a Q6 transistor stage in approximately the place in
the signal path that a V6 would have been.

Joe OM,

It would be helpful for interested parties, if you could provide more
info.
Is it a Communicator I, II, III, or IV? The first two have the
tuning-eye
tube in the center top front panel, the III has a meter instead and has
rounded corners on the cabinet (often white cabinet), and the IV is in a
flattish shaped, gray/black cabinet. Looks totally different from the
other three.
I once worked for Gonset on the production line, aligning Comm IV's.

73,
Don, W6JL

# 3278. Re: FS: Two RCA #45 Used Tubes

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-03-03 00:00:00 UTC
From: Ethan <ethan@olywa.net>
Message-ID: <34FC89AB.E8AE391@olywa.net>
Source record: 109098

These prices are still insane for these tubes.
They're also posted on rec.antiques.radio+phono for $5 less- still a
nutso price (AES has them for $30; most hams seem more than happy to get
$20 for them).

Caveat emptor.

Hey Mate,
How come this mellow gets the ream job for selling his 45s at what most audio guys consider a
bargain and yet a few listings later a fellow is selling his Collins 312B5 for 700 bux and not a
peep? Is this a case of situational ethics here? The tube dude's mistake is not posting them in the
audio tube newsgroup or perhaps this is crosspost to us hams which was perhaps another mistake. Lets
see, an 8950 sold for about 3 bucks about 25 years ago and if you can find one in a ham's collection I'd
like to see you buy it for less than 60 bucks, A 45 tube sold for about $1.50 about 50 years ago so
adjusting for inflation and other market pressures, I'd say 50 dollars is about right for a 45 tube.
Nuts? don't think so.

Have an original Johnson Valiant I Manual. Includes 54 page op. manual, Viking Valiant Information Bulletin #1, and the 40 page assembly manual. Plastic comb binding was damaged and was damaging the edges of the pages, so pages are in clear sheet protectors in a 3 ring binder. Pages are clean and untorn (except for that slight damage on the binding edge). Assembly manual has marks in the assembly step check-off spots.

$35.00 plus $5.00 shipping.

# 3292. Parting out Heathkit SB-610

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-03-03 00:00:00 UTC
From: jangus@netcom.com
Message-ID: <jangusEp8235.D4A@netcom.com>
Source record: 109218

Good evening. I recently bought a cosmetically clean SB-610
and between that and the one I owned with the holes drilled
in the panel, I know have a clean working one.

The good news is that I also have a surplus of Heathkit bits
and pieces. Green knobs with aluminum skirts, several hard to
find switch wafer assemblies and some other goodies.

What I *don't* have. The power transformer or the CRT.
I do have a case with some of the paint flaking off, feet and
the bezel and graticle assembly. And of course, most of the
wiring harness.

All or part, let me know what you're looking for.
Reasonable price on the parts or the entire "basket".

Thanks.

73 es GE from jeff

Oh, and a spare copy (not original) of the manual.

Good evening folks...

I'm getting rid of my National RC-105, S/N C530, (military HRO-MX) with a complete set of coils (8) and coil box. Coil set covers 100 KC to 30 MC. Even includes a doghouse power supply. This radio is not a "JR" model, it does have both a crystal filter and s-meter.

I just finished putting a new Hammond power transformer in the doghouse. Doghouse has three wire power cord, inrush current limiter, and line fuse added in a completely easy to reverse mod. (no holes added!)

This radio has been completely recapped with RF rated metalized poly caps and all new metal film 2% resistors were installed at the same time. Radio has all new tubes and I'm throwing in a set of NOS spares to go with it.

This is a very hot rig thats works very well. Electronics are 9.5+ and cosmetics quite good. No rust, nice and clean inside, black wrinkle could use minor touch up. Original brown cloth wrapper is still on the cable to the doghouse and is in very good shape.
The coil box is black wood and in only fair shape.

S-meter works well, but is not original/correct.

Now for the bad news: I need to get something near what I have in it.
I could sell the eight coil sets for $20-40 each by themselves.
The radio is up for auction at e-bay. Current hi-bid is $275.

http://iguana.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=6995077

About 2 days left to run on the auction.

More information and pictures are at e-bay also.

This works for metal film resistors. Indeed, the manufacturer trims them
just that way to get precision values. For carbon composition, you grind
through the vitrious body, and nothing happens. Then the body falls
apart or the composition material dribbles out. Not what you wanted!

I have for sale a Conar 500 receiver and 400 transmitter. Bands are 80,40, and 20 meters. Transmitter is crystal controlled with 25 watts input power and operates on 117vac. The receiver is a 4 tube superhet, is tuned with a variable capacitor and has a BFO, receives CW,AM, and SSB (with BFO), has built in speaker. Also operates on 117vac. Both units are in very good condition with original manuals. I am asking $85 for the pair. Email direct if you are interested, thanks. John N0EE

# 3307. FS: RCA 45's -- $45 & $35 Respectively

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-03-03 00:00:00 UTC
From: l.mclaughlin@popmail.csuohio.edu
Message-ID: <6dh735$5o2$9@csu-b.csuohio.edu>
Source record: 109233

Two RCA #45 used tubes for sale with my actual TV-7D/U's readings/ratings for each tube.

Tube dealers due to large volumes of tubes generally cannot spend the time to give you the actual "performance" of the tube on a calibrated TV-7D/U tester in excellent shape (Please understand your readings can vary obviously). They simply say the tube passes usually and you could get a mediocre pass at best to decent very strong tube with the luck of the draw that's really like a new tube. I have had this experience.

Have rated and priced the following two tubes accordingly:

Tube 1: RCA 45

TV-7D/U's Minimum Acceptable Value = 47

" Actual Reading for tube 1 = 78

Asking price $45.00 or B/O plus shipping. This tests approximately like a new tube in my opinion!!!

Tube 2: RCA 45

TV-7D/U's Minimum Acceptable Value = 47

" Actual Reading for tube 1 = 65

Asking price $35.00 or B/O plus shipping. This is a strong used tube in my opinion.

International buyer welcome.

Thank you.

Hello,

I have for sale a DX-100 and HQ-170. These items were purchased and I have not had time to get to them, so I hope someone can use them.

DX-100 - Good shape, original cabinet repainted, but no extra holes. It looks like there are two non original knobs and one no original togle switch, no extra holes in the panel. Electrically untested as had no time to bring it up on a variac...
$125 - prefer chicago area deal as 100# +
HQ-170
It plays.... A couple on non original knobs, no extra holes in cabinet or panel. no clock. The chassis has a little bite so would need some minor TLC.
$160 - plus shipping from 60067.

Thanks
Mark

W6EH wrote:

>Is there such a thing as a 110 volt 60 hertz Dynamotor?(Powered by 13.8
>VDC)

Yes, there were plenty of them made before the introduction of the solid-state DC to AC inverter. However they were not usually called "dynamotors" but rather "converters", "rotary conveters", "inverters" or "rotary inverters", depending on the author.

Here are some old-timey definitions:

Motor Generator ("MG") set - A power conversion device consisting of an electric motor coupled to a generator. The motor and generator can be AC, DC, or any combination, and the only connection is mechanical.

Dynamotor - A DC-DC conversion device consisting of a single unit that has one rotor (with two windings and two commutators) and uses a single field coil structure.

Inverter - A DC-AC conversion device, similar to a dynamotor. The name derives from the fact that it performs the opposite (inverse) function of a rectifier.

Frequency changer - An AC-AC conversion device used to produce power of a different frequency than the available source.

Converter - General name for motor generator sets, but usually applied only to inverters and AC-AC machines.

The term "rotary" is often added before the names that do not include the word "motor" to stress that these are rotating machines. Today you will sometimes see the word "static" applied to electronic systems that perform the same functions, to stress that they are NOT rotating machines.

Just LOVE to hear them whine, though.....

# 3332. Re: FS: Two RCA #45 Used Tubes

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-03-04 00:00:00 UTC
From: Bob Miller <bmiller@calweb.com>
Message-ID: <34FE09AA.47E6A76E@calweb.com>
Source record: 108959

Hi Ethan,
The Fellow (Mello) according to my first post [tsk tsk on my typing], can ask any damn thing he wants and I guess anywhere he wants. What burns my buns is when some coward jerk (Bozo.*) blasts into the net, takes a metaphorical dump in public, and then hides behind some synthetic net shield to avoid any dialogue that might be directed his way. That's my take on the situation and nothing more I don't know the Fellow (mellow) that was selling the 45s and I am sure anyone who may be looking for that tube is cognizant of their value and will certainly shop around. As I have mentioned in other posts regarding value put on equipment; no one seems to mind that some poor neophyte Collins collector may be nuts enough to pay $750 for a 312B5 remote VFO, yet will jump in on some bloke for having dilusions of riches selling some piece of junk that may not seem to have any intrinsic value. I love this hobby.

Bob, KE6F

From: skywaves@bw.webex.net
Message-ID: <6dlaoa$qrk$1@nnrp1.dejanews.com>
Source record: 108962

Tube Lore is available directly from the author for $19.95 post paid to
North American addresses, $24.95 elsewhere. Send CHECK or MONEY ORDER to:

Ludwell Sibley
44 E. Main St.
Flemington, NJ 08822

You can also get this book from Antique Electronic Supply, and others,
but think you pay postage on top of the $19.95.

I highly recommend this book to anyone interested in tubes. It is not to
be confused with a tube manual, there are no base diagrams or spec. sheets.
There is, however, a lot of information covering application, date of
introduction, equivalent types, ancestors/decendants etc. Virtually every US
manufactured tube is covered. It clears up alot of the mystery surrounding
thousands of tube types.

73,
Al

# 3342. Gonset Communicator IV's 220 MHz!

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-03-04 00:00:00 UTC
From: Scott Gray <comm5@pacbell.net>
Message-ID: <34FE585B.92CE43E0@pacbell.net>
Source record: 108969
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.swap

One of the last and rarest Gonset Communicators. Model 3351 220-225 MHz
version.
AM 20 watts RF, high level plate modulation, 8 channel transmit,
tuneable receive. Very easy
to convert to NFM.

Sorry, no matching VFO - common find at swaps.

Interestingly, the model 3351 - Still in the original factory carton!!
Manual,
accesory packet,(223.500 Tx Xtal, PL-068 Mic Plug, Fuses). AC and DC
power cords. Warranty card. Not painted Civil Defense Yelow or CD
logos..
Factory stock.

Box is openend, but the radio never fully removed.

To make things MORE interesting about this particular model...
**I have TWO** (not seeing double, eyes recenty checked). Yes, factory
carton and accesories just as described above on the second unit!

I would like to swap or sell the pair - rather not break-up the set.

Things I'm willing to take in trade: Gonset G-28, G-50, Communicator
IV's
(6 Meter) w /VFO, Drake T4XC/AC4, Drake TR4C-W/AC4, Clegg 66'er,
Thor, VHF AM "boatanchors" in excellent shape. Also interested in
'high-end" QRP (as in Ten-Tec) HF. SGC 230 Antenna tuner. Possibly a
Ultra nice "simple" linear amplifier (4-811s) like a Gonset GSB-101/201,

Collins 30L1. PLEASE no 2 meter FM ANYTHING! Recent Kenwood SSB
equipment on 144 or 432 MHz.

Open to offers, Will take $$ - reasonable only.

Serious? Live local? We can take them out of the box and bring them up
slowly
with a Variac and check performance on a IFR 1200 S service monitor.

Located just east of Sacramento, Ca. 95682

# 3349. Hallicrafters S-40B & Yaesu FT-7

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-03-04 00:00:00 UTC
From: DavidC <davidc@bit-net.com>
Message-ID: <01bd471b$18c38dc0$498a92d0@davidc.bit-net.com>
Source record: 109116

I have recently acquired a Hallicrafters S-40B and it needs alignment and cleanup. Anyone have a schematic and any helpful hints for restoring this interesting classic receiver?

I am also getting a classic little Yaesu FT-7 next week. Any known mods, predictable bugs-with-age, suggestions for maximizing this sweet little low power mobile HF rig?

Thanks & 73 in advance!

Hi, Cal. Woody here in Colorado.
I am looking to buy the four pin plug
that goes into the jacks on the back of
either the Johnson Viking Thunderbolt
or the Johnson Viking Pacemaker.
You can see a closeup of this jack on my
homepage at
http://members.aol.com/w0ui
- Click on the QSL card at the top of my
page... then click on WANTED TO BUY
and you will see the closeup pictures.
Let me know if you have anything that will
work. I have found the, by forcing and
spreading the pins (after cutting the center
pin out)... the Radio Shack car stereo plug
can be made to fit but it is not the right one.
Thanks again.
73

# 3351. Get 6dB more sensitivity from an AA5, sub 12BA7 tube for 12BE6

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-03-04 00:00:00 UTC
From: wa2ise@netcom.com
Message-ID: <wa2iseEpA1w2.Ky6@netcom.com>
Source record: 109118
Cross-posted to: rec.antiques.radio+phono,rec.radio.amateur.boatanchors
Body handling: HTML body converted to readable text

Updated this from last week. Gain is 6dB, not just 3dB. Also explains
how to make a male tube socket.
http://www.geocities.com/CapeCanaveral/9178/radios/12ba7.html
for diagrams and pictures, as well as the below text.

<>Using the 12BA7 pentagrid converter to
replace the 12BE6 in AA5 radios

Get about 6dB more sensitivity

The 12BA7 is a 9 pin pentagrid converter tube, similar to the
12BE6 in most respects except its conversion transconductance
is 950 umhos. That's about twice that of the 12BE6. This makes for
twice as much sensitivity in a superhetrodyne radio, 6dB more gain (assuming
the AVC doesn't cut in). The plate resistance is about the same for
both. The 'BA7 has a pF or so more capacitence than the 'BE6, but that
will only affect the tuning of the upper end of the MW BC AM band.
And that can be tweaked out easily. And, important for a series
string heater system, the heater is identical.

I tested this mod on three different AA5 AM tube radios, and had no problem
with unstable oscillations or tweats or birdies. And signal gain
went up in all those cases. It was not really effective in an AA6
(an AA5 with RF stage) though. Because the RF stage provides enough gain
to cause the AVC always to cut in. But the 12BA7 works well in the
standard AA5 radio.

I built an adaptor socket going from the
7 pin 12BE6 basing to the 12BA7 9 pin basing. This makes the radio
easily restorable back to the 12BE6 if desired. The following
cross-connections were done: (7 pin socket pin) to (9 pin socket pin(s)),
1 to 2; 2 to 3, 6; 3 to 4; 4 to 5; 5 to 9; 6 to 1, 8; 7 to 7.
This connects all the similar types of electrodes the same way as
in the orginal AA5 circuit. The 12BA7 has an extra function, an
internal shield (pin 8). I connected this to the B+ line, 7 pin socket pin 6,
as this line is at RF ground potential. It's just a small piece
of metal interspaced between the plate and grid 3 (the signal input)
leads inside the bottom of the tube.
So, the DC potential has no effect. I also connected a short
length of insulated wire to this RF "ground" and placed this wire
into the center space holes of both the male and female sockets, to act as
additional interlead shielding. This is similar to the grounded
center of tube sockets.

Finding a male 7 pin tube type socket will probably be difficult. I took a molded female socket and removed the contacts. And then I soldered an inch or so length of solid 18 gauge (AWG) copper wire to the part of the contact that usually grabs the tube's pin. This thickness of wire is very close to the same size as tube pins. Did 7 of these and reassembled the socket, now a male.

Now, time to test the mod. Be sure you have physical room for the adaptor and 12BA7 next to the tuning cap (and you can tune), and inside the radio
cabinet. The 12BA7 without adaptor is as tall as a 50C5. The low end of the AM
MW broadcast band should tune as it did before. The high end of the band may be off calibration something like 50KHz, the top (1600) now not reachable. Tweak the tuning cap's oscillator section trimmer to bring 1600 back again (backing the screw looser should do it). Once you get the stations about where they belong on the dial, tweak up the antenna section trimmer of the tuning cap. Best tracking is usually had if you tweak up on a weak station near 1400KHz.

# 3352. FS: Hallicrafters SX-99

# 3355. Re: Looking for 9 pin plug

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-03-04 00:00:00 UTC
From: wa2ise@netcom.com
Message-ID: <wa2iseEpA44q.2wn@netcom.com>
Source record: 109122

In article <6dhhp6$jhr$1@nnrp1.dejanews.com> avitko@harris.com writes:
>Does anybody know who sells 9 pin plugs that fit into miniature tube sockets
>(like 12AU7 size)?
>
I recently needed to make my own. I took a molded 7 pin female tube
socket and disassembled it, removing the metal contacts. Then I took
some AWG 18 gauge solid wire and soldered lengths of it to the part
of the contact that usually grabs the tube pin. Prepared 7 of these, and
reassembled the socket, now a male.

AWG 18 gauge solid wire is very close to teh correct thickness of tube
pins. Worked very well for me.

Hope this helps...

Source record: 109125

Bob Miller wrote:
>
> Hey Mate,
> How come this mellow gets the ream job for selling his
> 45s at what most audio guys consider a bargain and yet a
> few listings later a fellow is selling his Collins 312B5 for
><snip>

Point 1 (already mentioned, but apparently not understood):
used 45s are READILY available for substantially less from
commercial resellers, eg:

$30 from AES
$25 from TUBE WORLD
$20 from Electron Tube Enterprises

In other words, your claim that the prices asked by "bostonian"
are "at what most audio guys consider a bargain" is completely
without merit.

Point 2: "this mellow" has been trolling for suckers EXTENSIVELY.
For instance, Dejanews reveals that he's made 600 odd posts trying
to swap misc pieces of junk for a hickok- we're talking about stuff
that is for the most part worth a small fraction of what a hickok
is worth. I first became aware of him when I noted his numerous post
trying to sell poor quality reel-to-reel decks for $150 and up (decks
that *might* be worth $50 if working properly- which his frequently
didn't).

If someone is asking a grossly inflated price for a Collins 312B5- by
all means, post about it. I certainly might IF I were knowledgable
enough
to make such a judgement (which I'm not), and particularly IF I'd noted
that the seller had made hundreds of posts in the past asking similarly
grossly inflated prices.

Ethan

Did you know that this site has over 200,000 manuals
and schematics from radios from day # 1 to about 1965?

http://www.electrosys.com/resource.htm

# 3377. FS:Knight-Kit T150A "PARTS RIG" $35 plus shipping

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-03-05 00:00:00 UTC
From: jvercellino@sprynet.COM
Message-ID: <199803050033.QAA11519@m1.sprynet.com>
Source record: 108971

I have a Knight-Kit T150A "PARTS RIG" for sale for $35.00 plus shipping from Chicago. As far as I can tell, the only thing it is missing is the meter. I'm just not able to get to restoring it, and I don't know if it's working, so I'm going to call it a "PARTS" rig.

I'l also include a copy of the T150A manual as well as some articles describing modifications to it.

Please respond to jvercellino@sprynet.com if you are interested.

# 3378. FS: Digital Bird Wattmeter

Newsgroup: rec.radio.amateur.boatanchors

I have for sale a FRR-59B receiver. 2.0-34 mc. 64 tubes. The set looks just like the FRR-59A that was made by National. The FRR-59B was made by Arvin. The set is in fair cond.but needs some repair. I am asking $425.00 for the set. It is pickup only in Dubuque, Iowa or I will bring it to the Madison WI. hamfest on April 5.

Message-ID: <34FE2433.7F77C62C@sprynet.com>
Source record: 108977

Howdy,

I have a bad habit I picked up when I was just 17: I grabbed every piece of Motorola Twin-V and UniChannel junk I could get my hands on. So now I have 2000+ lbs of this crap, a genuine Moto test set, and two copies of the "red" book.

I have been on this mailing list for one week and have learned:

1. That the book is called the "red book"
2. That there was a "yellow book" for earlier AM & FM(?) gear.
3. "Hollow state."
4. If I ever pick up military tube gear, I know where to get help.
5. I'm not the only nutcase out there collecting this stuff.
(Not that any of you are nutcases, but I am...;-)

Questions:

1. Are there any web pages for MBA's? (Motorola Boat Anchors.)
2. Am I the only nut trying to make these things run?
3. Anybody have ham-band crystals for these they are willing give up?

So far, this has been a great list. I hope to hear more great stuff.

Thanks,
- Bill
stuart5@sprynet.com

P.S. I also have Drake TR-4, RV-4, AC-4, DC-3, MN-2000, two IMTS phones w/ Secode heads, SX-99, BC-348, and lots of tube audio gear...
When does the hurting stop!?

Now that is a true boatanchor !!! But great receiver.

Correct me if I am wrong....but the government paid National for the development and production of the first couple of runs of the FRR-59B, later recompeted the next build and Arvin got the contract????

Hi Bob & group:

The reason Bostonian is getting the "ream" for the 45s, is because the postings are strictly "commercial" in nature, posted by a non-participating, non-boatanchorite. This is, after all, the Boatanchor site. If he was posting a set of 10's or 813's that would be one thing, but audio tubes is another. There are a few old projects that do call for the occasional 45, but the ads are fairly consistently audio"file" in nature.

Don't get me wrong, Bostonian is a nice guy, and has every right to be here. I have corresponded with him in the past & have high regard for him. I have even bot a set of 45s in the recent past for a project (on ebay at lower price). The price, however, is much higher than the "going rate" on ebay. For $100 (his asking price of the pair), one can find lots of 5 or 6 or more in either tested or unknown condition. A used pair, guaranteed good, goes for about $20 to $30 or less (globes more). an NIB ST Pair can be had for about a $100 (+/-). Another thought, the ad's presentation is full-o-blarney. OK to have the breathless pitch to audio"phial" guys, but us jaded old radio guys can just have a little chuckle.

73s & Good Regards don davis DXGUY@earthlink.net

Source record: 108987

I've always liked the Drake 2B receiver, and have often thought of building a 'vintage' station around one. Trouble is, I can't think of a nice vintage transmitter that would be a good match in size and styling. To be really useful, it would have to have a VFO, which rules out the 2NT. Any suggestions?

Message-ID: <19980305184000.NAA17676@ladder02.news.aol.com>
Source record: 108991

Does anyone have an idea of a SX 130's value?? Radio itself is in excellent working condition, cosmetics are fine-no scratches,dents,etc. I bought this from a guy who had it in his basement for years-he sold it to me for what he paid for it in the 70's....$50.00. My next task is to put it on the bench, and do some cleaning and check out the alignment, will need to get a manual.
Thanks for your time,
Ed N3KEX

Hi. I just picked up a very nice Johnson Ranger transmitter. The case needs repainting, and I remember reading here of someone who does that professionally. Anyone know who that is, and how I can contact him?

Also, this Ranger has a few tiny chips on the edge of the front panel. I know of the guy who sells the touchup paint. Any advice about how to touch it up so it doesn't look awful? How much to thin the paint, what kind of brush to use, do I buff, that sort of thing.

Thanks.

Unless the radio is say, 10 years old. Then you toss it in the trash
and buy a new one, for the custom-made chip that went bad is no longer
available anywhere. That's why we (here on the .boatanchors NG) still
operate BA gear; we're able to keep 50+ year old radios on the air by
trouble-shooting down to the one single bad component, whether it be
a resistor, cap, inductor, or tube. Replacement is easy due to the
wiring layout (point-to-point).

One wonders why you'd come onto the .BA newsgroup, and slam BA gear,
Gary (your R-390 comments). You've got to try to cease being so
confrontational. You're becoming a bit like Carl.

That's why I still have my heathkit SB 101, my SB401 and 303 receiver
and the drake twins, not to mention a Yazoo ft 101 EE, and my knight
kits that I converted to operate with the SB-10. MY Kenwood ts-530S
is not too bad along those lines but I have not looked too close at my TS-140.

I have just acquired a real nice SBE SB2-LA Linear Amplifier but UPS
trashed the tubes.
I am sure they will need to know what the replacement costs for the tubes
will be.
What will it cost to replace the six 6JE6 tubes with a MU-matched set of
six new ones?
What is the best source?

As a companion to my 2-B and 2-BQ, I use a homebuilt two-tube CW rig with a 6C5 oscillator and 6L6 final, running about 6-1/2 Watts output, crystal controlled, on 40m CW. I have a ball with it!

I'm about to start construction of a much bigger two-tube CW rig with a 6V6 oscillator and an 807 final, which will be crystal controlled on 80/40/20m CW, using plug-in 4-prong coils for osc and tank, and will run about 120 Watts input (yeah, I know, it's gonna be damned hard on the 807, but they're still cheap and plentiful). I'm going to use all 1950s-looking components in the transmitter to give it that "vintage" look. The power supply is already built, and it's fairly ugly, with a real homebrew look (because it really IS homebrewed!). This rig ought to be a real kick to use with the 2-B!

HP is doing a really good job of keeping it secret if they DO sell crystals!

Any chance I could get an address and phone number for the appropriate HP office that sells crystals?

Thanks - Bry

> tuning slugs frozen. Is there something I can spray, squirt or drip dow onto
> the slugs to free them without harming the paper coil forms?

I've tried heat and found it to work if you don't get carried away.
If the slug has a hex hole it it, put the tip of your soldering iron
in it, plug in the iron, let it heat up a bit and test the slug for
looseness every now and then. It seems that the wax in the paper hard-
ens and locks the slug in place. Just keep the torque down with that
wrench or you'll be shaking pieces of ferrite out of the form.

If the form is paper, you can try to loosen the slug with a solvent
such as Gunscrubber, etc. If the form is plastic, don't use any
solvents unless you test it on a junked one first.

The other times I've found slugs tough to loosen is in Asian assembled
gear where they sometimes lock the slugs with some kind of cement. Ace-
tone will loosen it, but one must be very careful the solvent doesn't
attack the coil form.

Any other ideas?

# 3422. RE:75S3 Mechanical filter

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-03-05 00:00:00 UTC
From: Young Kim <K6hm@wenet.net>
Message-ID: <34FF98E8.2D27@wenet.net>
Source record: 109016

Hello,
The 75S3 receiver has no option filters so the stock filters are,
455Y21 --- 2,1 KHZ SSB filter
X455Q200 --- 200 HZ crystal filter for CW
There is no filters you can install except for the AM filter you may be
able to install if desired.
Between the Main tuning Knob and Emission knob under the Chassis, you
can see it through the perforated cabinet. Note that it is under the
chassis not above the chassis.
For the older 75S3B, you can see all the filters from the top as there
is no cover for the filters but later model 75S3B or C has the aluminum
cover for all the filters,
you have to unscrew two screws holding the cover to see inside.
I hope this will help you. Best 73's

Source record: 109022

I have a problem with my R-4C. It has lasted almost since I bought it in 1974. Serial number is 22077. The receivers is suddenly silent, but I have been unable to trace the fault. The only cure was to lift it up 10cm in the right hand frond corner and let it fall down on the table.

I am aware of possible wire break in IF coil, it was repaired several years ago. It seems that it is possibly some VFO fault now?

From: johnmb@mindspring.com
Message-ID: <34ff591c.5069277@news.mindspring.com>
Source record: 109024

For Sale:

(( BOTH may be seen at : www.mindspring.com/~johnmb/forsale.htm))

Conar Twins... All original, no extra holes, very nice condtion.
Transmitter works fine, and has very little use (I know! I fixed
some major wiring errors! :-) ). Receiver needs alignment. Both
have minor scuffs on the blue paint, but are in very nice condition.
Partial copies of manual. $100 + postage, or offer.

Heath HW17- Odd 2M Rig. Complete, all original knobs, looks
original inside. Has mobile mic (correct Heath unit). Will clean
up nicely. $60 + postage or offer.

Thanks for taking the time to read this.
John

Help! Can someone describe to me the location of the mechanical filters in a Collins 75S-3 (NOT 3A/3B)? A non-ham is trying to determine for me which filters are installed in a receiver that I am interested in buying. Unfortunately, I am not familiar with the 75S-3 and can't tell him where to look. Thanks.

Please respond via e-mail: DnsShrn@worldnet.att.net

I know that he was refering to a transmitter not a FoMoCo product. The
process of touching up a chip on a car door edge is the same as
touching up a chip on a cabinet edge AFA the prep work goes. There are
likely to be more people that are knowledgable on the subject in one
of the auto ngs than in r.r.a.b. and r.a.r+p.

BTW I am looking for a Ranger to add to my ba collection.

I answer to BA only, I deleted answer to other groups

I love my Collins R-390A because
It is a Collins, and maybe we are like the Bike people with their Harleys.
It performs as good (or better) as any modern rig.
It is younger than me (smile), I could not get it when I was young, but finally I got it new in the box direct from the army stores. Doesn't it sound like a retro love story?.

If somebody does not understand the text above, I wonder why he/she is publishing in BA, maybe the problem originates in the crossposting, if the first poster sends to rec.ba and to rec.cb.redfox, maybe that is the origin of trouble.

So maybe it is better not to crosspost, or dont worry about answers meant for other groups, or as somebody told "Don't explain so much, let then die ignorant"

The IEEE version ought to be available via any library. I've just got my hands on a volume of copies of papers presented at an HP internal symposium held in Idaho in 1996, and voila! there is Rick's paper. (sometimes interesting things take surprising amounts of time to percolate around organisations).

I'm impressed with this thing. This is very clearly not the sort of circuitry that could have been arrived at intuitively. Intuitively it looks like it ought to decompose into an attempt to lift oneself by the bootstraps, and have all the putative benefits cancel out and vanish. Only by following through the derivation from an oscillator corrected by a lock-in loop surrounding a crystal-bridge notch filter, and following the network synthesis maths, can it be seen that there is a genuine net benefit. This sort of item can only be invented by someone with either an amazing amount of perseverence to fold a concept through several transformations, (or by someone with a strangely warped mind!)

Cheers
David

Mike: I love this kind of question! I vote for the Hallicrafteres
HT-37. Matched with a Drake 2-B, this was a truly classic station
from the 1960's. Check out the QST's from the era - You'll see lots
of these combos. The Drake 2-B and its 2BQ multiplier and speaker
fits PERFECTLY on top of the HT-37 (put a muffin fan on the TX).
80-10, CW, SSB and AM. There are lots of them out there. Good
Luck! 73 Bill N2CQR

Lane, KM3G

I was curious as to why your recent ads are always "tripled" - printed in three identical paragraphs. I also wondered about the date being 24 hours in advance of "real time". Does this keep your three ads at the top of Boatanchors for an extra day?

My real question to you is : Has this been effective, and helped your sales? I have some BA junk, and was thinking maybe I'd hitch-hike on your method,and maybe print FIVE messages identical, and move the date ahead several days. Maybe we should all do this.

As one ham to another, what do you think of this? I'd appreciate any comment. I have a thick skin and don't mind being flamed, so fire away.

Hi Mike
The cabinet is very easy to do. Sand it, clean it, prime it, lightly
fine sand the primer and then spray it with either the paint that you
get or I like to use Automotive paint that is easy to find. The match
for
the Johnson cabinets is Plasti-kote CC9090. It looks great and it takes
30 minutes from start to New Ranger again. 73 Chris

Hello to the Group:

I hope the group will pardon my breach of boatanchor qualifications.
In my search for this first manual.

In bad need of the following manual, a Lafayette HA-600A. It is a
communications receiver.While technically a "BoatAnchor". It sure
weighs enough to qualify.

Also need a Riders or some other service manuals for a SR-46, SX-53A
and a HT-18. All Hallicrafter tube rigs.

Thanks
Bill

Message-ID: <35003D78.1E46@cswnetNoThanks.com>
Source record: 109052

I also figure you'd go with the HT-37. Sure they don't match
physically, but they go together. The 2B was an SSB receiver so you
need an SSB TX, I guess... The 2B and HT-37 would have been my dream
station in my mid-60's boyhood ...

I think the 2B predates the time when RCVR and XMTR needed to match.
Being a CW guy, I've been using mine with a Drake 2NT, DX-40, DX-35,
SONAR CFC (5 watt exciter from 1948), and expect to settle on my HT-40
eventually for my classic station. Add in my VF-1 VFO and you've got a
real clash of styling. But I love it anyway!

Hey--Has anyone added VFO to the 2-NT?? Despite what I said above, it
does look good with the 2B.

Nick, WA5BDU

Anybody running a real old AM rig? I have a pair of used RCA Radiotron 805 tubes that were running in modulator service in an AM kilowatt I disassembled in 1960 (I think). I know they were in good shape then.

I'm cleaning out the junk box and thought I would see if anybody needs them before I do something silly with them - like make a lamp.

Does anyone have any information on what grid controlled rectifiers were used for?

I have 2 Eimac RX-21A and 2 Eimac KY-21A grid controlled mercury vapor rectifier tubes. They look like new condition, but - other than finding some old Eimac specs - I don't know how they were used. I do know that I have had them for over 35 years. (What a junkbox!)

I have for sale 1 R-392 receiver made by COLLINS. Unit is not 100%
operational,
works on 8 lowest bands. Bad bandswitch, tube, or alignment? I don't have the
time or space to repair it, so I'm letting it go for $150 plus shipping.(would
prefer pick-up).

I also have 1 R-390A made by EAC. It has no covers or meters. I think that
this radio is off frequency by about 1.5kc. It never bothered me so I never
bothered it. This radio has all the filters in it. I'm letting this one go for
$175 plus shipping(would definitely prefer pick up)

I'm located in the New York City metropolitan area. Will deliver within
REASONABLE distances.Please respond by email.
Thanks for the read, guys.(and gals)

The KY-21 is a thyratron tube. This is a hollow-state equivalent to an SCR. The RX-21 is a simple mercury vapor rectifier (Diode). They both have a PIV of 11 kV, and a current rating of 750 mA. THey would be commonly used together in a full-wave half-controlled bridge configuration, in equipment like motor speed controls, resistance welders, etc. Not of much value these days, except as a curiosity. They weren't very popular Eimac products, as most of the Thyratron/Ignitron market was dominated by GE and Westinghouse.

Hi. I need a manual for the original Ranger I transmitter. This is the earliest version without the "sequence keyer" deck. I'd prefer an original, but a good copy will do. I'll be happy to pay copying costs. Thanks.

Robert M. Bratcher Jr. <bratcher@pdq.net> wrote:
>Anybody have subscription info for the Glowbugs e-mail reflector?

Send an email to majordomo@priobaire.mines.uidaho.edu
and only write: subscribe glowbugs and you should be
hooked up.

Those of use who were subscribed to the old site were automatically
moved to this new site, without having to unsub then resub, so
I'm guessing it uses majordomo - might be listserv, though.

(For everyone else, the Glowbugs email list is devoted to
homebuilding transmitters and receivers with vacuum tubes;
lots of Hartley and regen brewing going on.)

I would also recommend the HT-37, however remember that if you
are not going to buy locally they were extremely heavy - about
90 lbs if I recall. However, I was a teenager then and maybe
it just seemed to be that heavy! I had mine with the SX-111, however
the 2B was a bit hotter rx.

Source record: 108901

Thanks for the response to my "stuff" for sale. I posted a complete list with prices at http://members.aol.com/ryoung9399
I had a tremendous response and most of the equipment is sold. In interest of fairness, I have confirmed to those folks that I am holding an item(s) for them and listed their first names next to sold on the item on the above web page. If you have bought an item you can reconfirm this way. I took sales FIFO.

I have not yet had the chance to unpack the QST magazines so I don't know how many of what years I have. I will try to do that the first part of next week. Also, I may find other small pieces of gear along the way.

Thanks very much for you support. Randy, KG5OH

Too many boat anchor projects !!!
Nice looking unit.&#65533; Front panel is very clean , no noticeable scratches. enlargement of ventilation hole on top to allow easy access to mike gain. Slight corrosion on chassis. Have had unit on 80mtr Am with good reports.
Xtal osc. can be sluggish at times, but works fine with VFO. I assume it needs a new tube.
Sorry but no manual
$80 plus shipping from 06419.

# 3501. Re: How do you free up frozen slugs?

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-03-07 00:00:00 UTC
From: Doug <doug@alpinet.net>
Message-ID: <35018D88.8176721C@alpinet.net>
Source record: 108906

Just for what it's worth......I use a 12 gauge wire, wrapped around the
tip of the soldering iron. Get it warm and then place it into the hole in
the slug, just dont let the slug get too warm. Try often to see if it's a
bit looser and can be adjusted.

No...this isnt a 100% fix, and if you get the slug too warm, it'll fracture
(cheap material). Also, once (if) the slug comes loose enough to work
with it, be sure to get it set right the first time, as it's liable to take a set

for sure after cooling of.

Good luck........I've been a tech for 35 years and frozen slugs are always
a shining frustration in this business.

# 3502. Re: What transmitter would go with a Drake 2B? (not 2NT)

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-03-07 00:00:00 UTC
From: n2ey@aol.com
Message-ID: <19980307182000.NAA09203@ladder02.news.aol.com>
Source record: 108907

What vintage rig to go with a 2B? It all depends on which mode(s) you want most. For SSB, you're better off with a vintage xcvr or "matched pair" setup anyway, so I'll concentrate on CW & AM. My favorites:

E.F.Johnson: Ranger, Navigator, Challenger, Adventurer

Heath: DX-40, DX-20, DX-60, DX-35

Eico: 720, 723

VFOs for rigs that don't have them: Hallicrafters HA-5, Eico 722, Heath HG-10, VF-1

External plate modulator: Eico 730

For a really neat vintage low power CW/AM setup, the Eico 720 xmtr with 730 modulator and 722 VFO can be a really nice setup. But the Ranger is my all-out favorite.

You might also consider building a vintage rig from an old QST or Handbook article. Many of the simple rigs intended for novices can be setup for VFO use and plate modulated. Turns one big project into three smaller ones. Email me for article suggestions if interested.

Bill, I know of no page devoted to old motorola stuff, would be
interested if you find one. When I was stationed at Keesler AFB, MS in
70 for my 2nd tour, I got ahold of old railroad vhf equip, via K5TYP
Amateur Radio club, and we had a ball converting them over to 2 mts.
Old sensicon recievers with 5 pipes etc. The trans were easy also. Got
hooked on a lot of that stuff, but don't have it anymore. Still got the
T.O.'s though.
At one time I was on 10,6,2,and 440 with old tube type motorola's
mounted in o.e. cabniets (6ft ers) and had a ball with it. Hope you
enjoy as much as I did. Oh, I'm 55 now so I was much younger then to

pick the stuff up. C U de Larry, WA1FIH

-> Subject: Re: Grid Controlled Rectifiers
-> Message-ID: <350083BE.96794DD@NOSPAM.carroll.com>
-> Date: Fri, 6 Mar 1998 23:16:15 GMT
->
-> The KY-21 is a thyratron tube. This is a hollow-state equivalent to an SCR.
-> The RX-21 is a simple mercury vapor rectifier (Diode). They both have a PIV
-> of 11 k V,
-> and a current rating of 750 mA. THey would be commonly used together in a
-> full-wave half-controlled bridge configuration, in equipment like motor
-> speed controls, resistance welders, etc. Not of much value these days,
-> except as a curiosity. They weren't very popular Eimac products, as most of
-> the Thyratron/Ignitron market was dominated by GE and Westinghouse.

Thanks for the info - however both the KY-21A and RX-21A tubes have "grid"
connectors on the side of the glass envelope - perhaps they were interconnected
in some sort of controlled rectifier circuit.

I would love to find an old circuit that used them just to satisfy my
curiousity.

Thanks,

Al - K8EUR

From: "Frederick M. Furland" <furland@ibm.net>
Message-ID: <3501d06a.0@news2.ibm.net>
Source record: 108919

I picked up a TR-3 with a hand held mike. There's no identification on the mike beyond the Drake logo. The mike doesn't work, so I need to rewire it (the wires inside the mike look like they were all clipped).

The switch inside the mike is a six lug switch with the name Standpole on it.

Any help on which wires connect with which lug?

Thanks,
Fred, KG0FT

# 3515. Collins R390A

Source record: 108920

Hi
I want some info on a Collins R390A serial 1.1xx.

The strange thing with it is that the audio response switch lacks the engraved function, just nothing around the knob.

The rig is mint and never used, so this is not the effect of some repair or the like, and I know about five rigs all with following serial numbers with the same "flaw".

Any sugestions?

Regards
Javier

This is a very neat 1950s vintage US Army radio receiver. It is the
R-174/URR from the AN/GRR-5. Covers from 1.5 MC to 18 MC in 5 bands.
It has several mechanical presets that are set using a special key
attached to the radio.

It needs a power supply - +1.4 VDC, -4.2VDC and +90VDC. I have uploaded
a couple of image files to my Web site:

www.sover.net/~mc/grr5-1.gif and www.sover.net/~mc/grr5-2.gif if you want
to see what it looks like. Its in excellent condition - I just did
an alignment last summer.

Price is $100.00 plus shipping. If interested please reply by e-mail.

73,

Michael Crestohl, W1RC

I have a Kenwood TS-820S with EXTREMELY low
output in the TUN mode. Everything else is working at
specs. I get full out put in CW and SSB.

How do I adjust the TUN mode?

Where is the adjustment?

I can't find a service manual, it is out of print and Kenwood
apparently either doesn't have one, or is not willing to copy
the one thay have as they used to offer.

I need to use this TUN mode to initially tune my amplifier
so that I don't blow something up or scortch it.

> Does anyone have one for sale or trade?

I believe W6KKT knows someone who repairs the probes. Your chances of buying a probe are almost zero. Repairing them is very difficult and requires special knowledge. The 4815 is a very valuable instrument, if the probe is working and the calibration is good. The probe is the "Achilles Heel".

Many radio amateurs who are into buying and selling equipment online have recently discovered eBay Auction (www.ebay.com/aw) as an alternative to the few newsgroups that permit equipment ads. For one thing using the eBay service eliminates the need of having to decide how to choose from multiple buyers which happens often, particularly when an item is priced low. An auction is an honorable and fair method of buying and selling. There are two classifications where radio equipment may be listed, one for collectibles and another for consumer electronics - radio equipment. I've seen Collins KWM-2s, National HROs, E F Johnson and other vintage gear on eBay. There are of course a multitude of categories covering just about every kind of merchandise and services you can imagine and the eBay site gets millions of hits from folks looking to bid on the goodies. If you are not familiar with eBay check it out!

The problem with putting items on eBay is that it has to be done while online, entering the required information in real time. Software developer John Slocum has produced an interesting program called AUCTION ASSISTANT 2.0, a neat front-end interface that alleviates the need to remain online while preparing your eBay auction ads. AUCTION ASSISTANT also tracks the auctions right to the conclusion of the transaction.

AUCTION ASSISTANT makes it extremely easy to prepare an attractive ad including adding image files. The program will upload the image file to your ISP's Web FTP site and include the photo's url in the body of the ad so prospective bidders can view it on eBay. No knowledge of HTML is needed and once configured, stock messages such as payment and shipping terms will be included in every ad. The program will track many auctions and bidding information can be updated every time you log on to eBay. Once the auction is over AUCTION ASSISTANT automates correspondence with the high bidder and even posts feedback to their records once the transaction is satisfactorily completed. You can then mark the auction items as inactive and keep the information for future reference.

AUCTION ASSISTANT works in concert with your Web browser and allows you manage of all your auctions with little effort. There are item search features as well as links to predefined sites such as Blackthorne (AUCTION ASSISTANT's developer) UPS, FedEx and other useful Web resources.

The program is well thought out particularly the configuration screens. Documentation is complete and includes a tutorial to quickly teach users how to use it efficiently. The only thing I found a bit discerning is the fact that the main screen doesn't fit well when running 800X600 in the large font mode that some of us old pfartz prefer. The main screen has a lot on it including an image preview area and it would appear that it

really needs to be run at 800X600 using small fonts.

AUCTION ASSISTANT 2.0 is shareware. A full-function demo may be downloaded from the Blackthorne Web site (www.cyber-quest.com/home/jslocum/bt/. The demo has a limit of two auction items but otherwise is complete. Should you decide to register you will receive a key number that will unlock the the complete program. Registration costs $29.95> Download the order form from the Web site, mail a check or money order and the registration code code will be returned by e-mail.

Note: I have no connection with either eBay or Blackthorne - just a very satisfied user!

Hi Scott......just looking at my maintenance book here, but all I see is the prints for the PB-1315, which is later than what you have. But, after 20+ years of repairing FT101's, I can say I'd be looking at the audio IC, AN-214. If you can come up with an extender board for it, the work is far easier. If I can find one of the older schematics, I'll drop you a note.

73 and good luck.

There isn't a "tune mode" adjustment. When in tune mode the screen
voltage on the finals is halved by a voltage divider in the power
supply. What has happened is the divider is open. I am at home and don't
have the designators but look at the schematic for 2 56k resisstors in
the power supply board. If you can't find them then e-mail me tomorrow
and I will look them up.

>
>--
>Denis Sharon WA2NBU Ridgefield, CT
>

Denis:

The filters the the 75S-3 are located on the underside of the chassis.
The 75S-3 should have two filters installed - the round filter is the 2.1
KHz SSB filter and the large rectangular filter is the 200 cycle CW
crystal filter. If you're lucky it'll still be there. Some of those
disappeared and found their way into 75S-3B/C although they would have to
be soldered in of course.

Good luck with it! The 75S-3 is a very good receiver considering it came
with the 200 cycle filter as stock.

I have used eBay 20+ times and feel that it is a great way to buy or sell at a fair and reasonable price. I have yet to be disappointed as either a buyer or a seller (I know it can happen and probably will eventually, but all-in-all, the percentages are good).

However, I can see how the folks who buy an item, say an HF rig, at $800 or so and a year or two later want $750 for it might be disappointed in an auction environment. And, at times, an item does hold it's value that well. But not often.

# 3568. Re: What transmitter would go with a Drake 2B? (not 2NT)

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-03-08 00:00:00 UTC
From: Michael Black <blackm00@CAM.ORG>
Message-ID: <Pine.GSO.3.94.980308183738.4037B-100000@Stratus.CAM.ORG>
Source record: 108873

The idea of building a matching transmitter is a good one, especially
when you consider that the vfo and dial always are one of the more
difficult things to do well. And using the heterodyne crystals in the 2B
sure will save money.

I don't remember seeing a homebuilt matching transmitter article, though
it was common years ago to see people build things in matching cabinets to
complement commercial equipment.

But someone did write an article about building a solid state version of
the 2B. I can't remember if the article said it was a copy, but it sure
looked a lot like one, and it did use a 50KHz LC filter for selectivity.
It was in 73, I'm pretty sure in 1967 in the fall. I have it somewhere
around here. It was also reprinted in a TAB book that was a collection of
construction articles from 73; I have that somewhere around here too.

HQ-129X For Sale. Very Good Condition. One of the better looking ones I've seen, just have no use for it right now and need the space so, it can be yours for $200 + shipping from San Francisco 94105. 73's, Jack

# 3579. HP 4815A Vector Imedance Meter - need probe

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-03-08 00:00:00 UTC
From: Terry Perdue <terryp@halcyon.com>
Message-ID: <01bd4a31$a3606b60$0c203fce@default>
Source record: 108932

I took a chance at a hamfest, and bought the box sans probe, hoping someone might have one available. It looks like I'll need more than that, since I'm getting no RF out, and don't have a manual, but finding a probe is the first step. Does anyone have one for sale or trade?

Terry

# 3580. Collins 75A4 with speaker

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-03-08 00:00:00 UTC
From: tonalee55@aol.com
Message-ID: <19980308021801.VAA03294@ladder03.news.aol.com>
Source record: 108933

Hi - and thanks for reading. This receiver is part of the estate of a silent key. It is exceptionally clean and cosmetically near-perfect. I turned it on and it seems to work fine - though I can't make any guarantees. The serial number is 2121, the SK was the original owner, and it comes with the manual. It does not have the vernier knob (I'm told that was an accessory for this serial number) and has just the 3.1 mechanical filter although I notice there are holders for all three slots. I have not seen the speaker yet (it is being shipped to me) so I can't comment on it cosmetically although it is the Collins speaker for the 75A4. I really don't know the going rate for something like this but based on what I have seen in the newsgroup I'll list it at $695 plus shipping. If that seems high, please feel free to make an offer. 73. Pat, W7YCN (360-432-1114 if you'd like to call)

: >>--
: >>Mike White, N4PDY
: >>m_white@juno.com

Got my first 2B in 1964. Still regret Drake never made a companion
transmitter.

The elegant answer is to build an SSB/CW transmitter in a 2B cabinet using
the 2B LO and Het Osc signals so they function as a transceiver.
Beauty is no oscillators in the Tx except the carrier xtal, so no
differential drift.
Then xtal the 2B for 160 and WARC and you're really set for life, BA
speaking.
I will do this if I live long enuff...

In early 70's, a ham built a CW only transmitter in a 2B cabinet with VFO
and controls arranged so that it looked very much like the 2B. But I can't
find the article!

Nav 25W out. Ranger 35W out.

A real neet sleeper is the Elmac AF-67. 40W out 160-10M. I use mine
all the time. Kinda looks like a 2B, too! Well, not really...

Have fun...

Hi again Bob,

I forgot, on manuals: try HI Manuals. They are advertised in CQ and
QST I think. Never have been impressed with Kenwood's factory
support organization, from high prices and horror stories I have heard
over the years. Fortunately, the TS820 is not only rugged, it is
REPAIRABLE.

73,
Don, W6JL

## 3594. '38 Zenith Deco

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-03-09 00:00:00 UTC
From: Bill <wmartone@worldnet.att.net>
Message-ID: <6e23ia$if5@bgtnsc03.worldnet.att.net>

I have for sale a complete and VERY nice James Millen
90651 SN E377 Feb. 1960 Grid-Dip Meter. It is all original
all the coils for 1.7 MC to 300 MC. MCs remember them??.
This unit works and is very accurate for its vintage.
All the coils are in the Millen metal rack holder still with the
millen label on it. The original manual and also the original
box. Make me a offer or find me a KW modulation transformer.
I will take offers until 5:00 PM PST on Wed the 11th. Larry B.

As I said, we are *making* oscillator and crystals (for internal
use) but don't officially *sell* them separately. If you want a
crystal, you would have to cannibalize an oscillator, as
oscillators are the lowest level replacement part. Since we've
made over 100,000 10811's, there should be plenty of used ones
around. But then why would you want just a crystal anyway?

Hi Bob OM,
Probably just an open resistor in the screen voltage divider,
which sets the power level for tune. There is no adjustment.
I never use tune mode on my TS820. Just tune it up per normal,
nothing will blow up. Trust me, I been using mine for 18 years
now (still original 6146's; they can last a lifetime with care)!
You can also use the FSK position,and tune it up for about 110
mA plate current, about 40 watts out. The rig has auto power reduction
for FSK operation. It is an excellent rig for all modes, including
AMTOR/PACTOR/RTTY. I would not part with mine.
Vacuum tube finals are not persnickety like solid state ones,
(damned hard to short the 'collector' to 'emitter of a 6146). The
pi network output allows vastly greater tolerance of (and matching
capability to) high SWR loads than the auto-shutdown SS final amps.
Enjoy!

73, Don, W6JL

Other than being a software pitch which I will not repeat, will make some comments from a buyer's perspective:

1) To get a good deal you used to have to bid in the last minute. The frenzy has abated a bit so the last hour may do.

2) As yet I have received exactly one radio in which the cosmetics lived up to the description. If a station can be heard reguardless of hum or distortion, "it works".

3) Assume that the seller knows nothing about the radio and will assume that the toggle switch rammed through the back cover or the 1/4" phone jack mounted on the side (and not visible in the *PIC*) is original.

4) ALWAYS ask about shipping before bidding. Some vendors seem to make their profit from "S&H extra".

5) Cracks, reguardless of size are "barely visible".

6) Digital cameras hide A Lot.

7) "Modest" reserves aren't.

If you are really serious about buying on E-Bay, write down this URL: 129.6.16.35 That is the network time service from WWV. Set your system clock on every boot. Next get one of the "Cricket" programs which will place your bid in the last 30 seconds of an auction. Decide what you think an item is worth. Divide by two. Subtract the shipping quoted in the seller's response to your E-Mail. If result is above zero then program the Cricket. Ignore the web page. You will get E-mail if you bought the turkey. Do as I say, not as I dood 8*).

I have for sale a very clean, full output Kenwood TS-820S transceiver
with optional CW filter installed.

For those who are not familiar with this unit, it is a fully self
contained 100 watt transceiver covering 160 to 10 meters, SSB or
CW. This unit does not have WARC bands or gereral coverage receive.
It operates from 110V AC and has all power supplies built in.

The unit has digital display (green flourescent) and is all solid
state with the exception of a PA driver tube and a pair of 6146's
in the output. THe unit has Pi-net output, meaning that unlike newer
rigs with a fixed 50 ohm output, will match antennas having impedances
of 50 to 75 ohms.

Asking $350, and I Am located in Southern california.

Any questions, just ask..

Thanks for reading.

---
From: William B. Ross[SMTP:billross@txdirect.net]
Sent: Sunday, March 08, 1998 5:41 PM
To: Old Tube Radios
Subject: A Tribute to A Master Boatanchor - W5PYT Bob Hohertz

It is with heavy heart and fond memories that I learned on this net last
evening of the passing of W5PYT, Robert "Ozona Bob" Hohertz of Ozona,
Texas. Bob was not a member of this net but there was no more avid
collector of boat anchors or proponent of tube based equipment than he.
He was not a collector. He assembled the tremendous collection of
receivers, test equipment and transmitters that he owned because he used
them, every day. They were each and every one a friend about which he
knew in intimate detail from the time it was first purchased until it
came into his possession. Operating from what was once an Air Force
base, his station occupied a one storied concrete block transmitter site
now owned by a gas company for whom he worked for over forty years.
>From this station he supercharged the ether on the 75 meter band with
both his wit and wisdom on pure AM for most the past twenty that I know
of.

I have visited Bob on many occasions because we shared a passion for
the old gear we knew from our first days in amateur radio and he could
expound for hours on the beauty and features of a particular receiver as
well as the rotten design of another. He had a wall of receivers,
ranging from Ameco and Morrow convertors to Hallicrafters, Racal, TMC,
National and Collins; each and every one of which was fully operational
and superbly aligned. One receiver that he does not have is a National
NC300 which he gave to me one evening simply because I expressed a
desire to own one. And his transmitters were legion, ranging from Tech
Rad, a Johnston Killowatt and a BC610. The last I checked he had six
32V transmitters of various generations.

If any man was a radio institution, it can surely be said of Bob
Horhertz. Although well into his 70s, his every memory was expertly
cataloged, the subjects and facts indexed and cross referenced perfectly
to be recalled instantly whenever required. He could remember dates of
manufacture, model numbers, part numbers, specifications and shipping

weights of a broad array of communications equipment and assessories and could recall the place, date and time almost to the minute that he had seen, acquired, or worked on one. And he knew that no matter how fine or large your transmitter, or how fine and sensitive your receiver, you could never be heard and you could never hear without a good antenna. So Bob had five acres of antennas, the surface upon which he had laid out and pinned down miles of #2 aluminum wire to serve as a ground screen above which he erected beams and wire designs of every possible shape and configuration until he knew each and every one of its capabilities and weaknesses.

And he was generous. He never failed to offer a nights rest for a passing visiting fireman and you could not leave until he had taken you into the heart of Ozona for a chicken fried steak covered in cream gravy.

Ozona Bob will be missed by a multitude of people but we hams who value the old gear and the old ways sense a particullarly great disturbance in the Force with his passing. He was an institution of all the good things in BA land. After all, even his name meant High Frequency.

Thanks for reading. I am looking for a Globe VFO (755, I think) for my Globe Chief 90A circa 1958. I want to be able to set it up like it would have been if I had the money when I used the ARC-5 as a VFO in the 50's and 60's. Restoring my old 90A, UM-1, and found a Drake 2B to go with it. 90 watts full plate modulated AM and CW. I can almost hear the relays clanging.

If you have one, please e-mail with price and condition.

Al Waschka

I don't have a problem with Ebay and have used it. I do have a problem
with reading post after post on a newsgroup advertising For Sale (FS or
WTS) and then finding out it is on ebay. If it is for sale then post it,
if it is at an auction leave it off the newsgroup, I will see it.

I've found that with few exceptions - the "last second" bid thing seem to have gone away - too many people were getting "shut out" at the last minute because of system loading, etc. - now bidding seems much more "routine".

> 2) As yet I have received exactly one radio in which the cosmetics lived
>
> up to the description. If a station can be heard reguardless of hum or
> distortion, "it works".

I guess I'm lucky - _every_ radio I've bought on eBay has been as described or better - 'course knowing who you're dealing with goes a long ways towards that end - I've bought radios from Armond Gould, Harry Poster, Don Wall and several others - and all have been quite accurately described. And I've bought some fairly pricey stuff on eBay as well (well - maybe not for some of you but for me $1500 bucks ain't pocket change). - And in that auction - I trusted the seller completely - even though it was his first eBay sale. But he was very responsive to questions - his opening price was fair (no reserve) and I bought a B3 (A100 variant) on eBay. Frankly - if someone told me a couple of years ago that I'd find a B3 at a reasonable price on the Web - I'd of shook my head uh-huh, winked and gone on about my business. But after lusting after one for 30 years - I've got a great sounding B3 / 122 leslie not 20 feet from where I'm sitting - no more pestering friend to use their organ - or running down to the Temple Theater to play the pipe there.

> 4) ALWAYS ask about shipping before bidding. Some vendors seem to make
> their profit from "S&H extra".

A _very_ valid point! I almost bid on an item - noticed nothing about shipping - emailed the seller - and upon his reply decided _not_ to bid anything he offers - easy way to avoid a RIPOFF!

> 6) Digital cameras hide A Lot.

Also (almost) very true - all except the high end Polaroid, etc. ($12,000 - $16,000) don't have enough latatude, nor resolution to provide an "honest" picture... That's why we either scan an item - or if it won't / can't scan well - 35mm film then scan... The buyer deserves that effort.

> 7) "Modest" reserves aren't.

Reserves suck - That is the one thing about eBay I don't like. Sellers should set an acceptable opening "offer" (minimum bid) and live with it.

> If you are really serious about buying on E-Bay, write down this URL:

> bought the turkey. Do as I say, not as I dood 8*).

Hey - I just bid what I'm willing to pay - and forget it. On the B3 - I opened at $1500 - and after I had secured some funds (borrowed from everybody in sight!) I raised my bid to $2000. No one raised the bid. I bought a B3 for 1/3 of what they go for around here - and it's in Excellent condition - both cosmetically - and sound?? - I ain't no Booker T - but my Green Onions weren't half bad - and now they KICK!
Point is - there are some bargains to be had on eBay - ya' just have to be patient (and a little lucky!!).

Another wierd item I bought on eBay - I served in the Navy for a while - worked on Boomers. I'm trying to get / build a model of every class boat I worked on --- I found a new / unbuilt kit of the Andy Jackson (SSBN 619) - on eBay. Been trying to find one for years. About a year ago I did finally find a model of the Pat Henry (SSBN 599) from a model dealer that specializes in old kits. - cost me $40 +S/H. The Andy Jackson kit is a larger / much more detailed / better kit - and there it was on eBay. How much did I get jabbed buying that kit on eBay???? $36. _Including_ S/H. Boy I really got taken on eBay!!! (Throw me into that briar patch!). Obviously - having just paid $40+ for a kit - I set my opening/ only bid at $40. It started at (I think) $5. and over the week the auction ran - it got bid up quite a bit - but when the auction closed - I had another kit. (it's about half assembled on the table right in the middle of my office - I've been painting - detailing it for about a month - It'll probably take two more weeks to finish it... it is a BIG kit (1/200 scale)... But here again - where else would you find such a kit - even the dealers hadn't found one - and I know they would have charged a lot more for it if they did... (the same dealer I got the 599 from had a 598 as well - since the George Washington was the first boomer - the box and graffics are as collectable as the kit = and it is (except for markings ans box) the same kit as the 599 - yet he wanted $75 bucks for the 598 - nearly twice the price of the nearly identical 599 - so obviously I bought the 599. Heaven only knows what he'd have asked for the 619 - which is almost 30% larger... So the bidders all seemed to have a pretty good idea of what the market was for the kit - and no "bidding frenzy" ran the price past that point.

So how is it that eBay favors the seller? If people don't bid - the seller sure as heck ain't making anything! So if a 20 Big Box sells for twice what they "usually" bring at a swap meet - then I'm going to start

buying everything in site at the next meet I go to - and after the frenzy on eBay - I should be able to retire! What a plan!

best regards

Hi Dennis,

The crystals that everybody used in those Gooney Birds were 8 Mc rocks. The ocilllator doubles then triples in the buffer and drives the final straight thru at 50 Mc.

The frequency 50.4 is a popular one for am nets. Get an 8400 kc ft 243 rock which multiplied by 6 = 50.400 You can use other 8 meg xtals also, but you need an adapter for the pin spacing. These are redily available on the use nets, though not as cheap or common as they once were.

Thats a fun rig, and with the upswing of sunspot numbers, don't be surprised next winter to work four or five continents with that mighty 6 watts am output!

Hello to all...
kf6gkn/Jon in Ceres Ca.
Thanks to Nick England for a very informative FAQ page. I learned alot!
I have an old Hallicrafters HT 37... vintage 1956. Also have tons of
questions and am willing to direct these to the group (if it's ok) or to
an individual if this is best. Guess I need to get the book first (many
might suggest a dictionary) so I'll start there.
In the interum anyone out here who could give me a little background
info on the 37, please do!!
thanks in advance.
Jon

For Sale

WWII aircraft receiver BC-348H. Made by Belmont Radio. Cosmetics are very good to excellent. I believe the front panel may have been repainted, it IS the correct black wrinkle, but it doesn't have any nicks or dings in it, may be a depot refurb job. Front panel is all original with no extra holes, knobs, etc. Has all original knobs, one of the spring loaded covers for one of the headphone jacks is gone, other one is there.

Has an internal AC power supply, built on a dynomotor mount and mounted in the dynomotor spot. One small hole in the rear of the cabinet for the power cord to exit.

I have tested the power supply and it works fine. I have not tried applying power to the radio, it should be recapped before it is powered up.

This is a very nice BC-348. No shock mount.

$80.00 plus shipping from zip 93401. Thanks.

No, he is in fact posting to the right groups. This net's anthem is also
to formulate restoration techniques for BA equipment and touching up is a
commonly asked question (albiet not an FAQ).

Now to answer the question:

> >Also, this Ranger has a few tiny chips on the edge of the front panel. I
> >know of the guy who sells the touchup paint. Any advice about how to touch
> >it up so it doesn't look awful? How much to thin the paint, what kind of
> >brush to use, do I buff, that sort of thing.
> >
> >Thanks.

Hi Mike:
The most important thing about touching up that Ranger is to find the
right matching paint (correct hue and luster). I used this technique to
apply to a 312-B5 with a worn spot on the front panel. Using a
coincidentally matchng finish (Testor's battleship gray) I was able to put
it with good results. I used a clean rag and dabbed on the paint to the
surface. But the problem is amalgamating the paint to match the finish.
One way to do that is to buff the original surface along with the newly
(but dried) paint with a compound like Brasso. But do this lightly and
sparingly. Too much and you can take off the new paint! Follow up with
cleaning the rest of the panel using a cleaner like Meguire's. Usually the
sheen of the finish will tend to combine all together. O.k. Take it easy.
Hope this helps. Cal, N6KYR.

# 3623. COOKED TRANSFORMER?? HELP!!

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-03-09 00:00:00 UTC
From: Rick Williams <williams@brunnet.net>
Message-ID: <350469db.0@198.164.187.20>
Source record: 108729

I decided to de-nicotine my Hammarlund HQ-140X over the weekend. I used a couple of toothbrushes and Fantastik cleaner. It removed all of gunk and grime. The front is pristine and the insides look new, except for a tiny amount of chassis corrosion. Here's the problem. I applied a liberal amount of cleaner. Rather than wait a few days I had to plug it in the same day I cleaned it. At first, it wouldn't receive and a hum came through the speaker. The next day it worked fine with one serious exception. After the radio has been on for 4 or 5 minutes a rotten smell starts emanating from the large transformer on the back right corner. After 3 or 4 more minutes, a very audible sizzling starts up from the same transformer, although the receiver still seems to be working. At first it blew the fuse, but now it just cooks away. Any theories on what's happening? Could Fantastik have penetrated the transformer and will time cure it (or am I screwed)? Thanks.

Rick Williams, VE9HF.

Why do you think they have a tune mode? Very stupid question why is the
output EXTREMELY LOW. You don't operate it in the tune mode. You tune it.

Heathkit HW-12 Transceiver. Single band, 75 meter SSB rig.

Visual inspection showed L4 missing, and two or three other components
are placed in the pcb but unsoldered. I suspect a prior owner was in the
process of repairing the rig. I don't have L4, and I don't have any
interest
in spending the time to fix this thing, so here goes:

I will sell the transceiver with HW-12A (note suffix) manual as-is
for $55 shipped from Detroit area (it's pretty light). Or, part it out
as follows:

Front panel $10
Enclosure $10
Set of Knobs $10
Set of Tubes $10
Manual $10
PCB w/ components $10
Meter $10

Add $3.00 shipping for each.

My preference is to sell it as a single unit.

Cosmetically, it all pretty nice - not mint, maybe an 8 or 9. No
extra holes, no mods that I can tell.

Thanks.

Hi Jim,

Look to see if the slug is cracked with a magnifier or microscope.
If it is, you have big problems as they will bite into the paper form as you try to rotate them. I have ground some of these out carefully with a diamond or carbide burr in a Dremel type tool.

Almost any type of lube will tend to soften the paper and could make the job more hairy. If the slug is not cracked this might work.
Maybe a contact cleaner applied lightly. Use a metal allen wrench when you are moving the slug. Good luck.

Anyone know of mods for the SB-200 that will let it load up and operate on 17m? My dad has been able to get about 400 watts out of his SB-200 on 17m without doing any mods; is there a way to get it to load up to full power on 17m?

Thanks & 73,

-Marty KI0LO

Hi OM,

Both Newark Radio and Digi-key offer these in their catalogs.
Newark Radio tends to have the more complete stock.

From: William B. Ross[SMTP:billross@txdirect.net]
Sent: Sunday, March 08, 1998 5:41 PM
To: Old Tube Radios
Subject: A Tribute to A Master Boatanchor - W5PYT Bob Hohertz

It is with heavy heart and fond memories that I learned on this net last evening of the passing of W5PYT, Robert "Ozona Bob" Hohertz of Ozona, Texas. Bob was not a member of this net but there was no more avid collector of boat anchors or proponent of tube based equipment than he. He was not a collector. He assembled the tremendous collection of receivers, test equipment and transmitters that he owned because he used them, every day. They were each and every one a friend about which he knew in intimate detail from the time it was first purchased until it came into his possession. Operating from what was once an Air Force base, his station occupied a one storied concrete block transmitter site now owned by a gas company for whom he worked for over forty years. >From this station he supercharged the ether on the 75 meter band with both his wit and wisdom on pure AM for most the past twenty that I know of.

I have visited Bob on many occasions because we shared a passion for the old gear we knew from our first days in amateur radio and he could expound for hours on the beauty and features of a particular receiver as well as the rotten design of another. He had a wall of receivers, ranging from Ameco and Morrow convertors to Hallicrafters, Racal, TMC, National and Collins; each and every one of which was fully operational and superbly aligned. One receiver that he does not have is a National NC300 which he gave to me one evening simply because I expressed a desire to own one. And his transmitters were legion, ranging from Tech Rad, a Johnston Killowatt and a BC610. The last I checked he had six 32V transmitters of various generations.

If any man was a radio institution, it can surely be said of Bob Horhertz. Although well into his 70s, his every memory was expertly cataloged, the subjects and facts indexed and cross referenced perfectly to be recalled instantly whenever required. He could remember dates of manufacture, model numbers, part numbers, specifications and shipping weights of a broad array of communications equipment and assessories and could recall the place, date and time almost to the minute that he had seen, acquired, or worked on one. And he knew that no matter how fine or large your transmitter, or how fine and sensitive your receiver, you could never be heard and you could never hear without a good antenna. So Bob had five acres of antennas, the surface upon which he had laid

out and pinned down miles of #2 aluminum wire to serve as a ground screen above which he erected beams and wire designs of every possible shape and configuration until he knew each and every one of its capabilities and weaknesses.

And he was generous. He never failed to offer a nights rest for a passing visiting fireman and you could not leave until he had taken you into the heart of Ozona for a chicken fried steak covered in cream gravy.

Ozona Bob will be missed by a multitude of people but we hams who value the old gear and the old ways sense a particullarly great disturbance in the Force with his passing. He was an institution of all the good things in BA land. After all, even his name meant High Frequency.

Perhaps sellers that use eBay should agree to incorporate the letters BA in some form in their listings headings. I shall use [BA] to facilitate searching.

There are two categories on eBay that BAs would fit into. One is under collectibles and the other under miscellaneous. The radios category under collectibles contains over 20 pages pf listings whereas the radios under miscellaneous, electronics,consumer,radio usually has far less.

>what the model # is for this beast? It only seems to say Knight on the
>front panel. It has a Q multiplier, ANL, etc.

I am a Knight-nut and here's what I think is correct based on the
ads and catalogs and the 6-7 receivers I have - additions or
corrections are welcome.

Sounds like you have one of the R-100 models. The original version had no
model number, just the catalog order number Y-726.

This was made in two color schemes, early - tan with chrome trim,
and later- grey with chrome trim. The Knight logo had vertical lettering.

The Knight logo was changed to italic (slanted) lettering later and this was
advertised as the R-100. The grey/chrome paint scheme was unchanged.

Later the front panel was revamped with a two-tone chrome and grey scheme
plus new knobs - to match the T-150, T-60, R-55 series of gear. The antenna
trimmer control was moved from upper center to lower center.
This was the model R-100A.

I believe all these rigs were identical under the skin - the same PC board
was used in all of them and the only changes were cosmetic as far
as I can tell.

Look at http://www.mindspring.com/~johnmb/nick1.htm and you'll
see an R-100A and tan Y-726 in the background.

As I said, more info or corrections are welcome.

Note that AUCTION ASSISTANT works in Netscape but the author says it
sometimes works, sometimes not, in MSIE. He has a test version for MSIE
but the ftp address he gives for it was reported "not found" at midday
Monday. (I left Blackthorne a note.)

FWIW, I've spent 6 to 12 hours a day on eBay for the last 2 weeks studying
it, reading its Support and Wanted message boards, and following a few
hundred auctions large and small. While there are problems, it appears to
be running way over 90% on the plus side.

By FAR the largest problem is bidder and to a lesser extent, seller,
laziness followed by stupidity. Easily 50% of the complaints are due to
simple failure to read eBay's docs and 20% are failure to understand them
despite their being clear and concise.

Folks trying to make a living selling 'beanie babies' to each other
dominate the public message boards, but their confusion and haggling has
zero carryover to folks buying or selling the gear we are interested in.
Seldom are complaints or questions posed about higher ticket collectables.

At every moment this week there will be 400,000+ auctions underway at eBay.
If the last two weeks are any indication, only about 200 of them will end
in less than 100% good will.

The reasoned argument posted here that sellers have an edge is, IMO, not
only correct but intentional and proper. Why in god's name would a someone
place his item for auction on eBay if the buyer had an edge?
From what I see, this edge is less than the poster suggests. For example,
a seller who refuses to sell to the high bidder opens himself up to being
kicked off eBay plus legal action by the buyer, should the buyer choose.
A buyer doesn't have to follow through on those to get benefit from them.

From what I'm seeing everyday, there is far more bending over backwards by
sellers to accommodate buyers than ... bending him over, as it were.

# 3658. 80 Years of QST

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-03-09 00:00:00 UTC
From: Terry@electrosys.COM
Message-ID: <c=US%a=_ecs%p=ElectroSys%l=WEBMASTER-980309191141Z-205@webmaster.eletrosys.com>
Source record: 108779

For those who are hams, there is a new series of CD-ROMS being made for all 80
years of QST from 1915 through 1994. This is NOT a condensed effort but is a data
base driven imaging system finely indexed for easy lookup and has every ad, every
advertisement, every page from front cover to back cover including inserts. Now available in sets of 5 or 10 years starting 1940 through 1994. 1960 and forward in time are in 5 year sets. 1959 and backwards are in 10 year sets. Check the details from the guys who are producing this series for the ARRL. Now over 15,000 users worldwide on this series. http://www.electrosys.com/cds.htm

For informational purposes - a great resource of antique radio, radio in general, ham radio and for use by anyone interested in the art of radio. If you haven't looked into
this, by all means do so NOW !

What's wrong with this newsgroup? We spend more time discussing the good or bad points about eBay than discussing radio!

I wouldn't buy the shareware because I know what I'm going to say before I list on eBay.

eBay is a great place to buy and sell. There are problems like people don't know what hey're buying and don't get what they wanted. We find some buyers putting in sky high bids then not being willing to honor the bid. 95% of my deals on eBay have gone very smoothly and with satisfaction on both sides.

# 3660. Re: If you use Ebay Auction you might find this interesting!!

Who is a Spam-meister shill? Many guys I know are using eBay to buy and sell stuff. That's what it is for. If you check out the radio related classifications you will see the e-mail addresses of many of the gang who frequent this newsgroup both bidding on stuff and selling there.

Spamming means the undiscriminating posting of messages to many newsgroups or e-mailing to a large number of addresses. I posted my message to three newsgroups that are actively involved in the exchange of radio equipment for the information of thise who might be interested.

I like the Auction Assistant program and use it. It is a good front end for eBay. If you don't like eBay, no one's forcing you to go there or even read auction postings. I feel that there is sufficient interest in these newsgroups to provide this relevent information.

I absolutely adored the Marauder--and not just because it was my first SSB rig (I think it was Heath's first SSB rig to have the SSB _inside_ the main box, wasn't it? There was a "Single Sideband Adapter" also made to go along with the earlier units in this series, as an outboard adapter, if I recall...). It was heavy enough to be stable--once it warmed up--and rugged enough to withstand a new General's ham-handed (no pun intended) attempts to dip the finals. I had great audio reports with mine and only let it go because I was moving into a grad dorm where it would be a bit hard to hide. My hand has twitched toward my wallet every time I've seen one at a hamfest since...but never dived in (yet!).

Enjoy!

I had some luck last night putting "and radio" after Hallicrafters,
Collins, National & Hammarlund in the search box.

Worked just fine!

bratcher@pdq.net
Record collector, 8mm, super 8, 16 and 35mm Film collector.
Looking for prerecorded reel to reel tape albums.
I like old radio's too.
Collins, Hallicrafters, National & Hammarlund are my Favorites!

Message-ID: <B7HM.5543$gg.3623890@news3.atl.bellsouth.net>
Source record: 108885

I have (2) R-392 receivers for sale. Both units work. One unit is quite clean. The other is ugly but works well (not a parts rig).

I am in Knoxville, Tennessee and would rather meet at some mid-point as ship the rigs.

I can attach digital photos if desired. Please reply via e-mail to - extrude@bellsouth.net

Thank you,
Mark - WB4TGB

If you are not familiar with eBay check it out!
<SNIP>

Thanks for the shareware info Mike. As for the strong feelings about eBay, I don't understand all the emotion. If you don't like the auction format, don't bother. I haven't seen anyone trying to force anyone else to use it.
I'm always looking for something, and will take it wherever it shows up. eBay does seem to bring some items out of the woodwork that don't show up on the newsgroups. I personally will continue to use eBay and the newsgroups. I've also used Virtual Hamfest and Ring Radio Trader. Let the seller choose the arena, the buyers will follow.
In support of eBay, I must say that I've never been burned there. In my many purchases there, I paid too much once (my own fault-didn't do my homework), and was mildly disappointed with one purchase. I could tell you of several instances on the newsgroups where I have been just plain stiffed, had arranged deals ignored, etc. etc. 95% of the people I have dealt with on eBay have been very prompt and courteous.
I do wish the newsgroups could come up with a system of checks and balances as effective as the feedback system on eBay.
I check eBay and the newsgroups daily, and am not recommending one as an alternative to the other, just suggesting that if you ignore eBay, you are not seeing everything available in the marketplace. I still prefer the good old-fashioned hamfest where you can see, feel, and smell the product, and look the seller in the eye. The internet is having a great impact however on how things change hands in the 90's. If you don't like eBay, stay away-truth is I'll be just as happy if you're in there bidding against me.

Cheers and 73, Greg K3EWZ
I do wish the newsgroups

# 3686. WTB: Clegg Interceptor

Newsgroup: rec.radio.amateur.boatanchors

I am looking for a Clegg Interceptor. It does not have to be collector or museum quality. It does need to be complete and the front panel needs to be in nice shape. It would be nice if it were working well, but if not hacked and repairable, I'm interested. I'd very much prefer to work a trade, or a trade plus a little cash. I am fond of the radio but am not willing to mortgage the house for one! I have a Clegg 22er in very nice shape that I can offer as part of a trade.

As I always thought, eBay is hardly worth the trouble.

==========
Padgett 0sirius wrote in message <3504ACE5.4CA5@gdi.net>...
Other than being a software pitch which I will not repeat, will make
some comments from a buyer's perspective:

1) To get a good deal you used to have to bid in the last minute. The
frenzy has abated a bit so the last hour may do.

2) As yet I have received exactly one radio in which the cosmetics lived
up to the description. If a station can be heard reguardless of hum or
distortion, "it works".

3) Assume that the seller knows nothing about the radio and will assume
that the toggle switch rammed through the back cover or the 1/4" phone
jack mounted on the side (and not visible in the *PIC*) is original.

4) ALWAYS ask about shipping before bidding. Some vendors seem to make
their profit from "S&H extra".

5) Cracks, reguardless of size are "barely visible".

6) Digital cameras hide A Lot.

7) "Modest" reserves aren't.

If you are really serious about buying on E-Bay, write down this URL:
129.6.16.35 That is the network time service from WWV. Set your system
clock on every boot. Next get one of the "Cricket" programs which will
place your bid in the last 30 seconds of an auction. Decide what you
think an item is worth. Divide by two. Subtract the shipping quoted in
the seller's response to your E-Mail. If result is above zero then
program the Cricket. Ignore the web page. You will get E-mail if you
bought the turkey. Do as I say, not as I dood 8*).

Maybe I'm a little dense, but I don't get the advantage of submitting a bid at the last second. If you're bidding "X" dollars, that's your bid, period. If you make it early, you gain the advantage over someone making the identical bid. So why wait till the last second, especially if everyone is doing the same thing? You could easily lose out to someone whose timing is a wee bit better than yours, even though his bid might be less. Lucky for him, but YOU lost the item you wanted, even though you were willing to pay a buck or two more for it. Seems a waste of time and effort.

Hi and thanks for reading.....

I have 2 rigs that are in nned of parts which I can't seem to find locally. So, this brings me to a decision. Either ask on here to see if anyone has similar models to sell to get the parts, or to sell mine for parts. Either way makes no difference to me.

I have a GTX-10 2 meter Transceiver with some bad coils in the transmitter. Also a Sears 2 meter 23 channel transceiver Model # 412-3573 0600. It also has some bad coils in the transmitter section.

If you have knowledge of parts for these critters or need parts, let me know!

Thanks

Lou

People who bid that way, with what is called a proxy bid, are bidding the way eBay was designed. That's for people who want something and know the maximum they're willing to pay. Sniping - last second bidding - is for people trying to pay the lowest possible dollar. You tend to find proxy bidding on desirable, hard to find items and sniping on commonplace things. Pretty much as you'd expect.

I have been on eBAY (as both a seller and a buyer) since day one.
Out of approx. 500+ deals, I can only remember about a hand full of bad deals.
But the last minute bidding does serve a couple of purposes.
First of all, see life as a game and see whether you can take the item away
from someone else, with no time left for the other person to counter.
If you bid high (with several days to go), then the other person has time to
think about it and could come back to outbid you.
But, since most people put their highest price upfront and then go to sleep or
maybe to work, you can take advantage of this and bid at the last minute.
But this game back fired on me yesterday, when eBAY would not accept my bid
with still several minutes to go. And I lost out.
Oh well, that's life.

I have a RF Power Labs model V360 6meter amp, vintage 1978 approx with
(4) bad finals in it. Been told they are Amperex BLW77.
They are stud mount 28vdc and put out about 150 watts each. I have
tried for over 3 months to find a source of transistor's for this beast.
Man tubes are everywhere but what happened to the old dis-continued
transistors.
I am about to give up on this thing. Anybody out there have any ideas
on where to get some.

Always a good idea. Most people actually list it as shipping but its really shipping and handling. Shipping boxes do cost money as do packing. Had one person pissed because I want $1 for a box and packing.

Also not the price on www.ups.com is the price that UPS charges and not the price a local shipper for UPS would charge. This issue has been addressed many time in the group.

Are you sure it didn't triple, then double? I don't have first hand
experience with the Gonset, but it seemed more common to triple first in
rigs of that vintage.

If it does indeed triple first, then you can do what I thought was common
(I know I did it, and I came right at the end of the wave) use 6MHz
crystals as well as 8.

Solid state RX in the mid 60's wouldn't be much good in respect of
overload and intermodulation, it was even difficult to build a good
valve version.......as the plagiate Star SR-400, it seem obvious the
japs looked at 2-B when they designed it.
I was told they did not have much success. They even used xtal
controlled oscillators where Drake 2-B has free running osc (third
mixer). The receivers were priced very low to get rid of them.

Source record: 108808
Cross-posted to: rec.radio.amateur.boatanchors,rec.antiques.radio+phono,rec.audio.tubes

Just a note that the electronics industry lost a GRAND person this past weekend... though known as one of the most successful women in business - most of us appreciated her for her kindness, and incredible generosity - to those of us who knew her well - and even those lives she touched - who never knew it was she that gave so generously. It is with great personal sadness that I must relate the loss of a great friend - a giant in the electronics industry - and a truly great, caring person who through her community / charity work - made such a HUGE difference to so many people...

Melia Peavey 1954 - 1998
She was 43.

She leaves her husband, Hartley Peavey
Two sons, Marc and Joe
At the time of her death she was:
President, Peavey Electronics Corporation
President, Peavey Electronics Limited
CEO/ Chairman D&D Transport (Trucking)
President, PVF
Member, Board of Directors of National Association of Music Manufacturers
Member, Board of Directors of National Association of Music Merchants
Member, National Board of Distinguished Women of Mississippi University for Women
Member, (and founder) Meridian Community College Workforce Council
Charter Member - National Employer Leadership Council - Selected / appointed by Bill Clinton.

Recent awards / recognition:
Recipient of the Republican Senatorial Medal of Freedom
Recipient of the Medal of Excellence award - Mississippi University for Women (given for Philanthropic efforts)
Recipient of the Humanitarian award - Meridian Alumnae Chapter of Delta Sigma Theta Sorority (given for Philanthropic efforts)
Selected as one of Mississippi's top 50 Leading Businesswomen by the Mississippi Journal.

Which is all pretty impressive stuff...

But what those of us who really knew Melia will note:
Founder - Peavey House, Shelter for abused children and families.
World wide spokesperson - who when addressing such distinguished audiences as the Southern Governor's Association, the National Small Business Administration, and others - she never missed an opportunity to

speak out about child abuse -and other issues affecting those less fortunate.

Hartley is the first to credit Melia with her contributions to the great success that is Peavey Electronics... and rightfully so. As one who worked directly for her - her no nonsense even handed management was always fair and very nurturing - I always wanted to do more for her - and she was always quick to encourage and motivate.

But her legacy should be her generosity - both financially and with her time - working to better people's lives - always from behind the scenes - never seeking recognition for her philanthropy. One thing is an indisputable fact: the world is a better place for her efforts.

Melia: we're going to miss you!

Bob,
The TUN mode puts out about 20W on my TS-820S. You use it when you first tune up to set the ALC level. (Switch to TUN, meter to ALC, peak it with DRIVE, then switch to IP and dip PLATE...still in TUN. Switch to CW, meter in IP, dip PLATE, meter to RF, max with LOAD, back to IP, dip...repeat LOAD and PLATE as required for maximum smoke.)

While in TUN, you can adjust any antenna tuner you have in-line for min. SWR. You can also use the TUN mode for plotting SWR curves for your antennae. Otherwise, it's only there for peaking the ALC level. (NOTE: You may have to back off on the carrier level if the ALC goes off scale high, which it may do on 40m or 75m; otherwise, mid-scale seems to be adequate.)

Hope that helps. (BTW, the Kenwood site has all the service bulletins for the 820, some of which you may find useful...especially if your digital display goes haywire when operating on 10 meters!)

Donald,

I wouldn't worry too much about a fancy antenna.You'll probably be surprised at what you can hear with a simple "wire".If possible,try trailing some of it out,or at least close to a window.Don't need much,about 15' or so.I "think" the SX99 is single conversion so too much of an antenna will lead to intermod,especialy at the lower bands.I'm sure you already know but the SX99 requires a speaker.At this point,I would think,your main thing is too make sure the radio "fire's up" at all. :)

Good Luck,
Al

minute.

No, this doesnt work, as you don't know what maximum bid they've set.
So you can put in your bid for $1 or $10 or $100 more than the current
high,
and still be outbid by the guy who's asleep.

# 3727. WTB Multimeter for SB200 Amp

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-03-10 00:00:00 UTC

Does anyone have a good Heath multimeter from a SB200?

I think my friend who needs one tried unsuccessfully to get a replacement from what's left of Heathkit.

If you've get one in your junk-box, I'd appreciate the opportunity to buy it.

Although I'd prefer orig-equip, I'd consider a meter that had the same movement values and close to the same appearance.

Thanks

Dan

George,

That is the crux of my problem. I can only get about 1 to 2 watts out on TUN.
I have gotten info from this post that leads me to go look for a pair of resistors
that get switched into the screen grid circuit in the TUN mode. Then I can get
it back to where the level ought to be. If I had 20W I'd be very happy. It is
apparent that it is sick. Now I'll get it well.

I also located a source for a service manual. A money order is going in tonight's
mailbag from the right coast to the left coast.

For a lot of the rest of the folks; I know how to tune a rig. Been at it a little while,
something around twenty years. I have never had a solid state HF rig. I have
used a few. I prefer my tube finals, Thank You.

Selling for a friend. A nice BC-348M receiver with LS-3 speaker and shock mount. It's about a 7+ or 8 on a 1-10 scale. Also has AC mod. He tells me it was working the last time he used it ( 4-5 years ago). Price is $250.00 plus shipping.

# 3734. need advice: Tempo One "sticky" relay, poor S-meter response on 10m

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-03-10 00:00:00 UTC
From: Ernest Stracener <ernest@itis.com>
Message-ID: <35062146.176770E5@itis.com>
Source record: 108831
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.boatanchors

IF YOU REPLY TO THIS MESSAGE, PLEASE RESPOND DIRECTLY TO ME AT ernest@itis.com

I've got a Henry Radio Tempo One SSB Transceiver, also known as a Yaesu FT-201 with a couple of problems & I'm looking for any good advice on how to best fix the problem (other than shelling out megabucks for a new rig). This is a 1970's vintage tube-type transceiver. Any helpful replies will be greatly appreciated....please reply directly to me at ernest@itis.com.....I'm not very astute when it comes to electronics (but I'm learning more with each problem faced), so please bear with me as I attempt to describe the problem.

1. I'm having an intermittent transmit problem that appears to be caused by a sticky relay or something that keeps the relay from properly closing. When the microphone is keyed and everything works, I hear the three relays closing in synch. When the microphone is keyed and everything doesn't work, I hear a relay close, but the 2 others do not close, occasionally, they will close after a second or two. I've watched the relays while this happens and the trouble seems to be with the "middle" relay...occassionally I'll hear a very faint hiss as the relay tries to close...not a sizzle, no smoke, just a faint, short duration hiss--sometimes the relay will close, sometimes not. I'm wondering if hitting the relay with a shot of contact cleaner might fix whatever is causing it to be sticky or whether I'm focusing on the wrong things here. The relay that seems to be the troublesome one has AE3218 DC12V stamped on it.

2. I'm having a perplexing problem on only the 10m portion of the radio...the S-meter doesn't deflect at all--even on fairly strong signals. On 80m, the meter looks like it is a living thing of its own, showing every heart-beat of the person on the other end (an exaggeration, but perfect operation on 80). The radio had been previously recrystalled by the former owner somewhere in the past to have CB where 10m was supposed to be. I've replaced the crystal and have done a realignment of the RF amplifier per the procedures in the manual and that did help the overall receive level, but the S-meter still does nothing on 10m. Everything else seems to be working fine...so far. I've recently made my first DX contacts & have had a number of really great QSOs with some folks on the east coast as well as locally, so I'm sure that the rest of the rig is functioning (at least most of the time).

Any helpful replies will be greatly appreciated. PLEASE RESPOND DIRECTLY TO ME AT ernest@itis.com

73,
Ernest Stracener, KB9RBZ

# 3736. Re: NEED INFO on 6 meter Gonset Xtals

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-03-10 00:00:00 UTC
From: w6lac@webtv.net
Message-ID: <6e52vc$pnu$1@newsd-154.iap.bryant.webtv.net>
Source record: 108833

Mea Culpa,

Not marked of Comm III schematic, but the Comm IV schematic clearly shows
triple then double, but completely different oscillator, buffer, driver circuit. My memory of the Gonset II more than 40 years back, says that the doubler and tripler markings were on the front of the grey wrinkle case and tuned by screwdriver trimmers, tho some units had knobs installed.

Anyway, it appears that you are correct
it triples then doubles...so I Vant u tA
no that this is the very firset MISTEAK I EVER MADE! [...so humbling to be like the great unwashed masses ]

I don't recall anyone using six megacycle
rocks, perhaps cuz you cud get 8 meg surplus ones fer a quarter.

73,

Plum

PB0AKY seeks EURO manuals and help
Forwarded: (can anyone help this chap???)

From: "F.B.J. de Rooij" <fbjrooy@worldaccess.nl>
To: <bry@mnsinc.com>
Subject: SMB and R209

Hello OM

Maybe you can help me.
I'm A radioamateur and i collect all old army rig. I've a
19-set, a 3030 TRX, 3035 TRX (it's the C-11 TX and R-210 RX),
GRC-9 and so on. Now I've a SMD Tx from the danisch army. By
this TX is a R-209 receiver. Bij the SMD tranceiver I have no
schematic of it. Do you now where I can have it. Maybe you can
thell me.

I'm sorry for the bad English I'm wrote here.

Greetings of Frans - PB0AKY.

>> I need to use this TUN mode to initially tune my amplifier
>> so that I don't blow something up or scortch it.

> I never use tune mode on my TS820. Just tune it up per normal,
>nothing will blow up. Trust me, I been using mine for 18 years
>now (still original 6146's; they can last a lifetime with care)!

I think you missed his point, which was that he uses the reduced power of his '820 when in tune mode TO PEAK THE AMPL, and thereby protect the amplifier( an external power amp.).

I have three Plectron "Sentry" and two Plectron "Chief" monitors for sale.

These are 1961 vintage radios, and are low-band (46 mhz) models.

They are in fair condition, and mostly complete with knobs and power cords.
These radios have not been tested.

I have no idea if these are worthwhile to someone, possibly as a collectors
item?

$15 each, plus shipping

# 3747. need advice: Tempo One "sticky" relay, poor S-meter response on 10m

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-03-11 00:00:00 UTC
From: Ernest Stracener <ernest@itis.com>
Message-ID: <3506A12F.AD71E94F@itis.com>
Source record: 108654

IF YOU REPLY TO THIS MESSAGE, PLEASE RESPOND DIRECTLY TO ME AT ernest@itis.com

I've got a Henry Radio Tempo One SSB Transceiver, also known as a Yaesu FT-201 with a couple of problems & I'm looking for any good advice on how to best fix the problem (other than shelling out megabucks for a new

rig). This is a 1970's vintage tube-type transceiver. Any helpful replies will be greatly appreciated....please reply directly to me at ernest@itis.com.....I'm not very astute when it comes to electronics (but I'm learning more with each problem faced), so please bear with me as I attempt to describe the problem.

1. I'm having an intermittent transmit problem that appears to be caused by a sticky relay or something that keeps the relay from properly

closing. When the microphone is keyed and everything works, I hear the three relays closing in synch. When the microphone is keyed and everything doesn't work, I hear a relay close, but the 2 others do not close, occasionally, they will close after a second or two. I've watched the relays while this happens and the trouble seems to be with the "middle" relay...occassionally I'll hear a very faint hiss as the relay tries to close...not a sizzle, no smoke, just a faint, short duration hiss--sometimes the relay will close, sometimes not. I'm wondering if hitting the relay with a shot of contact cleaner might fix whatever is causing it to be sticky or whether I'm focusing on the wrong

things here. The relay that seems to be the troublesome one has AE3218 DC12V stamped on it.

2. I'm having a perplexing problem on only the 10m portion of the radio...the S-meter doesn't deflect at all--even on fairly strong signals. On 80m, the meter looks like it is a living thing of its own, showing every heart-beat of the person on the other end (an exaggeration, but perfect operation on 80). The radio had been previously recrystalled by the former owner somewhere in the past to have CB where 10m was supposed to be. I've replaced the crystal and have done a realignment of the RF amplifier per the procedures in the manual and that did help the overall receive level, but the S-meter still does nothing on 10m. Everything else seems to be working fine...so far. I've recently made my first DX contacts & have had a number of really great QSOs with some folks on the east coast as well as

locally, so I'm sure that the rest of the rig is functioning (at least most of the time).

Any helpful replies will be greatly appreciated. PLEASE RESPOND DIRECTLY TO ME AT ernest@itis.com

73,
Ernest Stracener, KB9RBZ

# 3748. FS: Two RCA 45 Used Tubes With Readings--No Luck of the Draw

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-03-11 00:00:00 UTC
From: l.mclaughlin@popmail.csuohio.edu
Message-ID: <6e6abj$3q7$1@csu-b.csuohio.edu>
Source record: 108655

Two RCA #45 used tubes for sale with my actual TV-7D/U's readings/ratings for each tube--which high volume dealers don't have the time economically to provide.

Some Tube dealers will charge obviously less for these 45 "used tubes," but often you get what you pay for. I've seen prices of $30 to $40 range for example. BUT--It's the luck of the draw if you get a strong one or weak one that meets minimum standards. With these two RCA 45 tubes you know exactly their readings.

These two RCA 45 tubes were evaluated on a calibrated TV-7D/U tester in excellent shape (Please understand your readings can vary obviously).

I have had this experience of buying from big name honest dealers and getting weak pulls as well as good pulls. Again, luck of the draw for a cheaper price.

Have rated and priced the following two tubes accordingly:

Tube 1: RCA 45

TV-7D/U's Minimum Acceptable Value = 47

" Actual Reading for tube 1 = 78

Asking price $45.00 or B/O plus shipping. This tests approximately like a new tube in my opinion!!!

Tube 2: RCA 45

TV-7D/U's Minimum Acceptable Value = 47

" Actual Reading for tube 1 = 65

Asking price $35.00 or B/O plus shipping. This is a strong used tube in my opinion.

International buyer welcome.

Thank you.

> and still be outbid by the guy who's asleep.

George,

It actually works out very well in most cases (speaking from
experience here). You get pretty fast feedback on your bid and
can creep it up a dollar at a time until you are one or two dollars
ahead of the "sleeper". I've used this technique and it's been
used against me. If the other bidder put a bid $100 over the current
bid, then you are probably right, you won't detect that.

This "feature" of eBay is really irritating to me, however, since
it gives the person with a faster net connection an advantage. eBay
should handle this the way other on-line auction sites do, by
having a going, going, gone extension of the final bid time. This
means extending the bid time by 5 or 10 minutes past any bid that
came in within 5 minutes of the last bid deadline. This would be
a great advantage to the seller as well.

Message-ID: <01bd4d13$74245f20$e5503180@ejz.nosc.mil>
Source record: 108659

Military Radio Collectors Group will have its third annual meet at Camp San Luis Obispo, San Luis Obispo CA on Saturday May 2 . Equipment displays, operating Mil gear, presentations on history, use, and restoration of Military Radio equipment. Optional BBQ is $8, camp sites/hookups available. There is also a 7AM MilRadio swapmeet for attendees.Camp San Luis Obispo is a WWII Army post , we use the NCO Club as a meeting area for the swap, presentations, and BBQ. The last two get togethers brought out some interesting vintage comm. gear and that together with a chance to meet other BoatAnchor and MilRadio folks made for a great Radio day. Bring something to display or use , all mil gear welcome!!
If interested email a post address to receive a flyer and map. Andy Miller, KD6TKX, put the program together this year and can be reached at: AMillerTKX@AOL.COM. or you can reach me, Ed Zeranski, at: ejz@nosc.mil.

Hope to see you and your green or black crackle radios in May.

I use and old (Serial no 696 - first year of production?) RA17 as
my main general coverage Rx. I plan to add SSB and LF adapters one day
when I have some spare cash. A MA79 plus a pa would make a fun (if a
little large) QRP rig!!

You don't know what the RESERVE price is, if there is a reserve set by the seller. You always know what the current bid is, it's on the first page of the item. Dutch's technique may work most od the time because people tend to make a bid and walk away, waiting for the outcome. A brief perusal of the bidders list indicates this...there are not many multiple bids.

Several weeks ago I listed some original manual. I would like to think all that responded with inquiries and request.

However, there were several that "ordered" the original copies I had be fail to send payment or write me say "no thanks".

I am relisting what I have left.

Originals:

Hammarlund
HQ-170A
HQ-110A
HQ-110
HXL-ONE
HAMMARLUND CLOCK
HC-10

Heathkit:

HP-23C POWER SUPPLY
SB-10 SINGLE SIDEBAND ADAPTER
H-14 LINE PRINTER
SB-200 AMPLIFIER

Collins:

416F-2

Drake:

MN-7
PS-7

I also have several copies of Hammarlund, Globe King 500, Heathkit and Drake plus a few Collins, a TR-7 service manual and other Drake receivers that I will sell. Please don't ask me to make copies for I don't have a way of doing it with going to a copy center.

From: Bob Weiss <bweiss@NOSPAM.carroll.com>
Message-ID: <35071894.737517FE@NOSPAM.carroll.com>
Source record: 108674

Hi all! Cleaning up the shack and want to find homes for a few things ive acquired over the years..

EAC R-390A/URR 1967 production date. All original modules installed. Recently cleaned/aligned/retubed. Excellent mechanical and electrical condition. Includes copy of NAVSHIPS manual (1970 edition) $500.00 plus shipping.

Bird Electronics Model 4385 RF power analyst. 7" high rack mount unit takes standard slugs. Large LED readout. Measures forward and

reflected power in Watts or dBm (CW or PEP), VSWR, Min/Max, return loss, and AM modulation percentage. Has BNC connectors installed, but can be easily changed. Line section can be remotely mounted at antenna location. Includes 5B and 50B slugs for 0-50 watts 50-125 MHz and original manual.
$250 or best offer.

Various NOS tubes, transmitting/industrial and general types. Includes a

lot of JAN miniatures and a few desirable audio types (6550, 1614, amperex stuff) some transmitting types (807, 829B, 816, 4-65) and a few really strange types (2AP1-A scope tube, 20PE14 vidicon, VT-127 radar modulator tube)--approximately 250 pcs all together No useless series string TV types in the bunch! Good assortment for BA repair, vintage test equipment, etc. All tubes are NEW in boxes (all original, some in

JAN white boxes) asking $ 500 for whole lot, or will sell off the rarer

types at reasonable prices.

Mostly restored 1947 RCA 630TS television set! All tubes good-including 10" round CRT! actually makes a picture now after a few repairs (new tubes, filter caps, resistors in PS) Could use an alignment, but I dont have an old sweep/marker gen to do it! Cabinet in original, good condition--nothing done to it by me. Even listens to local taxicabs on channel "1" Asking $200 plus shipping and crating (HEAVY!) Would prefer

pickup at northern NJ QTH..

Panasonic 1983 vintage portable broadcast/ENG camera. Single tube pickup

with built in bar/tone generator and genlock.SONY motorized auto iris zoom lens. Batteries, charger, and 1/2" VHS portapak VTR. System works GREAT! (Just shot my wedding with it!) LOOKS very professional too--get great man in the street stuff-people will think you are 6:00 news if you

go with a group! For the advanced amateur video person/media pirate/culture jammer. Asking $300 for package.

Also in the same vein...become your own broadcast station!

7 Watt PLL FM broadcast band TX housed inside a TEAC stereo cassette deck.
Unit looks like normal cassette deck, except MUCH heavier, and additional BNC antenna connector on rear panel. Will broadcast directly from the cassette deck for unattended use, or put deck in "record" and will accept line level audio applied to "Record IN" jacks on rear panel.

Transmitter circuit is homebrew clone of Northcountry MPX96, followed by 7 watt PA module removed from commercial FM broadcast exciter. Additional circuitry is powered by internal 24 VDC linear power supply ,

fed from the 120 VAC line. Unit has extensive RF shielding and low-pass filtering for spectral purity. Built by professional electronic instrument designer (myself). Operates from 88-108 MHz, selectable by DIP switch. Crystal controlled subcarrier and PLL synthesizer stages. A great way to get on the air FAST with a commercial-sounding signal! Asking $300 plus shipping.

Working color TV -19" Sharp-good pix FREE with any of above if you pick up. $20 by itself.

RIGHT ON, LAWRENCE!

You are 100% right!

eBay is a thing that either drives prices out the roof, OR they sap
the sellers with fees for ads even when the item doesn't sell!

It just makes the whole process a lot more work too!

Just my opinion and experience, guys. Your mileage may vary!

Bry

# 3776. Re: [eBay] Discussion of eBay Auction IS applicable here!!!

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-03-11 00:00:00 UTC
From: mc@shore.net
Message-ID: <6e7j75$7r0@northshore.shore.net>
Source record: 108683
Cross-posted to: rec.radio.amateur.boatanchors,rec.antiques.radio+phono

eBay offers a useful service at a very reasonable fee. Apparently many of the familiar names agree - I see them as buyers and sellers all the time. There are two categories for radio equipment - one for collectables and another for consumer electronics.

I have found some wonderful deals on eBay - just recently I picked up a beautiful Leitz microscope from the 1920s with all the lenses, mechanical stage, case and two sets of specimen slides for under $100.00. I have seen radios that are totally relevent to what this newsgroup is all about on eBay - National HRO 5 and 7, Collins KWM-2A, 51J-4, R-390A, tubes, parts, etc. etc. etc. Because of the relevence of two of the classifications, active participation by many of the "regulars" as well as a continuous flow of "Boatanchor" equipment, parts and documentation I feel that discussion of eBay and any other auction enterprise is suitable for this newsgroup.

No one is forcing anyone else to participate in eBay auctions or even visit the site. However those of us who frequent eBay's site and like it have the right to discuss vintage radio items available there and should continue to do so.

I am proposing that everyone from this newsgroup using eBay to offer items for auctiion include the marker [BA] in their item description so as to facilitate searches by interested bidders. I would also suggest that discussions of eBay or items up for auction posted to this and other newsgroups such as rec.antiques.radio+phono include a marker like [eBay] in the subject line so that those who find eBay discussions objectionable would be able to ignore said postings or delete them unread.

My posting with a review of the AUCTION ASSISTANT software which I use was intended to inform those who use eBay of its existance. The nice thing about shareware is that you can try it and decide at that time whether or not it is worth registering and using. There is no commitment involved in downloading a shareware program and evaluation it. A posting describing its existance and where to get a copy was offered as a service to the Boatanchor and Antique radio communities - not a "pitch" for its purchase.

I do not intend to offend those opposed to eBay and am proposing these conventions to accomodate their wishes. However since I consider eBay to be relevent to the items under discussion here I feel that anyone wishing to discuss the subject should be able to do so without deing flamed, intimidated or being accused of being an eBay "shill".

Maybe this shouldn't be a mod for a non-beginner either. Stage by stage
gain distribution, selection of tube cutoff characteristics particularly
as they impact agc characteristics, and other factors are important.
You may have provided increased gain in one stage (that is probably not
actually needed) but what characteristics have been damaged as a
result? Besides gain, what factors in the selection of the 12BZ6 -- in
the overall context of receiver performance -- have you taken into
consideration?

>
>73, Bill W7TI
>

The reason for the last minute bid is that if you bid $50, $100, $200 and
$500 in four separate auctions a day before the end of the auction,
(lets assume, for the sake of arguement, these are very good bids)
you will most likely find that the next day you lost all the auctions at a
final bidding price of $51, $102, $202, $505 respectively. If you made the
exact $50, $100, $200, and $500 bids 30 seconds before the auction ends you
will have a higher probability of winning the auctions at or below your
maximum bid.

The final price of a auctioned item is dependent on the item itself, the
bidders AND how and when they bid.

I don't see how its a waste of time or effort, just place your bid 30 seconds
before the auction ends.

steve

>
>Is there any safe way to remove paint withour damaging the plastic
>underneath?
>
>

This is a tough one. There are some citrus based cleaners that New York and Chicago are using to remove grafitti from the trains without harming the underlying finish, and those would be one way to go. You will need a good deal of elbow grease, however. And the other way to go is to use a mild polishing compound and an orbital. It will remove the offending paint, and restore the lustre to the base material at the same time. I have used toothpaste to clean up some plastic cases, as well.

There are a number of citrus based products on the market. Major hardware stores have them...And frequently at trade shows and large outdoor flea markets there are demonstrations of some citrus based products specifically for cleaning and removing old paint.

Isopropyl alcohol may soften the paint so that it can be lifted off. Isopropyl will not affect the bakelite case.

# 3788. More radio "hot-rod"ing, replacing 12BA6 with 12BZ6, twice the gain

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-03-12 00:00:00 UTC
From: wa2ise@netcom.com
Message-ID: <wa2iseEpowHw.M5u@netcom.com>
Source record: 108599
Cross-posted to: rec.antiques.radio+phono,rec.radio.amateur.boatanchors

Been at it again, "hot rodding" my radios. This time, replacing the IF amp tube, a 12BA6 with a 12BZ6. Similar plate resistance (260K), but different transconductance, 4300 for the BA6 and 8000 for the BZ6. About 6dB more gain. It will need some external tube shielding, and the cathode and supressor grid pins are swapped on the base. I clipped off the B- (ground) supply line from one end of the cathode resistor, and connected it to the other end of the cathode resistor. So the ground always goes to the supressor grid after installing the new tube.

This may be more modifying than you might care for, but ain't too bad if it's a point-to-point chassis wired set. You may want to tweak the IF coils, but you may go unstable if you peak things too much.

This would not be a beginner's mod, do it only if you have experience with tube radios.

No, I didn't do an analysis of this, just tried it, seems to work better than
I had really expected. Probably should've mentioned I was hot rodding a
plain vanilla low cost All American 5ive hot chassis AM radio, not a top of the
line receiver like an R390 or Collins. In the AA5, choices were chosen in
large part by cost.

I checked for things like "do strong stations get distorted?" (no). This radio
only has a converter stage and one IF tube, anyway. Hey, call me an analog
"hacker" type.

If they want the stuff bad enough, they should make themselves available.
I have replied to my last message for help to have it bounced.
Either you want the stuff or you don't. Don't waste other's time.

Great!

Gosh Bob, hardly anyone anymore has the guts to try a mod on anything.You really should have mentioned the fact that it was an old ac/dc job, but heck...if you blow it up - you learned something...if not, you learned more, and had FUN doing it - it is a hobby, isn't it?

Confession time: I've bee doing stuff like that since I was ten [Don't you youngsters try this at home! ] much to my father's consternation. I learned a few things too....like keep one hand in your pocket while working on live circuits. (And don't play with the radio when Dad"s home!)

Pleasure to meet a real HAM !

Bob,

I agree. Especially when someone is looking for something. Lots of times I have the item but as soon as I see that I must remove something from their email address to tell them I can help I decide I do not want to deal with them. In my opinion it is plain inconsiderate and reflects on their whole character. I have a delete button and so do they. Another turn off, at least for me, is when a guy posts that he is looking for a real heavy boat anchor and does not bother to give his location. If they were relatively local we could probably work something out. But a lot of these BAs I am just plain not interested in packing and shipping. 73s - Mike

Well, while we're just generally complaining, I'll add a parallel
complaint ....

That is the guy who lists 40 items for sale, and then announces he won't
ship any of it in huge capital letters. Naturally there's something in
the list I want. But the posting gives no call sign, no location, and
no phone number.

Or if it does, it turns out the seller is in East Bumfork, South of
Nowhere and there are only two people that live within a 4 day drive of
his location. One would then naturally inquire as to why the seller
advertised in an international forum instead of just putting an ad in
his local paper. One would also think it might actually be good for the
seller to get up off his flabby arse and haul the BA to UPS if he wants
to sell it so badly ....

Oh, well ... enought of my rant for the day :-)

Same here.

There was a guy just this morning who was asking for something that I happened to have, but when I saw he had a stupid NOSPAM in his return address, I cancelled my response. If someone can't manage their own e-mail without inconveniencing the very people they are asking for help, they can simply keep right on asking. ::harrumph::

Hello Mike,

I recently decided to try to limit junk mail by altering my return address. After posting only a couple of times to newsgroups, I found my junk-to-real email ratio went to about five to one.

It's disturbing to me that people find the use of this method for defeating auto-junk-mailers discourteous since I strive to be courteous as much as possible. I'll admit it was frustating when I first got a bounced response--before learning what NOSPAM was all about. But I sort of think we're all in this together (or ought to be) with regard to our desire to shut out these vulgar and moronic messages to the extent possible.

It probably takes five minutes or more to type up a thoughtful response to a newsgroup posting. I just timed myself, and it took about 5 seconds to edit out a few letters in this message's header. So I don't think the time to do this places a large burden on legitimate correspondents. I wish we could direct our anger over this issue toward the mass junk emailers where it belongs. At least, that's my opinion.

Message-ID: <35085DA1.2A67@compuserve.com>
Source record: 108618

Wanted: Information/advice on re-finishing the cabinet on an Icom 730 Hf transceiver. This unit was run mobile and the clamshell is pretty scratched and paint is rubbed down to bare metal in several areas. Fortunately front panel is pretty clean. Anyone have any experience in re-painting older Icom cabinets with the dark gray-green paint? Icom doesn't sell this paint and I have no experience with computer matched paint, but the cabinet finish is flat so not sure if this finish could be made. Seems like most of the spray can paints are glossy finish. Any suggestions/recs/experience greatly appreciated.

Bob Needleman, K3AC

You know, I oughta know the answer to this, but I don't -

Where do I find a cross index of manuf/model number to Sams
photofact file ? Is there something on the WWW ??

Thanks, 73, & Have Fun,
Nick England KD4CPL nick@cs.unc.edu Univ. Of North Carolina

perhaps somebody need a course in "how to send an email",
is it too early to start next year?

In the meantime - stick to morse, I suppose you learnt it half a century
ago......everything was easier then, wasn't it?

email: LA8AK@OnLine.no

Message-ID: <6eaa0l$kjd@bgtnsc02.worldnet.att.net>
Source record: 108634

At present: 2182, 2638, 4125, 4072.3, 4613.5, 4143.6, 8247.7, 8284.9,
12382.7, 12373.7 Khz. Some of these are duplex channels as there
is a seperate oven for RX xtals for some channels. The IF's are 1480 khz
and 455 khz. Exciter strip uses a Collins mechanical filter. The PA
uses three big sweep tubes. It's HEAVY as the 117 vac supply is built
in.

Needs cleaning up and some mechanical repair. Nothing that looks major.
I think these beasts went from 2-at least 22 mhz. with the proper
coil sets and jumpering. Right now it would probably be easy to get it
on 80/40/20 USB Maybe even 160 with some piddling.

Receiver/exciter is solid state. Transmitter driver/PA are tubes.
I have no instruction manual or any other info.

Sell same for $50 plus shipping/packing. Will trade for old Jones or
ARRL handbooks prior to 1940 or 1920's and 1930's radio/wireless texts.
What have you?
73,
Sandy W5TVW

Good morning...
Looking for the manuals for the following plug-ins for a
Cushman CE-3 Communications Monitor.

Model 301 Oscilloscope
Model 303 Broadband Mixer
Model 309 Remote Meters
Model 310 Frequency Converter
Model 107 FM Deviation Calibrator

Also, if you have a right hand plug-in unit for the CE-3
that is not working, fried etc. I'd like to buy it to build
a special adaptor.

Thanks.

Jeff

# 3852. National HRO-60 tuning strips FS

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-03-13 00:00:00 UTC
From: larry@no.spam
Message-ID: <35099d1e.70501437@news.pipeline.com>
Source record: 108480
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.swap

Good afternoon folks:

Besides my coil-catacomb Nationals I also own one quite nice HRO-60R.
The problem with my 60 when I got it, was that it had more coil sets
than plastic tuning strips for the dial drum. Fruitless searching
later I discovered that these are often harder to locate than the
coil sets... :-(

So I set out to make some.... It was very much a back burner type of
project for me; Crammed between work, restoring radios, and my family
life I've been playing at it for quite a while.

Some time ago I managed through the kindness of many
members of the BA list, (boatanchors@theporch.com) to borrow original
tuning strips long enough to take measurements, and make hi-res
computer art from them. This 2400DPI art was used to make the
reproductions.

Here is the deal:
These are the flat plastic HRO-60 type. I have been told they will
also fit the dial drum of the HRO-50, but they are not curved.

I have masters and am making the following types:

A in GC and BS types (specify)
B in GC and BS types (specify)
C in GC and BS types (specify)
D in GC and BS types (specify)
E/F combo type
G/H combo type
J single scale
AA single scale
AB single scale
AC single scale
AD single scale

These are hand made reproductions of the now unobtainable originals.
They are available for $10 each. (two or more and I pay the shipping!)
Shipping + handling for single units will run $2.50 for 1st Class mail
and includes a padded mailer.

Strips may be returned for refund if you are not happy.

Oh dearie me, I presume our Mr. Muldoon made the mistake of thinking you a homophobic bigot. Quite right you're annoyed about it - you were just generally being bigoted, the derogatory reference to people as "fags" seemed to pass you by entirely.

Let's get one thing straight (no pun intended), this is a newsgroup for articles on VALVES. Remember those? Little glowing glass things? Try one of the macho groups if you want to be the all-American dumb bigoted jock, not in this one, matey! If you want to try any more anti-gay remarks, go to a gay newsgroup and try it there. Being torn to shreds by leslie-beans isn't one of the worst ways to go.

With fond regards,

Russ Sadd

PS: Please brush up on your grammar - a little punctuation goes a long way. So does humility - I can't say getting to know you better sounds like a fun thing to me. Was that subtle enough?

# 3856. FS DX-100 & HQ170

Source record: 108484

I have for sale a DX-100 and HQ-170. These items were purchased and I have not had time to get to them, so I hope someone can use them.

DX-100 - Good shape, original cabinet repainted, but no extra holes. It looks like there are two non original knobs and one no original togle switch, no extra holes in the panel. Electrically untested as had no time to bring it up on a variac...
$125 - prefer chicago area deal as 100# +
HQ-170
It plays.... A couple on non original knobs, no extra holes in cabinet or panel. no clock. The chassis has a little bite so would need some minor TLC.
$160 - plus shipping from 60067.

Thanks
Mark

There is an excellent book called "Radios by Hallicrafters" that is published by Schiffer Publishing Ltd., 77 Lower Valley road, Atglen, PA 19310. I have also seen it advertised by several ham radio dealers. This book has Descriptions and many pictures as well as a price guide. I am not sure how accurate the price guide is tho.

Don

# 3866. FS 2 meter and 432 tube amps

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-03-13 00:00:00 UTC
From: "Paul A. Cianciolo" <Paulc@snet.net>
Message-ID: <6ee0ro$ifb@news2.snet.net>
Source record: 108494

Hello Folks,

I have forsale a 2 tube amplifiers. Both run off of a common power supply. Both use a common metering deck. They were part of the WA1UQC estate. I bought them with the intention of getting back on the UHF/VHF bands. Both were operational at the time of dismantling .

I did not fire up the amps a year ago when I got them, and now, I have no time and not as much interest as I did. There is no diagram for either amp or the power supply.

Amp 1
Pair of 4CX250B's
Plumber's delight. I believe this was built by Fred N1DPM. Nicely built amp. Rackmounted
I have a spare set of tubes for this amp. I have not tested the tubes.

AMP 2

Single 4CX350 This looks like it was a commercial amp that has been modified for 432 service.

The power supply weighs about 80 lbs maybe more.

I do not want to ship these units.

Price is $250.00 for all 3 pieces.

You can email or call for more info
1-860-485-0355 ask for Paul

I am in Harwinton CT. About 25 mile West of Hartford and about 20 mile north of Waterbury
Thank you

Without judging the effectiveness of on-line auction,
I somehow seem to be yearning for the next outdoor hamfest or auction
where I can kick some rig's tires and shoot the breeze with a rig's
buyer/seller over a cold 807, even if a deal isn't done.

Ain't that part of this whole boatanchor schtick as well?

73 to all,

Although I dislike the "sniping" (and the whining), please don't advocate that the eBay concept is anything like a real auction. It may be Cut-Throat, but Sniping will NOT work in a real auction as long as other players have money and are willing to up the bid. I know of no legitimate auction house wherein a last minute bid (even between the second "going" and the final "gone") will not restart the bidding process and open the floor for additional bids. Sniping only works in a situation where the clock controls the bidding (read final bid) and bidders do not follow the spirit or the philosopy of the instructions. Obviously, we trust neither the system nor our fellow bidders.

In that the Server Gods move in mysterious ways, the recent bogging down of the system is probably more of a disadvantage to the snipers than it is to the other folks. ;^}

Joe,
Don't use the RS tuner cleaner! It will leave an oily residue on the switch contacts, attracting dust and eventually causing bigger problems than you have now. Get yourself a can of Caig De-Oxit-5 spray. It's double the price of the RS stuff, but will not leave any residue and restore the contacts to as new condition. - Bob, K3AC

> is beyond me.

I'll tell you why.

You can drop it on the pavement, run over it with your truck,
accidentally dunk it in the lake, fish it it out, and let it dry in the
sun, beat it with a stick, and it will just keep right on working. Its
a R-A-D-I-O -- not a flimsy plastic CPU and memory bank thingy that has
a radio added as an afterthough :-)

Occasionally there is something to be said for simple, sturdy, and
reliable ... And he won't accidentally confuse it with his pager :-)

Thanks for passing along that info Mike. I hit their website
http://www.tradesafe.com and got the details. I have been wary of
conducting private purchases/sales online but with a service like
tradesafe the risk is removed ! What other services like tradesafe do
you know of ?

# 3880. FS R390 meter subustitues.

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-03-14 00:00:00 UTC
From: Larry Asp <larry.asp@sympatico.ca>
Message-ID: <350B4CB5.BEB@sympatico.ca>
Source record: 108466

I have a number of black case meters, made by Bach Simpson of London Ontario, which are physcially similar to the R390/390 meters. The monuting holes are spaced the same, and the meter body is 1 7/16" diameter. Square black body, white background, black needle. They were a tuning meter, with a 0 in the middle, and a graduated scale either side. They would make a good substitute until the right one comes along. $6.00 each plus postage.

I agree eBay doesn't work like a real auction and have also been annoyed at losing bids in the last 10 seconds of an auction. In a REAL auction, the auctioneer would then return to the out-bid bidders to see if they want to raise their bid, but in eBay's case the auction simply ends because the clock ran out.

Wouldn't it be better if eBay changed their operation so that the auction wouldn't end until 5 minutes after the last time the bid was raised? This would completely eliminate the sniping problem for anyone able to monitor and bid on the auction at it's conclusion. If someone raised the bid with 2 seconds left, the end time would move out an additional 5 minutes, allowing more counter-bids. It seems to me (in my naive opinion) that this could be an easy software change for them to make.

This week the AM community lost two of our comrades - "Ozona Bob" Hohertz, W5PYT and Jeffrey "The UAN" Cramer WA3UAN. These two amateurs were legendary fixtures in the AM portion of the bands and they will be sadly missed.

Last night Jamie KF2VM suggested that a memorial net be held tonight (Saturday March 14th 1998) at 6:00 PM Eastern time on or about 3.885 to honor and remember these two fine people.

So if you're in the radio room tonight on or about 6:00 PM Eastern time and have memories of Bob and/or Jeffie and would like to share them please check into the net. I expect that Jamie KF2VM will assume the Net Control function.

RIP Bob and Jeff!

73,

Michael, W1RC

No wonder we have had to bail them out of two world wars..

# 3904. Drake TR-4: No AM audio

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-03-14 00:00:00 UTC
From: Will White <wcw@asu.uswest.net>
Message-ID: <350A3BA6.1148032A@asu.uswest.net>
Source record: 108514

I just acquired a a TR-4, and it RXed on all bands/modes at first, but

now I get no audio on AM. I tune 40M AM, and the meter shows S9 on strong SW BC signals, but no audio, not even a crackle or pop. In SSB or

CW, audio is strong, as it is on the other bands. I can't really test the other bands for AM RX, as there is little in my area. I am pretty new to electronics, and ham radio ( I am still studying for my ticket) but all the tubes light, and the radio seems to function well generally RX . Actually, the AM problem was also happening in CW mode at first, and at that time Haven't tested tx cause I don't have a dummy antenna yet. What should I look for first? I have a DMM,basic proficiency in its use, and a schematic, which I do know how to read. Thanks.

Will White

I would bet that there ARE in fact hams (DXers) using these things!!

Ever hear how LOUD some of those suckers are?

It's not ALL coming from pairs of phased 5 ele monobanders!

The power limit in Britain is 400 w p.e.p. but many UK amateurs run
SB-220, Drake L4B and L7 amplifiers etc.

You don't REALLY think they keep the wick turned down that low do you? (grin!)

Same with the 10 KW (co0nservative rating) of these surplus Collins amps that
have found their way into some amateurs shacks (I imagine!)

Recently, Joe Bento <jwbento@mindspring.com> wrote:

[[ Sigh.... imagine what one could do with 10KW though! Not to mention a

[[ _____
[[ Maybe I'm a little dense, but I don't get the advantage of submitting
[[ a bid at the last second.

It's the annoyance of not knowing what someone else might bid until the last minute when all of a sudden the bid gets run up really high.

If you are not watching closely you get the impression that something can be had really cheap. It doesn't tell you what someone has bid s their "maximum" but just that they went 50 cents higher than the last guy.

First off, your concern/gripe seems poorly founded. The
impropriety you seem to be whining about is at worst an
indescretion hardly worthy of note, and could've been quite
simply a mistake or miscommunication.

Secondly, judging by the ISP, path, newsreader, use of language,
subject content of post, and grouping of usenet groups posted
to (this is not as obscure as you might think- have a look),
"watcher" <wakanisay@owell.com>)
is in fact
"MK" <MKAUDIO@prodigy.net>.

"wow some people will do anything to cut down the competition!"

How true! How much lower will this guy sink? For another example of
how low he's gotten, see his "Why I hate whiny fags" post and ensuing
thread in rec.audio.tubes 1998/03/10. What might the future hold?

Ethan

When buying goods from private parties over the net, (or any type
of long distance transaction where you can't see the goods).
I'd recommend using an escrow service to act as a third party.

For a small fee, these services hold on to the money while
the goods change hands. They have the tracking numbers,
which allows them to monitor the whole process.

I've used a service called "TradeSafe", and was quite satisfied.
There are also services which are cheaper, and some which allow
you to pay via credit card, which drastically speeds up the process.

Mike

# 3925. Re: Drake TR-4: No AM audio

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-03-14 00:00:00 UTC
From: Sky King <skyking@ptdprolog.net>
Message-ID: <Pine.GSO.3.95.980314110838.2551A-100000@home.ptd.net>
Source record: 108569

Hi!

The very first thing I would do is get some contact cleaner and clean all
the rotary switches and controls on the rig. Many a weird problem has
been
caused by a dirty contact in a band switch or mode switch.

# 3926. HQ-129-X Crystal Calibrator ??

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-03-14 00:00:00 UTC
From: Ben Wallace <bwallace@sd.cts.com>
Message-ID: <01bd4f61$7cdfb6a0$3506a3cd@bwallace.cts.com>
Source record: 108570

I have a very nice HQ-129-X Hammarlund Receiver.
In the left rear of the receiver (looking from the front) is a small
module.
It is labeled Frequency Standard Type FS-135-C, manufactured by Hammarlund,
ect.
I need information on this module --- schematic. It currently does not
have a tube (7-pin miniature). Probably uses something like a 6BZ6 or
such.

The calibrator unit is held down by two machine screws via two brackets.
The chassis is tapped for these machine screws which leads me to believe
that this came from the factory like this.

Any of you out there have any info?

Thanks,

Ben Wallace

My HQ129X uses a 6AK5 (or EF95) tube and has Radio Shack push button switch
that I added to the front panel on the lower left corner.

RF Parts and Antique Electronic Supply has them.

Various NOS tubes, transmitting/industrial and general types. Includes a

lot of JAN miniatures and a few desirable audio types (6550, 1614,
amperex 12AX7's and other stuff) some transmitting types (807, 829B,
816, 4-65) and a few really strange types (2AP1-A scope tube, 20PE14
vidicon, VT-127 radar
modulator tube)--approximately 250 pcs all together No useless series
string TV types in the bunch! Good assortment for BA repair, vintage
test equipment, etc. All tubes are NEW in boxes (all original, some in

JAN white boxes) asking $ 400 for whole lot. Would prefer to sell
entire lot to 1 buyer.

Looking for cheap tube transceiver in the $100 to $150 price range.

Heathkit HW-100, HW-101, SB-101....National NCX-5, NCX-200,
Hallicrafters FPM-300, Tempo One: grey or black, or Swan XCVR.

Or what do you have?

Condition can be from a little rough to fair. As long as it's
restorable. I will need a manual and schematic.

I have a young son who is learning the code and wants to get his Novice
license. He wants his own radio.

Call 502-863-0500 and ask for Mark or leave message and I'll call back.
Thanks.................KB4AEP

# 3937. HRO TANK SPEAKER FS

In cleaning out the shack I found a HRO (tank type?) round speaker and
enclosure.
still works OK.
Haven't used it in years and hence:
1. It's yours for shipping from local boxit place.
2. It's garbage and not worth shipping.
Either way it's going.

My email is: w5robert@blkbox.com W5AJ
CBA address also works. 1st come, first shipped.

2AP1A is an ufb RTTY XY-scope tube. I bought a pair of them 10 years ago
from a local Yaesu dealer making offer at $3.- each. ARRL handbook
1948/49 shows information. It needs only 200-300V supply voltage, the
lower the better sensitivity. Only problem is that you have to construct
your own socket or solder wires to the pins.

>modulator tube)--approximately 250 pcs all together No useless series
>string TV types in the bunch!
some 'useless TV types' operate on 12,6VAC

Too many boat anchor projects !!!
Nice looking unit.&#65533; Front panel is very clean , no noticeable scratches. enlargement of ventilation hole on top to allow easy access to mike gain. Slight corrosion on chassis. Have had unit on 80mtr Am with good reports.
Xtal osc. can be sluggish at times, but works fine with VFO. I assume it needs a new tube.
Sorry but no manual
$70 plus shipping from 06419.

O.K.

Curiosity got the best of me again and this recorder got dragged home
from the swap meet today.

I have the sales bulletin but could really use schematic, users manual,
and service manual for the thing.

Miles Reproducer Company, Inc.
Walkie-Recordall - a product of 30 years research

This thing records on a loop of thin plastic that is about 1.5" wide and
18" long using a "jeweled-tip stylus" and says it will record 4
hours.

It's an 8lb vinyl covered box about 9" tall x 10" wide x 3" thick with
opening top and bottom. The "Sonaband" medium is installed via the top.
Batteries go in the bottom (3 x flsashlight 'D' and a 'B')

There is also a leather briefcase and a bunch of accessories.

It appears to have been target marketed to investigators and law
enforcement as it comes with a very long microphone cord. The
'sensitivity range' of the microphone is said to be 60'.

So, I've this 50's private eye recorder, a mess 'O' blank media,
the briefcase for hidden recording, the microphone, the voice relay
(apparantly for unattended telephone taps and unattended room
bugging), the AC powerpack (looks more like this was used for bugging)
The inductive telephone pickup (Ah Ha!!!!!....in case you can't
tell, I'm digging through the briefcase as I type this) a Telex
'stethoscope' head set, a shirt pocket mic with sneaky connector
through the briefcase (in addition to the 'big' microphone) and
yet another microphone that is built into the briefcase.

Anyway, I've never seen one of these before and would like to get
it going again.

It's a new toy and NOT FOR SALE! At least until I get it working
and pretend I'm on stakeout a few times.

For the curious, 1954 (I believe) prices in the brochure.
Recorder with briefcase $465.75
Telephone pickup $20
VOX $90
Powerpack $35
Stethoscope $12.50

Lapel mic. $20
Big mic $20
100 Sonabands $18.50

I'll be happy to correspond re: this bit of debris.

-bob

# 3946. Re: WTB: SSB adaptor for R390

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-03-14 00:00:00 UTC
From: Pushpendra S Khaira <singhpk@ix.netcom.com>
Message-ID: <350AD6DE.5295@ix.netcom.com>
Source record: 108590

Why ? I can receive SSB just fine on a stock R390 or R390a .

Sometimes I do need to turn down the RF gain a bit, though, to reduce
distortion on SSB signals.

If you do want a true SSB detector, It might be possible to make a
small mod to the R390a IF deck so that the diode connected triode
1/2 12au7 is connected back as a triode, and the BFO signal is fed
into the cathode of this triode, via, maybe a broadband transformer
made from a small ferrite bead. I guess that the plate of this
triode (may) also need a 220 K resistor to 180 volts.

I intend to try this as soon as I can get a new IF deck from Fair Radio.

In the meanwhile, I can receieve SSB .

**>**
Considering the component value of this HRO-500.
I am not sure what is the value of the box, certainly not more than &#65533;10
since it is so many holes in it. Perhaps I could build a HF linear in it
or it may not be suitable for this purpose. There is a lot of old
components. Transistors are mounted on sockets, but they are not much
modern, so they have no value today. Perhaps the value of the xtal
filters may increase the stated value, are they good? As an amateur
communication receiver anno 1967, it is not difficult to find a better
rx, Drake 2-B is better than any. As a boatanchor I would rather have a
National HRO Senior or Hammarlund Super Pro SP-100 - anno 1938. They are
good receivers, too. Wasn't it a DAVCO receiver being quite good amongst
the older type valuable transistor receivers.

We had some new HRO-500 in 1967 when I was morse operator at an army
radio station, I listened to one of them for few minutes and returned to
using the older Telefunken Rainbow receiver. They worked. I don't think
anybody cared to use the HRO-500's.

I suppose that is helpful - I hope the cheap software has better luck
getting into the servers during peak periods than I do. I'm starting to
see the "server busy - hit reload" grey screen in my dreams!

Welcome to the wonderful world of auction snipers. Until eBay and the other auction houses find a way to have the bid momentum drive the "going, going, gone" sequence and timing, folks will "snipe" at the last moment and get the items. Yes, if people followed the philosophy and spirit of the instructions, the system would probably work pretty well. Sadly, that is not the case.

The HRO-500 is not as bad as one could think reading this comments.
I bought a NIB last year and finally opened the box last week.
Mine is from the last series and worked fine on all bands after I
applied power. You can't take this for granted after 29 years in
a crate in military storage.
The reported problems are mainly with the first series. Electric
Radio had an article on this. I agree that there are better receivers
for less money. But I bought it for my collection as a fine example
of the transition from tubes to solid state. It is build like a battle
ship and is a nice boatanchor. And I really love the HRO dial.

I like it :-) !!

The future of internet transactions is becoming more clear. After
selling an item for $300, the seller will pay the purchase price plus
50% to cover his end of the fees, and the buyer will end up clearing
about 10 bucks.

But all of the Auction houses and Escrow services will get rich because
nobody trusts anybody else. :-)

Ya' just gotta love the internet ...

Looking for 5NB noise blanker for SPR4 receiver. Must be fully working and have docs.

Also looking for MFJ 40 meter tranceiver (MFJ-9040) in new condition. Prefer mint w/full docs and original packaging. Will consider the full rig (tranceiver, power supply, antenna matcher) if you have it.

State condition and full price including insured UPS shipping to 75010 in your reply.

Will pay cash or possibly trade Nikon photograpy equipment.

73,

Ron Ricketts

I converted the BFO to feed a 12BH7A Dual triode Product detector which
was used in place of the 3TF7 Ballast tube ... the 12BH7A has a
controlled heater warm-up characteristic and satisfied the Ballast need
and gave GREAT SSB/CW reception... 73 de Jordan VE2SWL/VE6...

# 3963. Re: Memorial Net Tonight (Mar 14th) for W5PYT and WA3UAN

Newsgroup: rec.radio.amateur.boatanchors

There was an absolutely incredible turn out for the memorial net last night. Jamie, KF2VM, who first suggested and set up the net got things started at 6PM EST. He then tunred the net control over to VE3AAM with WA1HLR at the microphone. Numerous call-ups and check-ins ensued with the proceedings ending at around 9PM EST. Over 30 fellow AMers payed their respects, related experiences, and bid a fond farewell to Jeffery Cramer, WA3UAN and Robet Hohertz, W5PYT. Jeff was well known amongst the Northeast region AMers but it was truly amazing how many in this same region also knew Bob (a testament to his fine signal on many bands). The highligh of the evening was a check-in from another Ozona amateur - W5STP. These two fine gentlemen, amateur radio operators and AMers will be missed. However, they will live on in the memories of each of those who crossed their paths.

73 Bob and Jeff.

Be careful of using tuner cleaner on the Drake wafer switches. Its
best to clean with plain alcohol. I have yet to try Caig Deoxit.
Tuner cleaners with lubricant can swell the wafers and make them tight
to turn. Believe me I learned from experience.

Gary

How can you jump on this fellow's price when Collins fans ask astronomical amounts for contemporary equipment and often citing the Collins gear is "CCA" Pristine and so on? Maybe the National post is just a joke to bait price cops and give them something to do with their drab lives. heh

Hello!

Thanks for reading this message.

I'm looking for a suitable manual for my recently acquired RACAL RA-117. Of course, all expenses gladly paid in advance.

While I get the manual, as this set was got without valves (tubes), I would like to know the valve (tube) complement of the set, in order to locate all of them.

Please, e-mail your messages directly.

Thanks!

Best regards.

# 3971. FS 9 KHz AM filter for 75A-4

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-03-15 00:00:00 UTC
From: avitko@earthlink.net
Message-ID: <6ehc37$tnt$1@nnrp1.dejanews.com>
Source record: 108417

I have a Vector Control Systems 455A4-9KHz mechanical filter for the 75a-4.
It gives excellent fidelity when receiving AM, better than the 6 KHz Collins
filter (which cuts sidebands).

If anybody has interest in this please E-mail.

Thanks, Al

I am placing this post for another ham; WA5VVT/John who is rebuilding a Collins 30K.

John is in need of any parts for the RF deck, and RF panel, less tubes.

He also might be in need of a plate transformer comparable to original unit.
John has a toll free number at 1-888-478-0530, or you can email me directly.

Thanks

Ebay is a REAL auction, it is just structured differently then the ones you're used to. Auctions take place in many different forms, not just the traditional "going once-going twice- gone" style.

> the
>auctioneer would then return to the out-bid bidders to see if they want to

>seconds left, the end time would move out an additional 5 minutes, allowing
>more counter-bids. It seems to me (in my naive opinion) that this could be
>an easy software change for them to make.

Why do you find that you have to keep going back and placing bids? If you do what ebay suggests and go ahead an bid the MAXIMUM you would pay for an item why do you find yourselves engaged in last second bidding? Just because you place a bid for say, a MAX of $100 doesn't mean that's what you would have to pay. You could end up getting it for $10 if there is not a lot of action on an item or a reserve price.

I like the way ebay is set up. I don't have to try and rely on getting thru to an overloaded server to make a last minute bid.

All snipped::
Why do folks punish themselves with an auction system that in no way guarantees any more satisfaction with the product nor indemnifies either selling or buying parties? Perhaps I am missing something, but as ham who likes to partake and sell his junk from time to time I fail to see any value added by injecting unnecessary moving parts into a system which has proven to be quite satisfactory (usenet groups). Does the Ebay thing add anything more than continued aggravation and excess stomach acid in the pursuit of the holy grail of amateur radio what ever that may be at the moment?

# 3981. JOHNSON BROCHURE

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-03-15 00:00:00 UTC
From: Charlie Vaughn <cvaughn@netdepot.com>
Message-ID: <350C52D2.B91C1934@netdepot.com>
Source record: 108427

I have a collector quality Johnson brochure, cat.no. 250-40 that I have had for many years that I am selling. This brochure is more like a detailed spec sheet and brochure, 24 pages of information on everything from a Viking Adventurer, to the 500 and everything in between. Think about it, buying a Johnson 500 for a low sum of $795.

The last page has all the keys Johnson sold. The Deluxe Semi-Automatic at $20.65 with a chrome base. Wow.

If you are interested in this brochure, write me at:

cvaughn2@yahoo.com

As I said, it's one of a kind.

Regards,

Charlie

Well the feedback system *can* be some kind of indication, if the
seller has sold items before you can view the comments from prior
buyers or see that he/she has hidden them from view. Quite often there
is also a picture of the item too so that you get at least some idea
of what the item looks like and be *more* assured that there probably
*is* an item that's been described. (It's easy to stick a pic on your
website and provide the URL here too but not many do it.) I personally
find it more comforting dealing with someone that has positive
feedback on E-Bay than KX0XXX at RR1 in Butte Montana whom I don't
have *ANY* idea on which to base an opinion.

and Scott sez:

My observation is that Ebay gives you a larger marketplace, so your
stuff is more likely to sell before your floor collapses under the weight
of it all.

I recently sold a piece of test equipment there that I had previously
advertised on this NG and on the boatanchors group with no takers. I got
half again what I had asked here and on BA. Note that I advertised here
first...snooze, y'lose.

And if the system is bogged down that one can't get into the eBay home page, much less the page where you want to bid? You never even get a shot at the "10 Second" server.

Due to overabundance of projects I am selling the following items:

Hallicrafters SX-28. This GC boatanchor receiver is in very good cosmetic condition, and should be in good working condition. The radio worked great the last time I tried it (I put it in storage several years ago and haven't touched it since). There are a few knobs missing and the meter is broken, but the housing is intact and I have a meter that may work as a relacement movement. No tabletop case. This was used at a VA hospital, I believe, based on what is painted inside the top cover. 110/220 transformer. Includes an original (NOT a reproduction) instruction book. $150 plus shipping.

Hallicrafters SX-104. This 30-50MHz boatanchor receiver is in excellent cosmetic condition and good working condition. $75 plus shipping.

Hallicrafters SX-105. This 152-173 MHz boatanchor receiver is also in excellent cosmetic condition and good working condition. $75 plus shipping.

Realistic DX-75. This GC boatanchor receiver is in very good-excellent cosmetic condition and good working condition. Includes an original (NOT a reproduction) instruction book. This is when Radio Shack was still Radio Shack, and not a Tandy division. $50 plus shipping.

Speical deal: Take all four of the above radios for $300, or buy all three Hallicrafters and get the Realistic for free!

DenTron MT-2000A Antenna Tuner. 3kW PEP antenna tuner. This unit is in good cosmetic and working condition. $150 plus shipping.

I need to get out of the radio business, so I would prefer outright sale to trades. Delivery possible in north Texas, eastern Oklahoma, or northwest Arkansas. If interested, or for more information, email me at twhite@cyberramp.net. Thank you.

# 3996. Clegg "Venus" Schematic needed

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-03-15 00:00:00 UTC
From: "Roger A. McCarty" <rmccarty@earthlink.net>
Message-ID: <6eif85$ka2@ecuador.earthlink.net>
Source record: 108442

Anybody have one of these?
Of course I would be willing to pay for a copy. The schematic and alignment data would be sufficient.
Thanks
Roger KD6CC

# 3997. WTB: 6 Meter AM Rig

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-03-15 00:00:00 UTC
From: Scott Gray <comm5@pacbell.net>
Message-ID: <350CC275.506BE9A2@pacbell.net>
Source record: 108443
Cross-posted to: rec.radio.swap,rec.radio.amateur.boatanchors

WANTED:

Decent 6 meter AM transceiver, clean and working.

Examples:
Gonset Comunicator IV (w/ VFO), Gonset G-50, Clegg 66'er, Clegg Thor,
Hallicrafters SR-46A (w/vfo).
Heath "Pawnee" HW-10, Lafayette HA-460 etc. Prefer 25 watts + out.

Also "sepearates" like TX-62 w/VFO, Johnson 6N2 (w/P.s.,Modulator). And
receive converters; Ameco, Johnson etc.

Also looking for HF/10 meter AM - Gonset G-28, Lafayette HA-410. Gonset
G76 w/AC .

Thanks,
Scott KD6CQ

# 3998. Re: If you use Ebay Auction you might find this interesting!!

Newsgroup: rec.radio.amateur.boatanchors

```
Archive-name: radio/personal-intro
Revision: 2.2 98/14/05 03:50:23
Posting-Frequency: posted on the 15th of each month

This message describes the rec.radio.amateur.*, rec.radio.cb,
rec.radio.info, and rec.radio.swap newsgroups, as well as their Internet
mailing list counterparts and complements. It is intended to serve as a
guide for the new reader on what to find where. Questions and comments may
be directed to Jeffrey Herman, KH2PZ, (jeffreyh@hawaii.edu), or Paul
Schleck, K3FU, pschlect@novia.net.

This message was last changed on 14 March, 1998.

History
=======

Way back when, before there was a Usenet, the Internet hosted a mailing list
for hams, called (appropriately enough) INFO-HAMS. Ham radio discussions
were held on the mailing list, and sent to the mailboxes of those who had
signed up for it. When the Usenet software was created, and net news as we
now know it was developed, a newsgroup was created for hams: net.ham-radio.
The mailing list and the newsgroup were gatewayed together, eventually.

Over the years, as the net grew, the volume of discussion became
progressively higher. First one by one, and then as part of two
reorganizations, what was once one group became many. In the process,
developments elsewhere on the net were reflected in the groups as they were
created, most notably the change to place all of the ham radio groups in one
hierarchy.

The collection of newsgroups continues to grow as more people join the net,
and as more topics of discussion gain volume, I expect to see more groups be
created as well. This follows what is happening on the rest of the net.

Nearly all of the radio newsgroups have corresponding mailing lists, the
notable exception being rec.radio.swap. There are also a few mailing lists
that don't have newsgroups.

The Current Groups
==================

It's important to post messages to the group that's appropriate for them,
and not to the groups that aren't. The whole idea of having different
newsgroups is so that folks who aren't interested in, say, homebrewing,
don't have to wade through messages about homebrewing on the way to read
about Field Day. Posting appropriately is just good etiquette.
```

The rec.radio.amateur.misc group is the catchall. It is what rec.ham-radio was renamed to during the first major reorganization. Any message that's not more appropriate in one of the other groups belongs here, from contesting to DX to ragchewing on VHF to information on becoming a ham.

The group rec.radio.amateur.digital.misc is for discussions related to (surprise!) digital amateur radio. This doesn't have to be the common two-meter AX.25 variety of packet radio, either; some of the most knowledgeable folks in radio digital communications can be found here, and anything in the general area is welcome. The name was changed to emphasize this, and to encourage discussion not only of other text-based digital modes, such as AMTOR, RTTY, and Clover, but things like digital voice and video as well. The former group, rec.radio.amateur.packet, was removed on September 21st, 1993. It is obsolete, and you should use .digital.misc instead (or the appropriate new mailing list, mentioned below). The group has .misc as part of the name to allow further specialization if the users wish it, such as .digital.tcp-ip.

The swap group is rec.radio.swap. This recognizes a fact that became evident shortly after the original group was formed: Hams don't just swap ham radio gear, and other folks besides hams swap ham equipment. If you have radio equipment, or test gear, or computer stuff that hams would be interested in, here's the place. Equipment wanted postings belong here too. Discussions about the equipment generally don't; if you wish to discuss a particular posting with the buyer, email is a much better way to do it, and the other groups, especially .equipment and .homebrew, are the place for public discussions. There is now a regular posting with information on how to go about buying and selling items in rec.radio.swap; please refer to it before you post there. To answer a frequently asked question: No, there is no mailing list that goes along with this group. If you can't read Usenet news directly, you're out of luck.

The group rec.radio.amateur.policy was created as a place for all the discussions that seem to drag on interminably about the many rules, regulations, legalities, and policies that surround amateur radio, both existing and proposed. Recent changes to the Amateur Radio Rules (FCC Part 97) have finally laid to rest the Great Usenet Pizza Autopatch Debate - it's now legal to order a pizza on the autopatch, if you're not in the pizza business - as well as complaints about now-preempted local scanner laws hostile to amateurs, but plenty of discussion about what a bunch of rotten no-goodniks the local frequency coordinating body is, as well as the neverending no-code debate, may still be found here.

The group rec.radio.cb is the place for all discussion about the Citizens' Band radio service. Such discussions have been very inflammatory in rec.ham-radio in the past; please do not cross-post to both rec.radio.cb and rec.radio.amateur.* unless the topic is genuinely of interest to both hams and CBers - and very few topics are.

The rec.radio.info group is just what its name implies: it's the place where informational messages from across rec.radio.* may be found, regardless of where else they're posted. As of this writing, information posted to the group includes Cary Oler's daily solar progagation bulletins, ARRL

bulletins, the Frequently Asked Questions files for the various groups, and radio modification instructions. This group is moderated, so you cannot post to it directly; if you try, even if your message is crossposted to one of the other groups, your message will be mailed to the moderator, who is currently David Dodell, WB7TPY. The email address for submissions to the group is rec-radio-info@stat.com. Inquires and other administrivia should be directed to rec-radio-info-request@stat.com. For more information about rec.radio.info, consult the introduction and posting guidelines that are regularly posted to that newsgroup.

The groups r.r.amateur.antenna, .boatanchors, .dx, .equipment, .homebrew, and .space are for more specialized areas of ham radio: discussions about antennas, the older tube based amateur, military, and commercial gear, commercially-made equipment, homebrewing, and amateur radio space operations. The .equipment group is not the place for buying or selling equipment; that's what rec.radio.swap is for. Similarly, the .space group is specifically about amateur radio in space, such as the OSCAR program and SAREX, the Shuttle Amateur Radio EXperiment; other groups cover other aspects of satellites and space. Homebrewing isn't about making your own alcoholic beverages at home (that's rec.crafts.brewing), but rather construction of radio and electronic equipment by the amateur experimenter. The .dx group is devoted to long distance amateur communications.

Except for rec.radio.swap and rec.radio.cb, all of these newsgroups are available by Internet electronic mail in digest format; send a mail message containing "help" on a line by itself to listserv@ucsd.edu for instructions on how to use the mail server.

All of the groups can be posted to by electronic mail, though, by using a gateway at the University of Texas at Austin. To post a message this way, change the name of the group you wish to post to by replacing all of the '.'s with '-'s - for example, rec.radio.swap becomes rec-radio-swap - and send to that name@cs.utexas.edu (rec-radio-swap@cs.utexas.edu, for example). You may crosspost by including multiple addresses as Cc: entries (but see below). This gateway's continued availability is at the pleasure of the admins at UT-Austin, and is subject to going away at any time - and especially if forgeries and other net.abuses become a problem. You have been warned.

Mailing Lists
==========

In addition to the mailing lists that mirror the Usenet newsgroups, there also are a few that stand alone. These cover specific areas of ham radio, and discussion is focused on just those areas.

The cq-contest mailing list is for discussions of contesting in ham radio. To join, send email with the word "subscribe" on a line by itself to cq-contest-request@tgv.com.

The DX mailing list covers the finer points of DXing. This one is also joined by mailing "subscribe" on a line by itself, this time to dx-request@unbc.edu.

There's also a VHF mailing list, for VHF operators of the weak signal persuasion. You can join this one be sending "subscribe vhf" on a line by itself to vhf-request@w6yx.stanford.edu.

The QRP-L list is devoted to building and operating gear at low-power outputs. To subscribe, send an email to listproc@lehigh.edu and only write: subscribe qrp-l Your Name.

The TopBand e-list is devoted to all areas of operation on 160m. To subscribe, send an email to majordomo@contesting.com and only write: subscribe topband and follow the instructions you'll be sent.
This site, contesting.com, also hosts a couple dozen other ham-related e-lists. Use the above address, and only write: lists to get the entire index.

The Boatanchors e-list is devoted to the older tube-based ham, military, and commercial communications gear. To subscribe, send an email to: listserv@listserve.tempe.gov and only write: subscribe boatanchors

For homebuilding transmitters and receivers using tube technology, there is the Glowbugs e-list; send an email to:
majordomo@piobaire.mines.uidaho.edu and only write:
subscribe glowbugs <your@address.here>

The VHF DX discussion list can be accessed by sending an email to: majordomo@blacksheep.org and only writing: subscribe VHF-DX-discuss.

Qth.net hosts over 100 ham-related e-lists, including lists devoted to each state, manufacturer, mode, band - too many to state here. Send an email to majordomo@qth.net and only write: lists to get the complete index.

For one of the most complete indexes of email lists, see
http://pw2.netcom.com/~ac6v/pageae.html

Please do NOT send subscription requests to the mailing lists themselves; that doesn't work very often, and is very annoying to those on the list. Also, please keep your electronic mail address current with any mailing lists you subscribe to, as dealing with returned email is a nuisance for the person maintaining the mailing list.

A Few Words on Crossposting
==========

Please do not crosspost messages to two or more groups unless there is genuine interest in both groups in the topic being discussed, and when you do, please include a header line of the form "Followup-To: group.name" in your article's headers (before the first blank line). This will cause followups to your article to go to the group listed in the Followup-To: line. If you wish to have replies to go to you by email, rather than be posted, use the word "poster" instead of the name of a group. Such a line appears in the headers of this article.

One of the few examples of productive cross-posting is with the rec.radio.info newsgroup. To provide a filtered presentation of information articles, while

still maintaining visibility in their home newsgroups, the moderator strongly encourages cross-posting. All information articles should be submitted to the rec.radio.info moderator so that he may simultaneously cross-post your information to the appropriate newsgroups. Most newsreaders will only present the article once, and network bandwidth is conserved since only one article is propagated. If you make regular informational postings, and have made arrangements with the moderator to post directly to the group, please cross-post as appropriate.

Thats not a problem too, there is a dedicated server for bids only,
I forget the name, it has always responded in less than 10 seconds,
no matter how bogged down the other servers happen to be, I guess
it has top priority into the database.

Bry (bry@NOSPAM.mnsinc.com) wrote:
:
: It's the annoyance of not knowing what someone else might bid until the last
: minute when all of a sudden the bid gets run up really high.
:
: If you are not watching closely you get the impression that something can be had
: really cheap. It doesn't tell you what someone has bid s their "maximum" but
: just that they went 50 cents higher than the last guy.

So, don't treat it that way. Pretend that you are making sealed bids. In other words, bid what you are willing to pay. If someone else is willing to bid more - so be it. Whether they do so early or at the last moment is immaterial.

If you want to get something at a bargain price, then make a bargain bid. You might get lucky - but don't count on it. The only time that happens is if no one else is really interested.

I don't have that particular manual, but HI Manuals in Council Bluffs
Iowa has them I believe. Check a recent QST, CQ or other publication
for the complate address.

It sounds to me like you have the equivalent
of an old Dictaphone dictating recorder.

They used red and blue plastic belts
and scribed lines in the belts, much like
the old 78, 45 and 33 1/3 RPM record players did.
The belts could only be used one time.
As you could not rewind and record,
you had to say "correction" and redictate
to correct errors in your dictation.
The stenographers and secretaries
tended to listen ahead a few seconds
( Before they typed what they heard. )
in order to avoid typing bad copy.

I was using one of these machines
as late as 1963. I had a vibrator-type
D.C. to A.C. converter in my car to
provide power for the beast, and as I
recall, it took about 100 watts to power it.

The old Dictaphone belts could only record
about 30 minutes of sound, and the quality
was very bad. Of course, as soon as the price
for magnetic tape recorders came down, the old
Dictaphone belts became obsolete
and the Dictaphone Company lost
a very profitable market.

It does not make sense. Who is so stupid to look for replacements? You
look at a data book from one of your favourite component dealers, I
would suggest Motorola or Philips/Valvo transistors, choose a low cost
device, and it is never difficult to find a better device. When HRO-500
was built consumer transistors had only existed for 10 years, now they
have existed for over 40 years.

And if your're a bit doubtful about the escrow service, you can use
an escrow-escrow (called Escrow^2) service which will hold the money
while the escrow service certifies the merchandise. There is a plan
to form an Escrow^3 service since some scumbag running Escrow^2 ran
off with all the money. More news on this in 2 1/2 weeks :-)

Thats a lot of money for a radio made in the mid 60's.. but I want to
know how anything 30 plus years old could still be "new in the box " !
Original owner ? Never opened the box ? Radio never used ? Stored all
these years and never used.. to be "new in the box" all the above would
have to be true..

Is that the "Dictabelt" unit of JFK assasination fame? (In addition to Mr. Zapruder's famous movie camera, there was also some kind of dictating recorder running at the time of the shooting. Forensic audio experts have done all kinds of analyses of the gunshots/echoes, to prove or disprove the Warren Commission's findings, as the case may be.)

# 4039. Re: NEED INFO on 6 meter Gonset Xtals

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-03-16 00:00:00 UTC
From: Michael Black <blackm00@CAM.ORG>
Message-ID: <Pine.GSO.3.94.980316205934.27207B-100000@Ocean.CAM.ORG>
Source record: 108252

They were all sort of the same. I came across a Gonset Communicator schematic (for 2 meters) and the transmitter is basically the same as any tube transmitter that was described at the same time.

There's a pentode oscillator, with the plate tuned to 24MHz. I just looked in an old VHF manual, and it's pretty much the same oscillator circuit for for any of the VHF bands. So whether you put a 6 or 12 or 24 MHz crystal in the socket, the plate will be 24MHz.

The advantage of a higher frequency crystal is that you'd get more output from the first stage, which might be important if a later stage is marginal.

And yes, the lower the crystal frequency, the closer together are the harmonics, and the more likelihood that you'll be transmitting an undesired signal into the antenna.

Some of those old transmitters had minimal tuned circuits before reaching the antenna (the 2M Gonset had 4 single tuned circuits in the transmitter, one at 24MHz, one at the output of the next stage, one at the stage after that and one in the plate of the amplifier feeding the antenna.

Probably unwanted harmonics of the crystal frequency were not attenuated all that much.

Then you'd see circuits where there were double tuned circuits between stages, or even low gain amplifier stages (with tuned circuits) between some of the multiplier stages.

Obviously, those more complicated designs had the unwanted signals attenuated to a much greater extent.

When FM came along, and transistor transmitters were being built, they often used 18MHz crystals so the transmitters could still be simple but clean.

From time to time, people ask where they can find a schematic for bulding a 6 or 2Meter transmitter, and the obvious place to look is in old books or magazines. All those old 6 or 8MHz crystals did not disappear; they must be around somewhere. Yet we've become more concerned about having clean transmitters in more recent years, and I do wonder how well those old transmitters would rate.

The way I'd do it, if I wanted to use those old crystals, would be put a voltage controlled oscillator on 48 MHz (50MHz if a six meter transmitter), use a divider to get down to the crystal frequency, and then compare then in a phase detector that would then feed a control voltage to

the VCO. In other words, use a divider rather than a multiplier, to get
the same results.

Of course, if you start doing that, you start getting to the point where a
little more work would give you a complete synthesizer.

What you may consider to be unethical may be considered forum specific tactical judgement
by others.

To each his own. I gave up trying to sell valuable equipment in public forums like this newsgroup
due to responses suggesting that I am unethical in trying to get a reasonable (i.e, half of what I
paid a year or two ago) price. To each his own.

I simply stay away from ebay, and many other auctions, as frequently the tactics of the parties
involved do not suit me. Also, it tends to take a lot of time involvement to find a good enough
deal on the item you need. I don't have that kind of time at this point in my life.

People will learn. Those folks who succeed at ebay type situations will continue to use them,
while others will learn the hard way it's not for them. I don't see it as worthy of much concern,
these things tend to straighten themselves out eventually.

Mr. Hall has hit on the solution, IMHO. I have been involved in other
online
auction services that do exactly what Mr. Hall suggests: the bidding time
is
extended X number of minutes each time a bid is received at closing.
Why E-Bay doesn't follow this practice is beyond me.

Pete

The problem could easily (well I am not sure of the programming
>involved) by EXTENDING THE AUCTION FOR 3-5 MINUTES EACH TIME A BID IS
>MADE AND LESS THAN THIS TIME REMAINS. You'd still have to be there at
>the end if you are serious BUT you wouldn't have the door slammed on
>you. You get to buy it if you are the one that wants it the most and
>the seller gets the true auction value of his item. This may not make
>things cheaper but it would make them much fairer
>
>73s,
>

# 4043. FS: Hallicrafters S-120 / Eico 710 dip meter

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-03-16 00:00:00 UTC
From: dx40@juno.com
Message-ID: <6ekto1$vtf$1@nnrp1.dejanews.com>
Source record: 108256
Cross-posted to: rec.radio.swap,rec.radio.amateur.boatanchors

For sale:

1. Hallicrafters S-120 shortwave receiver. Very nice physical condition. Plays on all bands, but needs tuneup. $40 plus shipping.

2. Eico 710 grid dip meter with complete original coil set. Works. Scratches on face and chips in case paint, but in decent overall shape. No manual. Had it for years, but replaced it with a new MFJ. $40 plus shipping.

See both items at http://www.boatanchors.com then follow links to the 'Trading Post' page.

Thanks,

Dave

# 4044. Drake TR4 paint

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-03-16 00:00:00 UTC
From: Will White <wcw@asu.uswest.net>
Message-ID: <350E02EF.10DACBDE@asu.uswest.net>
Source record: 108257

Is there a source for the dark brown paint Drake used on the TR4? I was thinking about taking the case into a store with a goodaint matching service, but would prefer to use a paint that matches color *and* texture, ideally one that is of the same chemical type as the original. Another problem is dealing with the screened labels on the bottom case. How do you repaint, match color, and preserve the labels? I really don't want to mess with trying to re-screen them, unless there is a source of reproductions that is truly exact.

Will White

# 4052. Ranger question

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-03-16 00:00:00 UTC
From: Lara & Mike Pagel <pagel@wi-net.com>
Message-ID: <01bd5086$c80d5a80$b233e3cf@hmpagel.uwsp.edu>
Source record: 108350

Forgive my innocence, but I've got a question that can probably be easily answered by a Johnson collector.

I recently obtained my first boat anchor (at least since I used them as a Novice). This Ranger has not been on the air in 20-30 years, so I am proceeding carefully, replacing caps, etc. As I hunted down the electrolytics on the parts list (a list obtained from a Ranger manual recently purchased from W7FG), I realized that the manual's parts list and schematic identifies two tubes that are not present in my rig.

V13 (12AU7) and V14 (6AL5) are not in this rig, and the chassis is not even punched for sockets.

When I ordered the manual I noticed that W7FG had two versions of the manual available. One of them (the one I didn't order) was for a kit version. Is that what I've got on my hands? The workmanship (wire routes, solder joints, etc.) would be consistent with a kit.

Any observations, suggestions, etc? Was the kit on par with the factory built radio (if the builder was competent)?

Thanks in advance for your advice and history lesson.

73, de Mike, K9UW

Hi,
I'm selling a Hallicrafters SX 130 in about as mint as one would expect to find these days. No chipped paint, cosmetics a 10, radio is a joy to use. Picked this up from a local guy who had it in storage since the early 70's, and wanted to move it along. I have checked the alignment, cleaned everything, and don't have the room for it. It's a beautiful radio deserving of a shelf in your shack....

Asking $150.00 for the radio, I'll deliver in the Pittsburgh, PA area.

Source record: 108358

The weather forecast for this coming weekend looks kinda WET.
But never fear, THE SHOW WILL GO ON!
We are working with the Sheraton on a plan to move the Flea Market inside.

There WILL be a Radio meet in Charlotte this coming weekend!

RAIN or SHINE ! ! !
---

---

WHEN: March 19, 20 & 21 1998

WHERE: Sheraton Airport Plaza Hotel, I-85, exit 33 ,the Billy Graham Parkway, Charlotte NC

1998 brings you the 22nd annual AWA Spring Meet in the Carolinas, hosted by the Carolinas Chapter of the Antique Wireless Association.

The registration desk will open at 12noon on Thursday March 19th for early arrivals.

Dr. Harold Cones noted author of the excellent book on the history of the Zenith Transoceanic will give a talk at 8pm on the early years of Zenith.

NOTE! There will be no FleaMarket activity on Thursday. There will be NO buying, selling, trading, or displaying of merchandise before 8am Friday March 20th.
This will be strictly enforced. Those violating this policy will be asked to leave to meet.

Friday March 20th. The FleaMarket will open with a BANG at 8am sharp and remain open all day. Equipment check-in of the auction will start at 1pm with the auction beginning at 3pm.

Friday evening there will be a SPECIAL reception and open house at The Museum of the New South located in downtown Charlotte. A charted bus will depart the hotel at 7pm to carry as many people as possible to the museum. Those that prefer to drive will provided with a map. The museum is very easy to get to from the hotel.
At the museum you will see an exhibit on radio in the south called, " Don't touch that dial, Carolina Radio since 1920". Local members of the Carolinas Chapter of the AWA played a big part in setting up and loaning equipment for the exhibit.

The meet will continue on Saturday with the FlaeMarket starting first thing in the morning. Check-in of equipment for the Old Equipment Contest will be from 8 till 10am. The contest room will be open for viewing from 10 until

12noon and again at 1pm with the programs starting at 1:30pm. The two main programs are related to radio history in the Carolinas, the first one is on Dr. Reginald Fessadon and his early wireless experiments done at Hatteras on the outer banks of NC. The second program is on the early history of pioneer broadcaster WBT.

For Registration information send a SASE to: POBox 3015, Matthews NC 28106.

# 4061. Re: FS: Unbuilt Heathkit SB-221 Linear Amplifier

Newsgroup: rec.radio.amateur.boatanchors

Message-ID: <350c9e1e.50253299@nntp.groupz.net>
Source record: 108359

The ratings on these old amps were based on the old limits: 1000 watts
average DC input. When Heath designed it, the RF components and power
supply were meant only to withstand that power level. They will
conservatively deliver only deliver 500 - 600 watts RF output. Pushing
one to higher power levels than this will shorten its life.

Ah, never thought of that! Now that you mention it, it would be an interesting experiment to see how much the 500's performance could be improved by using better transistors. Of course, it might be a problem to find rating sheets/databooks that give the operating parameters for the 500's transistors.

Source record: 108364

No, I don't have one for sale! Just a problem with the one I have . .

Let's say I tune in a station, for example KGO (810 Kc.). This of course will show up when I tune the dial to "310", assuming I'm set to the 0.5 loop lock position. Let's also assume that the station is tuned in perfectly, right on "310".

Then, if I twist the dial either way, say about a half a revolution, and then return it to the "310" position, the station is no longer tuned in perfectly; somehow, the frequency that the radio is tuned to has shifted.

I've checked all the setscrews, and cleaned the capacitor wipers, and it still happens. I'm hoping someone's got a thought or an idea that'll point me in the right direction to fix this. Otherwise, the radio works great and is a pleasure to use!

thanks,

Joe KC6TXU

Hi Gang,

I'm looking for a Heathkit SA-2040 killowatt antenna tuner. It must be in excellent working as well as cosmetic condition. No arcs please! You can reach me at 515-669-7501 or email is OK too. Please give me a price a brief description of the condition of the tuner and your location so we can figure shipping costs. Thanks in advance and 73,

Al

OK, I MUST BE MISSING SOMETHING.

why didnt you take the 5 min. to confirm his phone and other info before
you sent the check.??????????
btw. mass has a consumer protection law that provides for jail time if
anyone steals from another party thru the mail. so either this guy is
stupid, or he is in the hospital and cant respond.

Not necessarily - I'd been watching an HP 410C multimeter on eBay for a few days - it had "wandered" up to around $30 or so by Yesterday morning (auction was closing at roughly 8PM PST). I had already asked the seller what was wrong with the AC probe - and he had replied that it was in pretty good physical condition - just didn't work - probably the EA53 tube; the other functions seemed to work just fine. Since I have a couple of EA53s on the shelf - my mind was made up - I'd definitely bid. Since 410Cs tend to go for $75 to $150 in working condition (depending on cosmetics) and EA53s run around $50 - $75 - I decided what my bid would be. I waited until about 10 minutes before the end of the auction - and placed my bid. Sure enough - the snipers showed up shortly before the auction closed, and my wife and I got tickled as they hammered away at my bid - a couple of dollars at a time - trying to just sneak over my max. With only a couple of seconds to go the bid ran to $68 when time ran out - and my $75 single bid had held. I didn't have to madly try and cram in a last second bid to defend my position - it was enjoyable to watch the last second snipers try and try to "sneak" over my bid - and knowing that every time they got the "you've been outbid" notice. If one had bid $76 dollars - they would have a new meter - and I'd still be looking. But I didn't pay a penny more than I wanted to (in fact the total with shipping was still less than my bid - but I rounded my check up to $75 just to keep it simple - and since that was my "target" price anyway).

Here again is an instance of 1) what I consider a "fair" - "at market average" price for something on eBay - and 2) the proxy bidder works just fine, thank you very much! As busy as eBay was last night - and the last accepted (unsuccessful) bid was 13 seconds before the end of the auction - I doubt I could have gotten a "defense" bid in... (the item # was 7864082 if you want to look at the last minute bids - eBay only shows the highest (last) bid for each bidder - but we watched at least six "bumps" in my bid (by the proxy bidder) in the last two minutes - and we probably didn't see all of them).

I believe that the very early Rangers used cathode bias on the modulator tubes. In later versions the cathode bias was replaced with a fixed negative supply which used the 6AL5 as a rectifier. The fixed bias allowed the modulator to produced more undistorted audio output. This is a desirable enhancement on the Ranger.

There are two 12AU7's used in the transmitter. One in the speech amp. that drives the coupling transformer to the modulator grids; the other is used in a keyer circuit. My Ranger has these tubes mounted on a small sub-chassis above the normal chassis.

If you are planning on using the transmitter on the air, you might want to solid-state the rectifiers and add a more stable screen supply for the modulator tubes. It makes a distinct difference in performance.

Unfortunately, I was ripped off by Thomas Zach Bruce, WA4TJS, and an excrow service would not have helped. I sent him $725 for what was described as an "excellent condition" ICOM R71A receiver. He did send it to me (poorly packed), but within 24 hours I sent it back to him as it was in much less than "excelllent condition". He subsequently kept the receiver (which he did acknowledge receipt thereof) AND the money. I have sent him MANY email messages, but lately his email address no longer works (I wonder why).

It is my assessment that if a slime bag wishes to rip you off, you have little practical way to protect yourself. The good news is that 99+% of hams of honest and reputable people.

> I recently obtained my first boat anchor... This Ranger has not been on
the air in 20-30 years

Welcome to the cult. In my humble opinion, the Ranger is the classic
"classic radio" ham transmitter.

>I realized that the manual's parts list and schematic identifies two tubes
that are not present in my rig.
> V13 (12AU7) and V14 (6AL5) are not in this rig, and the chassis is not
even
> punched for sockets.

Later versions added a "sequence keyer" circuit that was intended to
improve keying characteristics. It was added on a sub-chassis above the
main chassis to the left of the VFO; the sub-chassis is probably absent
from your earlier version. I personally favor the earlier arrangement's
simplicity. I have the same (non-sequence) version as you, and I get great
reports on keying quality.

> The workmanship (wire routes, solder joints, etc.) would be consistent
with a kit.

The Ranger was available both factory assembled and as a kit. The two
versions were identical. If yours works ok, you're fine.

Best of luck, and happy vintage radio!

Mike, N4PDY

## 4080. Hallicrafters Paint?

OM, XYLs, YLs,

Well, I'm sure this is nothing short of a long shot...

My 2-CQ knobs have some corrosion on the chrome trim ring. However, the Q knob (lower) is not a standard knob like on the 2-C, 2-NT, etc. It has a wider skirt and a triangular arrow painted on it.

Drake no longer stocks this particular knob, so I'm wondering if someone can point me to a manufacturer that might have some in stock? I rather think no one has a nice one in their junk drawer, eh? :)

73,

Casey, KS7J (delete NOSPAM to reply)

In article <350AB1D0.5A14@atl.organization>, BOB DUCKWORTH
<bob@atl.organization> made a happy noise like
>This thing records on a loop of thin plastic that is about 1.5" wide and
>18" long using a "jeweled-tip stylus" and says it will record 4
>hours.
It is a derivation of the old Film Recorder that was used in Air Traffic
Control in the 50s, which recorded on an 35mm Cine Film loop that ran
some 12 hours per loop, and was a ****! beast to handle..and the audio
quality was dreadful...only reason was that tape recording could be
erased, and the film one could not...until on-board flight recorders
were introduced, and then tape was allowed, as there was a backup system
in place to get the info off of in case of an Aircraft accident. I
spent many happy hours working on those beasts in the 50s.......

This one was made for legal and/or surveillance monitoring..film being
used for the same reasons...non erasure by accident or design...it was
then more or less acceptable as evidence or trial transcript purposes.

The following items can be delivered to the Dayton hamfest or
Pick-up only--- in Greenville, SC(Simpsonville).
. Very willing to trade--what do you have? Very interested in
MacKay and Racal tube gear. Navy & Maritime gear. Collins
75A1/2, HRO's, 75A4 filters, coils for HRO 50/60 or other interesting
stuff(?).

National NC 303--Excellent electrical condx. works and looks great.
cabnet repainted and a close match to original-manual copy. $225

Johnson Valiant-Full output . Some re-capping and new heavier duty
relay installed. Panel looks good but cabnet
has some blemishes-manual copy. $275

Johnson Invader 200--Looks good but needs some work. 100W out on some
bands. Complete and will include a parts radio that has a cabnet,
front panel
and rf deck with many parts, knobs etc--manual copy--$275

Hallicrafters-HA-2&6 transverters with all tubes and pwr supply.
Complete
but untested. No dents but some paint missing--with manual copy--$250

Hallicrafters--HT-37--100W out on all bands. Audio needs some
attention.
Cosmetics very good. Complete with all tubes and manual copy--$100

Navy RBC--Black face-4-27MHz-works very well. All bad out of spec
resistors changed.
One bad meter and no cabnet. This is a RBC-2 and doesn't contain the
IF output
module so its a real early version from WW2. Partial cpy of
manual--$125

National NC-57--Good cosmetics--recapped. Works very well on
75AM-manual cpy-$75

Source record: 108393

I just noticed that the Clegg 22er (I'm guessing from the same era) uses 8, 12, or 24 mHz crystals. Sure would seem to generate a lot of extraneous oscillations with that sort of design, guess filtering kept them out of the radiated signal. 73, DavidC AA1FA

Does anyone have the schematic for a TBX-6 ( CG-43005C). I have one of these in mint condition and would like to get it operating. I think it would look nice next to my FT-840.

O TEMPORA! O MORES!

I think we are missing the point here. This is not an ethical bidding practice. Period. It does not truly permitt a level playing field if you would. In essence it becomes a game of he who has the best computer algorythm and modem line wins. It works against the spirit and purpose of this type of auction. Clearly it works to the disadvantage of the seller. The seller is denied the additional monies he could earn if other bidders had the time to respond to this unethical predatory bidding practice. In that it vitiates trust in the financial market which we call e-bay with obvious short term and I contend potential detrimental long term effects. E-bay says that reserves are not to be encouraged. Yet what seller in his right mind would sell without one, if this practice becomes the normal way of doing business? And if this practice is permitted, what bidder if he wants to "win" would bid at any time before the end of the auction? Why waste the effort? Anyone who bids beforehand becomes a sucker. If everyone played by these rules, maybe and only maybe, would I not have ethical concerns My interpretation of E-Bay rules is that they wish to have the greatest number of participants. Not only because this is in E-bay's own self interest, but possibly secondarily because it fosters hobbies like radios, clocks,etc. It provides a forum for the disemination of knowledge about these hobbies and a means of education to newcomers which would not otherwise not be as accessible.Often it provides them and all of us access to those with much more knowledge in a given area. One of the more pernicious aspects of permitting this form of predatory bidding is that it has a delatorious effect upon the open disemination of knowledge, and the maintenance and increase in the knowledge base associated with our hobby. How many times will it take for a newbie to get slammed by one of these predatory sharks before he/she says to hell with e-bay and to hell with this hobby? There are some of us by virtue of the code of ethics of our profession cannot participate in a financial market where unethical practices are condoned. I am a CPA. I am proud to be one and take the responsibility entrusted upon my profession by society quite literally. As set out clearly in our code of ethics, CPA's have a fiduciary responsibility to the general and investing public that financial markets operate efficiently and in an ethical manner. It is antithetical to the need for public trust in my profession, for me to participate in financial market where unethical practices and behavior, once surfaced, is tacitly condoned. While this is just my stand on this issue, I am inclined to inquire as to the State Board of Accountancy for guidance pending E-bay's stand as evidenced by an instance their decision on a matter which I brought to their attention today.

And the practice is widespread. Cataline is not only among us and based upon Steve's e-mail and something I brought to e-bay's attention today,

he is breeding. What follows is part5 of a letter which I addressed to a seller concerning this issue today.

Thank you for your response. It confirms my feeling that this is an unethical bidding practice. The more interesting question is what e-bay will do in this instance. It is nothing which you as a seller can do anything about, though it has both direct and indirect ramifications to you as a user of e-bay. The direct ramifications are obvious. Anyone who uses this predatory vehicle to the extent that this individual has is not a collector. The income stream requisite for his volume of purchases ( approximately $2,000 from you in the space of two days and 262 positive responses over 6 months suggests a huge volume of purchases given one does not have a 100% response rate) implies either great personal wealth, which I have no problem with, or the use of E-bay as a defacto wholesale market.

E-bay's response is the crutial one in my opinion. While it may have become a practice to scan the "going going gone" section to see what one may have overlooked and bid accordingly late in the game, this practice may be annoying but is not reprehensible as it always provides other bidders a chance to respond. Certainly, it is common practice and one to which I both subscribe & utilize, to bid a high opening amount to potentially forestall other bidders. Yet in this practice, the seller has no additional risk, in that he is protected by his reserve which guarantees his investment. On the other hand, the bidder assumes additional risk as his maximum bid is generally more than the amount which he would normally be able to pay. I would tend to disagree with you that setting a higher price would discourage this. Setting an even higher price which far outstrips what one thinks is reasonable to counteract these practices does both a personal and public disservice. The personal one is obvious. There are few things, however scarce or rare and save those which have nonmonetary import, that one should consciously spend too much on. The public disservice is that one is contributing to price destabilization. You can look into the distant past, the tulip craze in the 1700's, or the speculative home buying in the 1980's, to see what eventually happens. the market collapses at some point and both buyers and sellers are harmed. (This is akin to the old adage "Seducing a drunk woman is as satisfying as winning a deep philosophical conversation with a dead goldfish. And besides she may throw up) Also the strategy of a higher opening bid is ineffective. The ability to consistently place a winning bid within the last 1 minute of an auction, suggests either a physical skill set akin to that of a professional athelete, or the use of a computer implemented algorithym. (Taking the aforementioned adage one step further, one has now potentially added computer precision to the efficacy with which retribution is now delivered. While there may be some justice in this, unfortunately for whatever reason, the guilty often have the ability to duck and the innocent are often in the line of fire).

The question remains what should be done. Should E-Bay be a vehicle for hobbyists and collectors not only to purchase items but also as a de

facto forum to disseminate knowledge. I would suggest that it should. This is one of the great things which e-bay offers us as a collecting community. It is important. It should be safeguarded. Those who threaten it by their egregiously acts should be permanently banned. Period.

I recieved several letters from people thanking me for this post
recently, so I thought I'd post it one more time.
Hey guys and gals I found a really cool site that sells plaques.
They make it using a copy of your FCC license. Very nice plaques
high quality. Check it out a link is on my ham radio page.
or go directly there at
http://www.awards-r-us.com/wireless/products.cfm?siteid=3121
or my page at http://www.flinet.com/~duane/ham/ham.html
They also make other award plaques, so book mark them for later use.
72's
duane

# 4103. FS: Unbuilt Heathkit SB-221 Linear Amplifier

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-03-16 00:00:00 UTC
From: robcap@aol.com
Message-ID: <19980316013100.UAA16600@ladder03.news.aol.com>
Source record: 108447

Hi Folks:

I'm doing some spring cleaning, and am selling an unbuilt SB-221 linear amplifier. The kit is a duplicate, and I'm making a little room. This is the work horse linear that delivers 2000 watts PEP and 1000 CW running a pair of 3-500Z finals. The amp can be wired for either 120 or 240 VAC. The kit is completely unbuilt and unstarted. The parts are packed in their original undisturbed configuration.

In the interest of full disclosure, the kit has one oddity about its history. It was kept in an outside radio shack out-building in Arizona, where apparently some mice visited, and nibbled the top flaps of the shipping box (can you believe it?). Also, there were some mouse droppings inside the kit on top, which I've cleaned up (kind of ten-year old petrified mouse droppings, yuck). The transformer comes in a separate box, and is untouched by man or mouse.

Otherwise the kit looks perfect. The panels are all wrapped in original plastic, and the boxes are still taped shut. The unit does not have the optional 10 meter kit that Heath supplied with proof of license. However, it does include the spare manual for the SB-220 to facilitate adding 10 meters, if the appropriate parts could be obtained.

I'd like to take offers on this kit until Wednesday. The minimum amount I'd consider selling the kit for would be $1000 (including UPS insured ground shipping in the continental U.S.). Also, given the sum involved, I'll hang on to the kit until I've received a certified check or money order. Please forgive me, but I've just had my first experience of non-payment on the Internet.

I'd also be happy to entertain offers that include other unbuilt kits. I'm particularly looking for the following kits: SB-100/101/102; HW-104; SW-7800; SA-2500; SB-313; HO-10; HO-13; SB-620, and HO-5404.

It's rare that I ever sell a kit, but may have one or two other units for sale in my spring cleaning.

Contact: "robcap@aol.com".

73,

Rob, W3DX

While that is no doubt true, it would remove all the advantage the buyers have at present. There is much complaint that ebay is biased towards the seller and itself. This seems to be true, and is as is should be. After all, this is a business thing, not a charity(or a "hobby" as so many indignantly maintain). What you propose just serves to increase the unfairness to the buyers. What little benefit there is to be gained by limiting the last minute bidding to the quickest and sharpest "last minute guys" is totally removed by extending the time. So now only the totally clue-less buyers and the deep pockets will scarf up the better things. I think you would surly be doing the buyers a big disservice in the interest of some kind of "fairness" ideal!

Body handling: Binary attachment payload not displayed: vcard.vcf

FS: Collins Antenna coupler CU-168/FRR.

Each unit can feed 5 RX from one antenna.

Two units, one manufactured by Collins and the other by Hugh H. Eby.

Units are in fair shape with one 5U4 tube missing each.

Also, one unit has un cover missing.

Make a good offer, and they will be yours.

Regards.

[One or more binary attachments are retained only in the source text.]

E-Bay uses a "proxy bidding system". They encourage the "proper use of the system" and discourage "sniping". Sniping by E-Bay's own admission is not a "proper use of the system". Rationalize it any way to choose, it is not an ethical bidding practice. It is cheating. If you go to an auction, you play by the rules. They don't let you cheat at a live auction. You shouldn't cheat at a proxy auction. Just because E-Bay does or doesn't do anything about it, doesn't change the fact you are not playing by the rules. Personally, I will not cheat and will not participate in auctions where it is tolerated. It is a personal choice. If you choose to cheat and/or participate in auctions where it is tolerated, that's up to you.

# 4120. Help with SR-150

Newsgroup: rec.radio.amateur.boatanchors

Source record: 108217

I'm looking for the same for my TBX-5! One thing to watch on the TBX radios is the tuning dials use radium paint. It doesn't pose a hazard just sitting there, but if you touch it, the paint may flake off and then you can ingest (swallow) it accidentally. Not a great idea to have long half life radioactive materials inside your body.

It does not seem to me that any ethics are involved one way or another as to the time someone bids. What is a problem is how ebay works. What live auction have you ever been to that the auctioneer gavels down his hammer down wherever the auction is in say, exactly one minute, even if bidding is still in progress? Of course it doesn't happen! This practice is bad for buyer and seller.

Ebay has a great service going but the EXACT TIME auction is unfair to all. The problem could easily (well I am not sure of the programming involved) by EXTENDING THE AUCTION FOR 3-5 MINUTES EACH TIME A BID IS MADE AND LESS THAN THIS TIME REMAINS. You'd still have to be there at the end if you are serious BUT you wouldn't have the door slammed on you. You get to buy it if you are the one that wants it the most and the seller gets the true auction value of his item. This may not make things cheaper but it would make them much fairer

On Mon, 16 Mar 1998 16:25:07 -0800, James Schwalbe
<jsbooboo@ix.netcom.com> wrote:

I think you should chill out with a Prozac capsule or two and a bottle
of Old Grand Dad. I think you're upset because you've lost out in
bidding on an item or two you wanted. Actually instead of it being
"unethical" I suspect it's just one of the pitfalls of electronic
commerce.

I see the *SAME* complaints in the stock newsgroups about E-Trade (an
on-line stock broker) as I do about E-Bay , namely that people can't
get through at critical times. I just place the *highest* bid for an
item that I'm willing to go and then sleep like a baby, if I win so be
it , it not I'll probably find the item on usenet or at a computer/ham
swap/show for less $$$$$$ anyway. My usual procedure is to buy on
usenet/Pricewatch and sell on E-Bay where people get *EMOTIONAL* ,
they let their EGO outweigh common sense and usually bid too much for
an item as they quite often seem to resort to the " I'll Show Him
!!!!." type of mentality. A lot of Auctions operate on human
vulnerabilities , who in their right mind would pay some of the
outrageous prices you see on Sotheby's on occasion when they auction
off something of REAL value, like say Jackie Kennedy's nose hair
clippers for $900.00.

I also think you're all *WET* wrt to E-Bay being some kind of
educational facility "dissemination of knowledge" for various hobbies
, it's an *AUCTION*, but no matter what you must have been *REALLY*
frosted at losing out to another bidder to attempt to compare the
Tulip Bulb price collapse which affected a whole nation to lowly E-Bay
of which probably 90% of the US population would have *NO* idea what
you're talking about.

Chill Out Dewd .....

# 4142. Hallicrafters SX-101-A Opinions

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-03-17 00:00:00 UTC
From: am609@yfn.ysu.edu
Message-ID: <17F1C6F24S86.TCNET058@ysub.ysu.edu>
Source record: 108283

I have a lead on a SX-101-A RX at a good price. However, I am not real sure about the Hallicrafters as compared to a Drake 2B. I used a 2B for quite a while when I was first licensed back in 1972. I liked it so much I moved up to a R4C (Which I am sorry I ever sold).
Opinions on the 2B vs SX-101 are welcomed.

Thanks and 73s

I have a scarce Collins 75A2-2A receiver modified by collins.
This is their prototype for the A-3, with the filter selector and all mods for the A-3 installed by Collins...Also have the original manual, and cabinet...comes with the 3.1 filter.

Face on Radio is excellent, cabinet has no dents or dings, but could use some paint on the side.

Price is $495 pick up only in the NE area.....

73...Jim

I haven't ever owned a 2B but I did have two different R4B receivers. I currently have an SX101A and an SX101 Mark III upgraded by Hallicrafters to an SX101A tube complement.

Although I never did a side by side comparison of the two I feel they are about the same. If I were force to choose one as the best it would probably be the R4B, but not by much. I work mostly CW and both have all the necessary IF filters, notch filters, etc to get rid of interference. My SX101, in a side by side comparison, has all the dynamic range and sensitivity of my Kenwood TS830, even on 10 meters.

On the other hand an SX101 needs to be tuned up, with good tubes. I have an SX111 which needs this. Also, this generation of Hallicrafters receivers had the first local oscillator as the highest frequency and tunable. As a result, some instability can develope on the most commonly used bands (I call it the Hallicrafters 40 meter disease). Usually reheating solder joints on the oscillators RF coils will solve the problem.

BTW, I consider a good price about $100 for one in decent shape.

Good luck and keep those boatanchors afloat,

Tom

# 4166. Hallicrafters Paint Answers

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-03-18 00:00:00 UTC
From: Terry@electrosys.COM
Message-ID: <c=US%a=_ecs%p=ElectroSys%l=WEBMASTER-980318015153Z-363@webmaster.eletrosys.com>
Source record: 108225

Due to multiple requests for what I found out about Hallicrafters paint,
here is the information gleaned from the request for info about the
proper paint for the semi-gloss black used by Hallicrafters on their
radios. Thanks to all who contributed freely to this question . . . . .

Contact R&R Designs in Marshall, WI - they sell paint for Hallicrafters,
Johnson, Heathkit, etc. The owner's name is Rob, WA9ZTY.

73,
Mike W5MAZ
(a satisfied customer)

*****

Try R&R Designs for the paint you need at REHummel@aol.com

Lenox - WA5OVG

*****

Terry
You could call WA9ZTY @ R&R Designs 1-800-372-4287
Or
Try Krylon #1613 Semi-Flat Black
Or Folk Art #12109 Licorice (Found this at Wall Mart Craft/Sewing
section)
Many of the Halli actucally have different hues of paint which makes
matching difficult. I had two SX 71's -one appeared to use a slight
metal flake in the paint, the other was semi-flat black.
You really need to look close to tell the difference.
Mike
Le Claire Ia

*****

Terry,

Someone at a hamfest said that they used a high temperature exterior
paint
for barbecues, lawn furniture, and such --- either Krylon or Rust oleom
(can't remember). It was available in semi-gloss. Source: Home
Depot...

Ted N2VPC

*****

Terry,
In my experience there are actually two colors, one is a satin black, the
other a dark gray. I have found excellent matches from the local 'hardware
store', at $3 or $4 a can. Or you can get an exact match from R&R designs,
for a little more.

The 'hardware store colors are: for the dark gray: "Krylon MS 769
Anodized Bronze", for the Satin Black: "Rustoleum American Accents 7946
Canyon Black Satin". I have done a couple of radios in the Krylon and the
match is good enough to make invisible 'overspray' blend lines. Can't say
that the Satin Black is that good, I have used it only for complete cabinet
refinishing (SX-42). Made a nice match, but I painted everything.

Good Luck!

Harry KG5LO
Saline MI

*****

Rustoleum # V7777 "Satin Black" is as close to a perfect match as
possible for the SX-101, HT-32/33/37. I got some from R&R Designs with a
metal flake which was supposedly for the SX100 that he thought would be the
same as the 101. (wasn't). The Drakes will take the same, but it won't
give the mottled appearance that some have. (unless you can figure a way to
be splotchy on purpose)

# 4169. FS DX-100 AND HQ-170

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-03-18 00:00:00 UTC
From: imok1@aol.com
Message-ID: <1998031804320801.XAA22027@ladder01.news.aol.com>
Source record: 108228

I have for sale a Heathkit DX-100 and Hammurland HQ-170.
The neither has any extra holes to the cabinets or front panels. The HQ-170 is working and the DX-100 has never been turned on. Both need minor TLC, and have manuals for both.
Would prefer local deal on the DX-100 due to weight, approx 110 pounds.
DX-100 $125 plus ship from 60067
HQ-170 $160 plus ship from 60067

Thanks
Mark

# 4170. BoatAnchor Description Standard

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-03-18 00:00:00 UTC
From: Ben Wallace <bwallace@sd.cts.com>
Message-ID: <01bd5227$5deda720$3506a3cd@bwallace.cts.com>
Source record: 108229

There doesn't seem to be a recognized standard for "grading" the condition
of BoatAnchors.
One person's view of "excellent" can be quite different from anothers'.

I would like to suggest that the majority of "we of the
rec.radio.amateur.boatanchors" try to agree upon a standard of grading.
Is this a feasible idea? I don't know how the "mechanics" of this approach
can work.

Is the Collins CCA grading standard appropriate for use????

Any ideas? Suggestions?

>

I have one of each. My SX-101A has been recapped, re-tubed, and
aligned, and works as well as any SX-101A ever did, which is to say it
works very well. I truly love my old SX-101A. But it simply cannot
hold a candle to my Drake 2B. I will freely admit that the SX-101A
looks cooler, and is a lot bigger, and weighs a lot more. The little
Drake, even with the 2BQ speaker/q-mult sitting beside it, looks wimpy
in comparison. But it beats the SX-101A hands down in nearly every
area of performance:

1. It drifts less.
2. It's more stable.
3. It has better dial precision.
4. It has much better selectivity, even w/o the q-multiplier
5. The q-multiplier makes it even better. It's a CW operator's dream.
6. It can cover more bands by adding xtals. In addition to the 80-10m
bands, I have the 17 and 30m WARC bands, as well as a couple of
shortwave bands, and I can receive WWV on 10 MHz.

There is one area where I believe the SX-101A wins, and that's AM
reception. The AM fidelity is a bit better on the Hallicrafters,
mainly because it has a wider IF. Still, the 2B is OK.

Of all the boatanchors I own, or have ever owned, the little Drake 2B
is my very favorite. My advice would be to buy the SX-101A and then
start looking for a Drake 2B, preferably one with the q-multiplier.

Hi Ben
I've been wondering about that myself. About two weeks ago I re read
the CCA descriptions and find them useful but it seems extremly
stringent on definitions (too tight) for my satisfaction.
I feel that it was written primarily for a COLLECTOR of equipment rather
than a USER of amateur gear, big difference. I've sold & bought some
really nice equipment that would not qualify as CCA mint but as a user
and seller it was mint in my book. Mabe we do need a "standard" for
users as opposed to collectors.

Both the Collins Collectors and the Leica Collectors agree-
MINT means MINT!!

If you have extremely clean, spotless equipment, it is generally
safe to call it very good - excellent.

Most of our gear is in good-very good condition and there's not
a damn thing wrong with that. The word "mint" is used a hundred
times more than it should be. I personally DO NOT use the word
unless the gear is NEW! I use "nearly MINT" for gear that has
even been demonstrated. I have found in the camera business that
SOME fool is going to give you grief if you call it MINT!!!
The audio and camera folks have the worst track record in over-
representing condition, the Collins folks are the MOST conservative
I have met, usually, if you really PIN THEM DOWN!!

Lets use the Collins gradings, by default. They're honest, available,
and at least 25-50% of boatanchor types have heard of them!!

73, Walt

I recently acquired a Eico 955 In-circuit capacitor tester. I am missing the original test lead, which after reading the manual apparently is a special (special length type etc...) cable which was provided with the unit when new.... If someone has the construction manual, could they copy the instructions on making the test lead for me.... I'll pay ur costs plus mailing. OR if someone has a "spare" original test lead they can part with I'll buy it from ya.

Thanks es 73 de Mike Melland kb9qhu

From: nick@cs.unc.edu
Message-ID: <6eoqm7$dv5$1@altair.cs.unc.edu>
Source record: 108243

There was a big discussion on this very topic back on the original "boatanchors" mail list 1994-95. We even created a separate mailing list "baratings". We came up with one proposal but nobody was ever entirely happy with the results. The CCA ratings came out about the same time and it seemed easier to just go with that even though it has more emphasis on appearance than operation.

The one thing we all agreed on is that the system needs publicity and examples. This was before the WWW so we talked about printing up pictures to post at hamfests. Nowadays a WWW site with photos showing examples might be a good idea.

I'll be glad to send a copy of all the discussion if anyone seriously wants it.

For what it is worth, though - here is the proposal we worked up (initiated by Tony K4KYO I think)
73, Nick

BARATINGS Feb 6 1995
---

LOOKS? WORKS?
---
A Perfect - no flaws 1 Meets all Specs
B Only very minor flaws 2 Minor alignment needed
C Minor scratches (avg. 1/4") 3 Minor repairs needed
D Serious scratches (avg. 1/2") 4 Major repairs needed
F Cabinet/panel damaged/wrong paint 5 not repairable

/R suffix = cabinet/panel touched up, restored
/M suffix = has some non-factory modification

Examples -
A-1 is the rig that sat in the box 30 years but has been tested recently
A-1/R is a professionally restored S-line
B-2 is well-treated used gear
C-3 is typical hamfest gear, probably works but needs a tube or new filter cap
D-4 doesn't work but could be made to work if you have a parts rig
F-5 is for parts to fix a #4 rig

I think this idea has a lot of merit. A standard (strict) will hold all parties to a fixed definition. It will allow a potential buyer to get a fairly good mental image of the item being sold without actually seeing the item. A strict definition can be "modified" through the use of terms like "almost", "not quite", "better than", "less than" , etc.
A set of loose definitions would serve no purpose. They would be too vague.

Hi, all!!
If you have any AN/ARC-5, SCR-274-N stuff laying around the shack...I want to buy it! Xmtr's, rcvr's, control boxes, cables, wiring, dynamotors, racks...anything! If you have any old dead ARC-5 chassis laying around, I'll take those, too!
Just e-mail me (reply or address below) with what you have and I'll make you an offer. Naturally, I'll pay shipping. Clean out that shack and make some money.

Buy an LS 166 surplus speaker with cord and plug, they are plentiful and reasonably priced. Fair Radio probably has some. It will plug right in and work as is. looks real authentic too. Swap meet prices are around $10. Power is 28 VDC, but I forget which pins. It runs, but poorly, on 24 VDC.
73,
Mark

# 4200. FREE: CAPS FROM L-4B POWER SUPPLY

I think it is a good idea to adopt the CCA standards. The CCA standard is very tight on "mint" meaning "NIB" but that is ok for me. We got the problems with different "mint" condition by different sellers. We don't have them anymore if we agree to use "mint" only for "new-in-box" and "excellent" for all others.

# 4215. Hallicrafters SX-43 Tuning Error

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-03-19 00:00:00 UTC
From: mgilmore@wbez.org
Message-ID: <6esn23$cla$1@nnrp1.dejanews.com>
Source record: 108155

Hello to All,

Miracualously, after shoveling out a lot of dirt, replacing the power cord and giving the bandswitch a couple of squirts with the wonder drug De-Oxit, my SX-43 which was found in an alley WORKS!

However, there appears to be an error in the tuning. On the AM broadcast band, the dial sits about 30Khz low (e.g., station AM1000 shows up at 970),. and on the Shortwaves the error appears to be about 300 KHZ (tuning to 10Mhz WWV).

I don't believe that the Main Tuning or Bandspread dials themselves are out of line, because the both tuning capacitors are fully meshed at the "bottom" of the dials. Also, the Bandspread is out of the circuit when the rig is set for AM Broadcast band.

Without running the risks associated with a full blast alignment on this classic, is there an easier solution to this? I do not have a full operating manual for the SX-43, just a service bulletin. Specifically, should the Bandspread Dial always be set at the bottom (fully meshed) position when tuning around the shortwaves, or is there a different setting for the Bandspread depending on which Shortwave band one is tuning?

Sorry for the verbosity, but I hope to be giving as much information upfront as possible. I am quite glad that this rig basically works... The Green lights from the dials and meter go well with my Heathkits.

TNX es 73,
Mike, KE9EX

Just in case you aren't aware of it, the UPS site is a convenient way to
see what's going on with a package using it's tracking #:

http://www.ups.com/tracking/tracking.html

Here you can keep tabs on whether the item was actually sent and exactly
what time it arrives at the UPS depot.

For Sale: Eldico Set - Station Console model M-135, Receiver model R-104,
Transmitter T-102, & transmitter power supply P-109.
These units are in good condition both physically and electrically. Covers
80-10 meters SSB, CW and AM. This is a copy of the Collins S-line manufactured
by Radio Engineering Laboratories, Inc. Long Island City, NY, Maufactured 1960.
Can supply photo's if you need. All interconnect cables and manuals included.
Looking for collector and best reasonable offer.
Thanks for reading.

# 4224. fs-Drake WH-7 & MS-7 reduced

Hi Guys;
I have reduced the prices on these two items a bit, hopefully they will get a good home this time.
Drake WH-7 wattmeter, $80 shipped, no manual!
Drake MS-4 spkr $55 shipped, no manual!
These prices are firm and only shipped Conus for these prices.
Thanks es 73....Rich WA2RQY (1961)

Howdy all....Restoring an old Marconi (Marked Canadian Marconi) SMR3 ships main receiver. Pretty well done but don't know the vintage of this old receiver...guessing 40's here. Wonder if anyone knows or knows of any Marconi collector / interest groups...so far have struck out on web and news searches. Anyone with Marconi marine (MIMCO) or info...drop a line :)

# 4238. Help ID these UTC/Kenyon Xfrmrs

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-03-19 00:00:00 UTC
From: nobody@nowhere.com
Message-ID: <6erkbu$qgg$1@hardcopy.ny.jpmorgan.com>
Source record: 108340
Cross-posted to: rec.radio.amateur.boatanchors,rec.audio.tubes

Hi folks,

Picked up an old 811 based rig that has these beefy transformers in them.
Would appreciate any information you have on their function/ratings and
possible other uses.

Transformer #1 - Make= Kenyon (NY), Model = T-478
---
Big Iron...size is about 9" tall x 7"w x 6"d

Has these contacts: P, P, B, B, C, 3500, 5000, 7000

Each P contacts were connected to the plate of an 811 TT
The two B contacts were joined together, then lead outboard the chassis.
The P,P,B,B contacts have common continuity
T C, 3500, 5000, 7000 contacts have common continuity
The C and 5000 contacts were lead outboard chassis for connection.
The 3500 and 7000 contacts were unused.

I suspect this is a power transformer, so I put 120 vac across
the C and (individually) the 3500, 5000 and 7000 taps. It became
clear that the common B&B is a center-tap to the P-to-P readings.

| Input 120vac between C and | Output Voltage Between P & P | Output Voltage Between B&B and a P |
|---|---|---|
| 3500 | 232 vac | 116 vac |
| 5000 | 196 vac | 98 vac |
| 7000 | 165 vac | 82 vac |

Do the 3500, 5000, 7000 relate to the amperage ratings of this xfrmr?

Transformer #2 Make = UTC (New York), Model = VM-2
==========

Squarish black package about 7"x6"x5".
Has 12 contacts numbered 1-12

Contacts 1-6 have common continuity
Contacts 7-12 have common continuity

A couple of the contacts were connected directly to the respective grids
of the two 811 tubes.

Is this an interstage transformer of some type?

Any and all comments are most appreciated. Please post here..or
email me but you must unscramble my anti-Spam defense:

lew/is@jp/mor/gan.com

Thanks!
LK

# 4239. Re: Oh No HRO 500 Crisis

Source record: 108341

I believe the problem is that the 500's transistors are germanium, which
are not manufactured anymore. The NTE equivalents might not have
the high frequency response or the beta tolerance is so wide that the
bias has to be modified.

You can easily substitute better, and cheaper silicon transistors. The
bias has to be modified, however. The silicon Vbe is 0.6volts vs 0.3volts
for germanium's

From: Pushpendra S Khaira <singhpk@ix.netcom.com>
Message-ID: <35116573.5B88@ix.netcom.com>
Source record: 108342

hello everyone,

What is the best way to power a R392?

I have tested it using two 12 volt gel cells, but that is
far from satisfactory experience, though it works.

I guess a 28 volt /3-5 amp unregulated lines PSU would be the
right choice.

A switching PSU would be a bad choice.

I would like to hear your thoughts .

thanks

I have opened more boxes of my Dad,s estate and here is what is
available:

B&K Solid State RF Signal Generator Model E-200D
100 khz to 216 Mhz
-106 to + 2DB out
Output level meter
Crystal Calibrator

Appears to be new in the box $75.00

---

B&k Semiconductor Tester Model 530
in/out of circut to 1500 Mhz

Appears to be new in the box $50 (cost $445 in 1985)

---

B7K Solid State Dual Trace Scopr Model 1479B
DC to 30 Mhz Dual trace 5" CRT

Appears to be new in the box $125 (cost $705 in 1985)

---

K-Enterprises Model 4X6 Digital freq counter
250 Mhz
6 digit 7 segment readout
top horz segment of first 7 segment indicator not working

Like new physical condition $40

---

NOVEX Grid Dip Meter Model DM-4061
1.5 to 250 Mhz
This is same as MFJ 201 Meter

Appears to be new in box $75

---

Micronta 22-175 LCD DVDM
Hi Res Volt Freq Meter
1000 DC, 750 VAC, DBM -27 to + 54
Measures capacitors 4pf to 400 MFD
Freq 20 Hz to 2 Mhz

Appears to be new in box $50

---

ICOM IC21A 2 Meter Transceiver 24 channel with xtals
including DV-21 Digital freq generator for cont coverage 146 to 148 Mhz
Transceiver works very well transmitt and receive
Digital generator has intermittent output of 18 Mhz transmitter drive
receive output ok

With all bools and diags. $50

---

Swan 500CX 3.5 to 30 Mhz SSB Transceiver with 117CX power supply and VOX
unit
500 watt PEP so the book says looks very good no dings or wear marks
Works OK

with all books $200

---

Clegg 27B 2 Meter Transceiver with Clegg 20 Amp 12 volt supply and Clegg
Mike

I just located this one (this is the second one I have found in his
stuff)

Very good condition with all books $75

---

Simpson Model 260 VOM with Model 150 AMP-CLAMP Adaptor
Clamp on Amp Meter goes from 5A FS to 500A

Both items are orginals and in very good condition

with books $85

---

Orginal VIBROPLEX KEY Do not know just how old but has old style paddles
and I have seen it for past 50 years SN 159005

Chrome model no rust with 2 very tiny chips in black crackel base
about the size of a pin head

$75

---

MFJ Model 442C Keyer Bencher Style

Very good condition and works fine $50

---

All equipment is sold on a as is basis and I will give you all the info

I worked for a division of Canadian Marconi for about 8 years.
Did ship work on Marconi (M.I.M.Co, Ltd) of Chelmsford, Essex
England gear. Nearly *all* their stuff had "names" as well as
model numbers. Can you describe the panel layout, bands covered etc?
Could be an "Atalanta", "Mercury", Electra", "Elettra", "Monitor",
"Apollo". These were the most common in the Marconi supplied stations.
They occasionlly used the Eddystone 830/7 and the 940 receivers.
73,
Sandy W5TVW

Last I got it (July 1994), he had a packet of mods, articles, and tips
that he photocopied for a nominal $15 copy fee (it's a big packet).

Mine was a bargain price basket case, but I persevered and got everything
fixed and have done the most important mods. Interesting radio for its
time, and a decent performer, but lots of rough edges. Not the least of
which is the way too hot receiver - full of MOSFET mixers, thus really
crumbles in a busy band. But still fun.

Sounds like you have a Class B modulator. Both transformers are audio units.

The T-478 is the modulation transformer or "mod iron".

The P terminals are the primary plate connections.
The B terminals are the primary B+ connections.

The C terminal is the secondary winding start.
The 3500, 5000, and 7000 terminals are taps on the secondary at the respective impedances.

The VM-2 is the driver transformer.

If they are in good shape, these transformers are much needed by the AM gang. Please take care of them! I don't know going prices. Will look in my old books for more data.

Source record: 108161

Hi Guys,
I have a Hammarlund HQ-170 that is in need of some repair. I have found a copy of the original manual which is on the way thanks to Charlie KD4AJ, but I was wondering if they ever made a service manual for this receiver? It needs a total alignment after one of it's past owners "tuned 'er up" by backing several slugs out to the point that they came to rest against the shield covers.(another case for licensing tuning tools!) Also the 100 Kc calibrator and slot filter are both non functional. Any info on where I could find the alignment proceedure and ideas on repairing the calibrator would be great!
Thanks in Advance, Jack Kauker N3DQZ

Source record: 108169

I have a nice HD-1410 keyer that I picked up at a hamfest.
Generates dots and dashes just fine, sidetone works. But I think
there is a problem with the output circuit: A VOM across the output
shows a "key up" resistance of about 5K ohms. Goes to zero key down,
but it seems to me that it should be higher on key up.

I'm flying blind here without a schematic. Anybody have any words of
wisdom on what the output is supposed to look like? Or what they have
in the output circuit?

Thanks, 73 Bill N2CQR

Replace all the tubulars with the high quality caps. Polypropylene seems to be the high end, but may be over kill for this application. Like putting MIT Multicaps in a Westrex Movie projector, no? Mylar, polystyrene are are good. And if you buy them in quantity, you can get them for pennies. Newark often sells Sprague Orange Drops by the pound. And if you do a lot of this kind of work, you'll find it a good deal.

As for attachment points, you are right, keep the leads short, and where they are sheilded retain this design. But for the most part, the original attachment points can be retained. Remember, however that in some cases, the path the leads were routed through the circuitry, and especially the proximity to the chassis, was often used to reduce noise and enhance stability. So if you can obtain pictorials of the original wiring, that will help with your stability issue. Also in some of the early receivers a makeshift capacitive coupler was made between non critical stages by simply twisting a pair of single ended wires together. As the sheathing on these wires age, the wire itself corrodes and the twist moves with respect to the other elements in teh circuitry...this alone can make your receiver unstable. So, a good visual inspection is important.

good luck.

Howdy Gene....I don't know your receiver but do some restoration / repair work here....Think my first priority would be to identify what type of instability you have....is it short term drift, long term (couple of hours) drift, microphonics (turn volume up and you hear feedback) or instability due to mechanical probs (jar the bench and the receiver jumps all over the place) or a capacitive coupled problem (you touch the panel or knobs and the receiver changes freq). Replacing all the cap's on spec seems to be a popular notion but I rarely see it needed myself. Try to do this logically and you'll learn more about your receiver.

Have fun....Keep on Tinkering

# 4280. FS: New 7534, 8068

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-03-20 00:00:00 UTC
From: MLJS45A@prodigy.com
Message-ID: <6etv1m$4feo$1@newssvr03-int.news.prodigy.com>
Source record: 108177

FS: New 7534s

I have 8 new and 2 possibly new (may be slightly used) 7534s, mostly
Amperex PQ tubes made in England or Germany. Beautiful tubes, AES sells
them for $37.20 ea., I'd like $29.50 for new and $15.00 for used.
I also have 6 GE 8068 pass tubes, all new in original boxes, AES wants
$50.00 ea., I'd like $40.00.

Shipping is additional. Please e-mail me if interested, thanks!

Jim McShane
MLJS45A@prodigy.com

# 4282. Re: r 392, how to power it

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-03-20 00:00:00 UTC
From: Pushpendra S Khaira <singhpk@ix.netcom.com>
Message-ID: <35127F72.257B@ix.netcom.com>
Source record: 108179

hello,

Is it possible to power the heaters off 25.2 volts/3 Amp AC ?

I would like to power the rest from a separate 28.5-32 volts
linear(regulated or unregulated but well filtered 500 mA) suply ?

That is what I want to do, but dont know how, as I dont have all
the connections for the R392's power socket .

Incidentally, what is the downside of using voltages above 32 volts,
say 48 volts or so for B+, if you have a separate 25.2 volt line
for the heaters ?

Is there any point in using more that 30 volts for B+ ?

I would appreciate your thoughts on this

Thanks to everyone who responded to my earlier post

From: David Stinson <arc5@ix.netcom.com>
Message-ID: <35128689.2E59@ix.netcom.com>
Source record: 108180

If anyone is interested in old CBs, I have several old
Johnson Whiteface, Blackface and early Messengers.
Also a couple of other brands.
They are mostly projects or parters. If you can
pick-up in Austin, Texas or if big shipping bills don't
scare you, I'd like to talk trade or sale with you.

FS: Zenith Trans Oceanic Royal 7000, model D7000Y in excellent condition. Radio
plays great; strong, clear reception. Entirely complete and original, including
AC power cord, battery box in good condition, and unmarked logbook. Telescoping
whip antenna is complete and perfect.

Front panel is perfect; no flaws of any kind. Dial and chart lights work
perfectly, as does the meter and all controls. Outer case is excellent. There
are several 'dings' in the Zenith nameplate on the front, and a barely
noticeable ripple in the top trim; you have to look for it to notice it.
Otherwise in fine condition; no cracks or chips.

You can see a picture of this radio at

http://members.aol.com/mikew26532/zenith.jpg

$325 + shipping from DC area. Email if interested. Thanks.

Mike

Hi----
Pick-up only--- in Greenville, SC(Simpsonville).
. Very willing to trade--what do you have? Very interested in
MacKay and Racal tube gear. Navy & Maritime gear. Collins
75A1/2, HRO's, 75A4 filters, coils for HRO 50/60 or other interesting
stuff(?).

National NC 303--Excellent electrical condx. works and looks great.
cabnet repainted and a close match to original-manual copy. $225

Johnson Valiant-Full output . Some re-capping and new heavier duty
relay installed. Panel looks good but cabnet
has some blemishes-manual copy. $275

Johnson Invader 200--Looks good but needs some work. 100W out on some
bands. Complete and will include a parts radio that has a cabnet,
front panel
and rf deck with many parts, knobs etc--manual copy--$275

Hallicrafters-HA-2&6 transverters with all tubes and pwr supply.
Complete
but untested. No dents but some paint missing--with manual copy--$250

Hallicrafters--HT-37--100W out on all bands. Audio needs some
attention.
Cosmetics very good. Complete with all tubes and manual copy--$100

Navy RBC--Black face-4-27MHz-works very well. All bad out of spec
resistors changed.
One bad meter and no cabnet. This is a RBC-2 and doesn't contain the
IF output
module so its a real early version from WW2. Partial cpy of
manual--$125

Message-ID: <3512980E.66A8A8ED@asu.uswest.net>
Source record: 108186

I am apparently a raw novice at all this, so here comes a really obvious question I guess: I am inspecting the TR-4 I bought, and notice that many of the tubes, finals included, have a fairly large black oval on the glass near where a small round element (heater/filament?) is. Wait, wait--they *all* have this. Is this normal? Is it a mark of a bad tube, or at least a well worn one? Last time I saw a vacuum tube in person was when the TV repairman came to our house, ca. 1970. What can you tell about a tube just from sight? Whew! I appreciate all the patience and help shown me in response to my recent posts. If someone can recommend a good book on vacuum/electron tube electronics, I'd be grateful for that advice as well. Thanks.

Will White

# 4290. WTB: Electronic T-R Switch / Manual

Am parting out an Apache and the the following parts are excess to my needs: (originally posted to Heathe List on tempe.gov

HV Plate Xfmr $40 (sold)
HV choke $10
LV xfmr $20
Low voltage choke $10
Vfo assembly with metal enclosure parts $15
Final PA assembly, sockets, tuning caps, tank inductors, RFC, parasitic chokes and heat radiating plate connectors, band switch, with metal enclosure parts $20
Front Panel $25
Meter $15
Cabinet (no rust, but could use paint) $35 (sold)
Tubes 5R4, 5v4, 6146X2, and all the small signal tubes (No EL34s) $20 (sold)

Sorry no knobs, dial drum, copper linkage bands or modulation transformer.
Will prepay USPS on the small items, buyer pays ups on the magnetics

tnx for the read,

73

> many of the tubes, finals included, have a fairly large black oval on
> the glass near where a small round element (heater/filament?) is. Wait,
> wait--they *all* have this. Is this normal?

Yes. That mark is made by the "getter", a tiny incendiary that is ignited inside the tube to burn off the last of the oxygen after the tube is pumped down to a vacuum. It's perfectly normal.

# 4293. FS R-390A service parts

Source record: 108191

I have a Gonset G-14 'Citizen's Coomunicator' BA CB rig I picked up for five bucks. It's in pretty rough shape, looks like it did service on a boat in VA. A number of the tubes have illegible markings, so I need at least a schematic, if not a manual. Neat little radio. In partiicular, one tube mystifies me, it *seems* to be marked 6SX6, but the 'S' could be and '8', or a '5', or a '6'. Can't find reference to such a tube anywhere.

Will White

> Will White

What you are seeing is the "getter". All vacuum tubes that I know about have one or more. The element you see is most likely shaped like a ring. This is put in the tube during manufacture and at first hold a small piece of getter materian, usually barium (I think). After the vacuum is drawn in the tube, the getter is fired. I believe this is done by shooting a beam of radio frequency waves (using a device called a bomber) at the tube and it makes the getter material flash and deposit itself on the inside glass. Once the getter material is in this state, it has an affinity for any stray gas molecules that are left in the tube after the vacuum is pulled. This action continue throughout the life of the tube. As the tube elements outgas, the gasses bind with the getter and keep the tube working right. In well used tubes, you can see where the getter has discolored or even partially disappeared. If you see a tube where the getter is completely white, for example, the tube is probably very gassy or the vacuum is gone. IOW, you want to see that black oval.

I have for sale 2 r390a's. One is in very good condition with top and bottom covers,utah plate, and black tube shields.This is a 1967 EAC version. The second one is also a'67 Eac no covers, repairable with 2 PTOs-one good and one no good. Tube shields are not black. Some minor parts missing-couple of rf slugs and springs and 2 crystals. The main problem with the second unit is the 10 turn stop mechanism is way out of wack. I think the "c" clamps are missing.Also, the s meter sticks.$700(Seven hundred dollars) for both-pickup only in Newark,Ohio(near Columbus)so that there is no misunderstanding of condition of units. I will entertain realistic offers. Thanks,Joe,WB8HWF

Source record: 108197

I have just acquired what appears to be a working SB650 digital frequency display from a hamfest last weekend, but I don't have any information about how to connect it to my HW101. In reading the description of this product from the Heathkit Amateur Radio Product History book, it says that the manual for the SB650 contained information for mating this unit to all of the popular Heathkit equipment of the day.

Does someone have either a full manual for this unit that they could reproduce for me, or at a minimum the instructions for how to connect to the HW101. I will be glad to pay for copying, shipping and time spent.

Thanks.

You can reply to me via e-mail:

Hello B.A;

Your skepticism notwithstanding, yes there are, indeed, new in-the-box
HRO-500's
around. The one I obtained had been stored for perhaps 30 years at the

Marine
Corps Supply Depot, Barstow, California. In sealed, dissicant-laden aluminized
bags inside corrugated boxes inside a wooden crate (typical military packaging).
It had nary a single 1964 fingerprint on it, and it has been working perfectly
since I first turned it on. These things are not valued by their relationship
to a modern receiver, of course. They have collectible, emotional, or sentimental
value mostly. But they still are a nice general coverage receiver.
One can only imagine the new and never-used equipment that our tax dollars have
purchased at incredible prices, still laying around in warehouses somewhere...

73, Don W6JL

This probably won't help any, but odds are the reason the slugs are stuck
are because they are broken. You gotta use the exact fitting adjustment
tool, or else they will break and get stuck. I'm assuming these slugs
are hex hole types. Wait.. you said "slot", but caution still applies,
use an exact fitting screwdriver.

Source record: 108121
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.amateur.equipment

I know I read somewhere that the crystals in these two Regency rigs may not be compatible - true or false?
I know neither is a state-of-the-art rig, but for bang-around simplex and non-toned repeater mobile use they should be fine.
I have a 52-52 pair in the HR-2A I want to put in the HR-2B, neither is working yet and I'm trying to sell the HR-2A and want to make the swap for a different pair before I sell (if they will work OK).

Tubular - I assume you mean Axial type Caps.

Whats unstable ? Frequency drift is normal in old tube radios. Large
frequency drifts are normal the first 30 minutes on turn on due to heat.
If it is not used often drift is caused by moisture infused into caps and
resistors and oxidation layers on tube elements and connectors. Before you
do anything turn that radio on and leave it on for two weeks 24 hrs a day.
You may be surprised how well it may work after that. Moisture migrates
into carbon resistors and especially old waxed paper caps. Paper caps
are very stable when dried out.

Also power supply electolitic caps become very leaky and need to be reformed.
Reforming means it needs to be charged up slowly and left charged for few
weeks so the electrolite barrier is reformed. If it doesn't excessive ripple
will be noticed. (HUM in audio) Electrolitics Caps in the power supply
should be replaced. This normally is evident by a constant 120 Hz hum in the
audio.

Frequency drift is most often caused by VFO and Local oscillator changing
frequency with variation in heat and applied voltage to the oscillators.
Capacitors used inside the vfo around the local oscillator circuit are very
special and should only be replaced with exact replacement types because of
their temperature coefiecents being applied specific to the design for
frequency / temperature stability.

Warning - Choosing capacitors for replacement require some technical know how
inside an rf reciever.

Capacitors rated with the same voltage and same capacitance are not all equal.

Capacitors in RF circuits are special rated capactors (RF CAPS) as apposed to
general run of the mill caps. Capacitors are rated based on the frequency
range they are expected to be used in. For example two caps may be rated for
.01 uF . General run of the mill caps are tested at 1Khz. But RF caps are
tested at much higher frequencies. The internal construction of off the
shelf capacitors are not designed for rf circuits. Capacitance values for rf
circiuts must be pro-rated based on it's internal inductance which

significantly lowers it actual capacitance at Rf frequencies. So two caps may be rated at .01uf but one (Off the shelf) will be a totally different value at HF frequencies.

All the capacitors in rf ciruits must be chosen very carefully. If you change the type of capacitor being used in an rf circuit it will probably no longer function properly.

The safe places where you can change caps is in the 455Khz Intermediate frequency Amplifier,Audio Amp, Last Mixer, and the electrolitcs in the Supply.

DO NOT REPLACES CAPS IN TUNER,LOCAL OSCILLATOR, RF MIXER, ANY CIRCIUTS WHERE RF IS PRESENT. except for exact replacements.

The capacitive values you mention are not not likely affect stability or tuning in rf circuits because they are of a higher value than what would be expected. Changing them will have little affect on frequency stability. Capacitors in these value ranges will effect IF tuning, noise reduction, Resistor Bypass caps failure reduces ac gain, Decoupling caps effect bias (distortion) & (Stage gain),
Grid-Plate caps Prevent oscillations of amp stages and thermal bias stability . Failure of these caps will cause receiver gain(ac/dc stage gain) Dc shorts and a leakages effecting tube bias,noise,static tuning,thermal runaway (failure after warmup) , Audable oscillations, (unaudable oscillations - stage failure - shorting supply) etc.

I have read hobby magazines that promote the idea of people (amatuers) rebuilding their old receivers. I strongly advise against it unless you are an electronic tech or eng. with 3-5 yrs rf circuit experience. There are people who die every year putting their fingers where they don't belong. There are too many pit falls. Even very experienced people run in to troubles that can take a couple of weeks to solve requiring specialized test equipment. Sometimes there were errors in the original build which have accidental assembly errors or design errors corrected in later serial numbers.

You must first define the kind of stability problems your having.

FREQUENCY - long term / short term / spurious oscillation etc

temperature related - amplitude related

AGC stability - Oscillating agc / no agc - causing if bandwidth detuning and saturation

Oh well good luck.

Drake TR-4 with RV-3 remote VFO, power supply, speaker. This rig is in very good condition. Some minor scratches on the case.

Price is $300.00, negotiable.

E-Mail replies to KLZEng@aol.com

# 4339. Packard Bell pre amps FS

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-03-21 00:00:00 UTC
From: b nock <106312.1035@CompuServe.COM>
Message-ID: <uoJPoRMV9GA.270@nih2naab.prod2.compuserve.com>
Source record: 108134
Cross-posted to: rec.radio.amateur.boatanchors,uk.radio.amateur,alt.ham-radio.marketplace

I have several Packard Bell Pre-Amplifier's Model K available.

These 2 valve mic amps are ideal for boosting the audio on many old military sets. They run off 24/28 volt, thats heaters and valve ht !!, and give about 12v af o/p when driven with a moving coil mic.

They have had a relay removed but otherwise complete, with circuit details inside the case, new valves, a snip at 15 Pound, posted. (UK, overseas extra)

Ben G4BXD.

I have some high-voltage parts suitable for a high-powered tuner and other applications.

(1) Dual-ganged 300Pf Johnson Varicap w/ 7KV separation.
(1) Unmarked (thing it's Johnson) single section varicap w/ 5kv separation. My guess about 150 Pf.
(1) 60 turn roller inductor #10 @ 7.5 per inch on a 3.5 inch form.

If you're interested, let's talk.

Thanks
Dan

# 4346. Empty Tube Boxes

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-03-21 00:00:00 UTC
From: al.dolgosh@hamradio.org
Message-ID: <8EBA35C.0027000E56.uuout@hamradio.org>
Source record: 108141

I fondly remember way back when you could buy generic empty boxes for 7 pin, 9 pin and larger tubes. This was a neat way to keep track of your used tubes. (Yes, I did have a stock of good used tubes!)

Is such a thing still available? Any info or suggestion would be appreciated. I need to test and segregate all the old used tubes I have been squirreling away in storage boxes.

Thanks,

Al - K8EUR

These are ORIGINAL, they are NOT used. I do not like the wordmint as it implies STILL wrapped in original packaging without touch by human hands. These MAY have a VERY LITTLE rubbing around the edges as they are paperback and have been on the bookshelf and have been moved from shelf to shelf on the odd occasion.

Date: 1998-03-22 00:00:00 UTC
From: k2ok@ntr.net
Message-ID: <6f3vc4$mn0$1@camel29.mindspring.com>
Source record: 107969
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.swap

This is a very special Heathkit HW-101. It is in excellent physical condition, but what makes it special is it's electrical condition. It was completely refurbished by "one of the Hams at Heathkit" (WA1LJY/8)in June of 1997. He went thru the rig and installed all the latest Heath mods, fixed a few wiring errors, replaced the "Phono" Antenna connector with a SO-239, re-capped the Power supply, and performed a complete alignment to bring it up to original specs. Receiver sensitivity is 0.2 uV for 10 db. 50 uV = S-9. Transmitter power output is 100 watts. It comes with the 400 Hz. CW Filter, the HP-23-A Power supply (also refurbished) and original manual for the HW-101 . Sorry but I do not have a manual for the power supply. There are lots of $150.00 HW-101's out there but you won't find one like this for anywhere near those prices. This rig is for serious lovers of the "Hot Water 101".

Check it out on eBay at:

>http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=9013751

# 4375. Need help identifing Collins Mechanical Filter

Newsgroup: rec.radio.amateur.boatanchors

I have a large Collins Mechanical filter that I would like to identify.
It is a bandpass filter with a center frequency of 64 kHz. The label
markings are:

F 64 Z 5 (64 kHz, Type, Bandwidth?)
6841 (Date code?)
526 9350 00 (Part Number ?)

It is 6 inches long and 1 inch in diameter. I have put a
scan of it on my web page.

http://www.3dnet.com/mike/collinsfilter.htm

If anyone knows what it is from, what it might be good for, and/or is
interested in it, please e-mail me. Thanks,

Mike Nowlen WB4UKB

> which has been updated and revised today.

Hi Robert,

While I understand the fun involved in experimenting with modifications such as this one, I am left wondering if they really make for a better radio, or if the overall performance is degraded. Is there any advantage to the increased gain provided by the new converter and IF tubes, other than in extreme weak signal reception? One of my red flags in AM radios is the potential for overload of the last IF stage on strong stations, when there is a lot of AGC Voltage applied to it. The final IF stage in an AM radio should be ideally operated with no AGC, to provide the power necessary to drive the diode detector, and avoid overload under strong signal conditions. Increasing the gain of the radio, especially by using a high transconductance semi-remote cutoff tube in the IF, without changes in the AGC circuits seems like it is inviting overload problems of this sort. One of the several advantages of adding an extra stage to increase the gain, is it provides another AGC controlled stage, that can reduce or eliminate the need to apply AGC to the final IF amplifier. I would think that a more fruitful course of modification for an AA5 might be to add a more sophisticated AGC circuit. Adding some delay to the AGC circuit would make more gain available for weak and medium level signals, although it probably wouldn't help the strong signal overload problem any. Of course, my priorities in a radio are excellent audio qualities, and the best signal to noise & interference ratio on medium and strong signals, if someone is into weak signal DXing, the increased gain provided by these modifications may be an advantage.

Regards,

John Byrns

I've heard that a slight heating the slug with a solder iron will
often break them loose. One variation said to get a copper wire just
big enough to fit in the hex hole and heat it with the iron so that
heat is more evenly distributed down the length of the slug.
Good luck!

Very interesting! These knobs are part of a group of "tactile identification" knobs the (at least ) USAF used on airborne systems, to include RADAR, Fire Control, AFCS, etc. They allow the pilot crew-member to tactilly identify a knob in lo/no light conditions and/or without seeing them. We had to be able to a. identify the "proper" control box in the AC buy known location, then b. identify the correct control function (read: knob) by feel. I also recall seeing the suite on the AFCS, MAD, and some other stuff on a P-3, too. Sooo, they aren't organic to any particular piece of equipment. Does that help? de K3HVG

Hi all,

I have for a friend the following radios:

You may email me or call him at (304) 855-4678.

Ten-Tec Omni A HF rig with matching external VFO, Vintage hand mic :) and operators manual for each item. Radio is solid state with analog dial (NO TUBES!!) Sent to Factory in 1990 for a checkup and tune-up (have documentation on that) Radio was purchased new in 1979 and has worked like a champ. 160-10 meters, 3 cw filters, ssb filter, full break-in QSK. VFO allows rx of 2 freqs. simultaneously, tx/rx from radio or vfo or vice/versa. Also in vfo are 4 crystal slots for fixed channels. runs 100 watts on 12vdc using 16amps for full output! Radio is a 9 out of 10..
PRICE IS $400 SHIPPING INCLUDED.
Will trade for the following:
Prefer solid state radio!!
Yaesu 757GX
Kenwood TS820/TS830/TS530, or similar. (looking for something with DIGITAL DISPLAY, IF SHIFT and NOISE BLANKER) with vfo or speaker or whatever... let me know what u have (excellent condition, please!!)
thanks,
Randy

> stage's tube's plate.

The problem is that when the last IF stage is controlled by the AGC Voltage, it will be biased to a very low plate current value when a strong signal is being received. If the radio isn't designed just right, the plate current at high values of AGC Voltage will not be adequate to provide a distortion free signal at the plate, which drives the diode detector. The higher gain of the new IF tube could upset this delicate balance that the original designers intended. This problem with AGC in the last IF stage is covered in most of the old radio engineering handbooks.

Regards,

John Byrns

I have (not for Sale) a SX-100 MKII in excellent condition with a pristine manual.
This radio has original Hallicrafter tubes and is clean inside and out. The factory seal is still on the bottom rivited on. I bought it for $175.00 what is it worth?
When I put this up against my WJ1000 (Both units are connected to RF Systems DX-One Pro) (two isolated inputs to prevent interaction) They hear the same in the dirt signals with low noise. I almost believe the SX-100 is clearer. I am not posting this to stir debate. Just want to know what kind of find I stumbled across
17,675 Radio New Zealand Int'l was the choice at 2200GMT 3/19/98

# 4403. Brampton, Ont. Hamfest Report...Bugs, Bugs, Bugs!!!

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-03-22 00:00:00 UTC
From: radiorob@serix.com
Message-ID: <35146013.18897056@nntp2.uunet.ca>
Source record: 108070

Hello Ba'ers:

Well today was a day that started off real messy....but ended up being real productive. At 4:30 AM I headed off for the Brampton, Ontario (Peel) Hamfest with my pals Tony VA3CQ and John VE3JN. Before headin' to bed the night before...a steady flow of Freezing rain had begun...and the weather man was calling for more of the same....lots of Snow..and high winds. He was right!! When we left it was doing all of the above at the same time!! After a real slippery ride and 120 miles of Rough Sleddin'..we arrived. Lots of Cars in the ditch...and one poor fellow did a 360 right in front of us on Highway 401.....a major hiway heading into Toronto. In true Hamfest Fashion...we didn't let a Major Canadian Snow/Ice Storm stop us!!!

The Brampton Hamfest is rather small.....but I always seem to cull a few nice Boantanchors and Accessories out of it.

Today was like Christmas! I missed the Collins KWM-2A/ 312B-5/312B-3/ Collins Mic package deal....but the same guy who had this gear also had a "Bug Collection"...and I'm not talking Butterflies Here folks. As part of an estate they had brought the Collins Gear...some neat old Radio Parts, and 3 "Bugs"....all of which followed me home.

The first was a Chrome Plated Vibroplex Original Deluxe in Excellent Like New Condition. This is the one with the red keyer knobs. It was housed in what I believe to be a "Non Original" Wooden Box....lined with Red Felt. I have never seen a Wooden Vibroplex Box from the Factory......Does anyone know if this could be a Vibroplex box??? I don't think it is.

The second Bug is a real beauty.....a McElroy 1938A Deluxe Model in "Marbelite". This bug cleaned up real nice and looks great. It has a low serial # of 543. I already had one of these keys in the Plain Black Wrinkle finish..so it was nice to get the "Marbelite" Version, which also includes a Circuit Closer.

The 3rd Bug is a Vibroplex Model "X" Early Version from about 1911-1913 ..Serial # 11152. This Bug is in VG Condition...and appears to only be missing the Finger paddles.
I need a little help with this bug..if anyone can help. My Vibroplex book states that this version came with either a "Black Japaned" Base...or the Optional "Nickel Plated" Base. This one however has a "Grey Painted Base" with Gold Lines and accents painted around the Outer border and in the corners. This is similar to the Gold painting on the Black Japaned Version...but this one is Grey. Does anyone know if there was a "Factory" Grey version of this Bug....or has this one

been repainted by someone?? The underside of this one is black by the way.

The Bug Collection now stands at 10 Pieces.....and don't let anyone try to tell you that you can't catch bugs in a Snowstorm!!

73..ROB.

I have a Hammarlund HQ-170A ham band receiver for sale. Unit is in very nice physical condition (a 9 out of 10). Does not have a clock. The main tuning knob and 2 small selector knobs are not original but they do not look too bad as far as matching the rest of the knobs. Unit works well and has a manual. Cabinet is in very nice shape. Same goes for the front panel. Chassis is clean. Asking $200.00 pick up only or can deliver or meet within 100 miles of me (near Allentown, PA). Please e-mail if interested. Thanks.

Message-ID: <35167411.1159026@news.fast.net>
Source record: 108074

I have an RME 4300 ham band receiver for sale. Cosmetics are good. I'd rate it a 7.5 out of 10 and it should clean up even nicer. The main tuning knob does not look original, but the knob used looks reasonably close. Manual included. Radio works in CW and AM modes, but the audio drops down to near nothing in the SSB modes (the "S" meter deflects normally though). I was using it in the CW mode to copy SSB and that seemed to work OK. Asking $100.00 picked up or can meet within 100 miles for delivery (I'm near Allentown, PA). Add about $25.00 for UPS shipping if you need it shipped. Please e-mail if interested. Thanks.

Subject: ** FLEA at MIT ** Sunday April 19th Cambridge MA
Summary: Buy Sell SWAP Ham Radio Electronics Computers 9AM - 2PM

It's snowing today so while it sure doesn't feel it..
Officially.. Spring has sprung and that means
the season's first MIT Flea is only a month away...

*** !!!! In our Traditional GARAGE and lot !!!! ****
so come rain or shine or super heat the Flea is on !!!

********* $1 buyers discount with hardcopy of this notice ********

COMPUTERS - ELECTRONICS - HAM RADIO - COMPUTERS - ELECTRONICS - HAM RADIO

FLEA all SUMMER at MIT
Sunday April 19th, 1997
9AM-2PM

Come to the city for a great flea - plenty of free parking.

MIT's electronics and ham radio flea will take
place on the third Sunday of each month this summer,
April thru October.

There is tailgate space for over 600 sellers and
free, off-street parking for >1000 cars!

Buyers admission is $4 (you get $1 off if
you're lucky enough to have a copy of our ad)
and sellers spaces are $10.00-each at the gate.

The flea will be held at the corner of Albany and
Main streets in Cambridge; right in the Kendall
Square area from 9AM to 2PM, with sellers set-up
time starting at 7AM.

Sellers Season Passes are again available until
April 19th for only $50 per space for all 7 meets !!

*** Attention Sellers ***
Prepaid vendors.. Season Pass or monthly,
will be admitted FIRST.
Separate lines will form prior to gate opening
for prepaid and nonprepaid vendors

!! RAIN or SHINE !! Have no fear of rain, a covered
well illuminated tailgate area is available for all
sellers (6'8" clearance).

Talk-in: 146.52 and W1XM/R-449.725/444.725 (PL 114.8/2A).

Sponsors: MIT Electronics Research Society
MIT UHF Repeater Association (W1XM)
MIT Radio Society (W1MX)
Harvard Wireless Club (W1AF)

# 4410. Re: SX100 MKII

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-03-22 00:00:00 UTC
From: Ben Wallace <bwallace@sd.cts.com>
Message-ID: <01bd554c$eb5789a0$3506a3cd@bwallace.cts.com>
Source record: 108077

That is a very nice shortwave radio. Compact and very solid. I have seen these receivers, in similar condition as yours, recently going anywhere from $150 to $250. You got a fair deal. I picked up an SX-100 MKII in same condx as yours last December and paid similar price. Mine also has the original Hallicrafters tubes. Here's something very interesting....I have the original sales receipt showing when my SX-100 was sold. Sold on June 15, 1957 for $295, R-46B speaker $17.95.

Hope this helps out.

Ben

Hi, all!!
If you have any AN/ARC-5, SCR-274-N stuff laying around the shack...I want to buy it! Xmtr's, rcvr's, control boxes, cables, wiring, dynamotors, racks...anything! If you have any old dead ARC-5 chassis laying around, I'll take those, too!
Just e-mail me (reply or address below) with what you have and I'll make you an offer. Naturally, I'll pay shipping. Clean out that shack and make some money.

Hello Alan,

You might try the Vibroplex company:
http://www.vibroplex.com

or The Vibroplex Collector's Page:
http://www.la.ca.us/frandy/

or The Telegraph Office:
http://fohnix.metronet.com/~nmcewen/tel_off.html

for more info

I think the J-36 is just a Vibroplex Lightning Bug in miliary dress. They were made by a number of companies (under license from Vibroplex), including Lionel (the model train folks)

I'm not a collector but a user of Vibroplex "bugs". I've never seen or heard of an actual manual for servicing them - but the military usually does have a TM- for everything.

Good luck & enjoy it.

>That's the clue- the underside. While not a real bug collector, I've
>never seen one with gold trim and anything other than the black
>japanned base, likely it's been repainted.

While the gold trim on the earlier pre 1930's vibroplxs is often gone bugs with the trim are not rare or scarce. Many times the trim is worn in many places and collectors will refer to a certain amount of the trim being present to describe general condition.

What is scarce, however, are the decals which were applied by Vibroplex - the Bug logo or ALBRIGHT CO. decals. You can often see where the decals were but not many whole decals remain. Also of signifcant interest to collectors are the bugs which look likr Vibro's but were illegal clones. These can be found at times with the Vibroplex License decal - sold to the owner of an "illegal" bug to keep it and the user legal - Vibroplx threatened legal action action the user of such keys and closed down several makers before their patent expired.

Decals and trim add significantly to value (if orig).

Source record: 107999

I have a SR-46 that I acquired in a trade a while back. Surprisingly, it's in exceptional condition, no scratches, dents, anything. Have the manual, mike, and crystals. At resonance, she does a high 5 watts. I'm not using it, am in the process of dismantling my station, and am wondering what this might be worth in cash or like swap value. I'm more into serious monitoring, am chasing a AOR 3000A or Icom R7000 (Or both!!) once my slush fund grows...Any ideas??

Haven't noticed any degradradion or distortion on strong stations on the
"hot rodded AA5" radio. This radio only has one IF stage anyway.
Not sure why or how the detector stage would be effected by the use
of AVC on the IF stage input. The detector would only "see" the
stage's tube's plate.

Try contacting some of the major crystals manufacturers. They can probably help
you as they once sold a lot of these and may remember.

Try JAN Crystals in particular.

You can get all the addresses & phone numbers from:

http://www.mnsinc.com/bry/mega/xtals.htm

All the best - AF4K

I have the following Radio, and electronic equipment for sale. Reasonable offers or trades for radio and Pentium computer EQ. will be considered. All working last time tested unless noted. Shipping is extra.
Thanks

• Tempo-1- Tube type Ham Transceiver/with Power Supply 80-10 meters. Looks good and works well. 100W output. $200

• Swan Cygnet 270B Transceiver (80-10 Meters). Looks Good and works well. On scale of 1/10 it would be 8-9. This rig has an internal Power supply. $250

• Swan 350 Transceiver (80-10 Meters). Looks Good and works well. On scale of 1/10 it would be 8-9. This rig has an external Power supply. $250

• Motorola VHF Remote All tube Model: PA8270J SER.NO: 8697. There is also a tone Signal and intercom control on front below speaker. This is the type that was used by police and fire dispatchers in the past. Don't know if it works. $50

• Heathkit HW 101, 80-10 meter transceiver. No Power supply. It is receiving, but not transmitting. Not able to test. Looks are 7/10. As is $80.

• Hallicrafters Model S-108 SW Receiver with a calb. Ham band spread. Looks good works well.$75

• MFJ Rtty/CW Computer Interface Model MFJ-1224, used for copying code from the radio to your computer. $50

• Pearce Simpson, Guardian 23- All tube CB Transceiver/with mobil power cord and mounting bracket. Looks and works Good. $100

• Traynor, Group Two B- Audio Amp Head. High/ Low mic. in puts. Master volume, volume, bass, treble and tone shaper controls. $125

• Channel Master- Tube Stereo Receiver (Model 6612) and matching amp (Model 6601) Looks good and plays on FM. AM not working. $150 for both.

• Sams CB Photofact- Several volumes, some continuos: numbers as follow: Continuos 57- 65. Individual 70,72,80,88,93,98,104,120,122,128 178,190,226.Will sell all or 10 for $3.50 each+ shipping. Single volumes are $8 plus shipping.

• AR Inc.- Stereo Amp, all solid state. $100

I beleive that the HR-2A use 12 Mcs crystals and the HR-2B uses 8 Mcs
crystals. The receiver uses the same crystals.

# 4464. Cleaning a boatanchor?

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-03-23 00:00:00 UTC
From: martyt@pobox.com
Message-ID: <35168e4a.12616822@news.supernews.net>
Source record: 108024

Just bought an SB-200 - my first boatanchor and first linear. It's in good shape overall but is quite dirty inside and out. I cleaned the case with a strong TSP solution and it looks great; used a toothbrush and some 409 to clean the front panel.

But there's a lot of gunk (dust, cigarette tar, etc.) in, on and around the chassis - stuff on the various components that won't come off with a simple rub - the transformer is caked with stuff, as are most of the resistors/capacitors/slugs, etc

What can I use to safely take that stuff off? I'd like to clean it up as much as possible before I start using it.

Thanks,

-Marty KI0LO

Actually it can happen. There was a department store in my town which closed down about 5 years ago. They had been operating since the 1920s and had a separate warhousing operation. When the store was closed and everything remaining was auctioned, there were radio's and televisions "new in box" unopened from the 50s which had apparently been is a sub basement
and forgotten or overlooked or carried as ongoing inventory. I had also heard but could not confirm that there were some Hallicrafters SX 99s from the same time period in the warehouse. I do know that their newspaper advertising at the time mentioned a selection of shortwave radios.

I also ran across a story a few years ago of someone bidding on some DOD surplus was surprised to find WW2 command sets still in their original containers. I think there was mention of 40s and fifties Nationial receivers being found in old department store warehouses in Chicago a few years back. Nothing surprises me.

Message-ID: <3516a11b.2319633@news.sol.no>
Source record: 108028
Cross-posted to: rec.radio.shortwave,rec.radio.amateur.boatanchors

I don't know why I did it, the house is already filled up so one person have too little space, but I used those dreadful large empty boxes in the army, and 'everybody' talks about them....
Do you have any technical notes for Siemens 745E communication receiver? I bought it at an auction in Oslo on saturday. I need some info, and the dial friction gear does not function properly, and all buttons have been replaced.
I do not need circuit diagrams, LA8AF promissed to send me some copies, but any information is valuable, if you have some files informing about the valves.
A fellow mentioned that some input circuits could be removed to improve the sensitivity.
The receiver covers: 14-21kHz, 88-175kHz,
170kHz-....30MHz - in 12 ranges alltogether.
Hpe cul.

# 4471. FS: Sony Reel to Reel Full-Size AC/DC Deck #TC-560

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-03-23 00:00:00 UTC
From: l.mclaughlin@popmail.csuohio.edu
Message-ID: <6f6g7l$afn$1@csu-b.csuohio.edu>
Source record: 108031

SONY TC-560 E.S.P. Auto Reverse Reel to Reel Stereo Deck

Unusual Feature--A Full Sized/Featured Deck That Can Be Run Off of
12 Volts D.C. For Auto Use With Adapter (Not Included)

3 speeds 7.25 Inch Reels

Dual Play Selector Forward or Backward in addition to stop, fast
forward and fast reverse

- Noise Suppressor Switch
- Speakers on/off

Control Knobs For:

- Mode
- Base
- Treble
- Left/Right Volume

Selector Buttons For:
- Tape
- Aux
- Tuner
- Phono

Record Controls:

- Dual Level Meters
- Record buttons
- Mic/Aux L/R knobs (two)
- L/R Tuner knob (one)
- L/R Phono knob (one)

Auto Reverse On/Off

Unit from what I can see needs some minor repair/TLC. I do not
service them. It plays fine, however the following needs to be
addressed.

1. The tape digital counter is not working (probably needs new
belt that connects the mechanical digital counter to the
motor/reel mechanism).
2. When the unit is put in reverse the motor is heard, but
nothing happens. This again is probably an adjustment or need
of a belt.
3. One fascia philips type screw is missing from the deck's
cover.

4. The dust cover or case cover if you want to term it that is of the unit is missing.

Asking $75 or best offer, plus shipping (No C.O.D.'s)

Wish consider a tube tester in trade like a Hickok (e.g. model 800, 880A, 752, 752A, 539B etc.) or military style tube tester.

International buyer welcome.

hello ,

I might be immigrating to Canada, and , am wondering as
to what PAPERS do I need to move my loved R390a with me
to canada.

It seems that I have lost its papers.

I am a SWL, and dont have a HAM ticket either.

Any pointers are greatly appreciated.

Please post to the NG, as I have held my email address (SORRY)

# 4476. FS/T >> Heathkit HW-12 Transceiver, bridge, switch <<

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-03-23 00:00:00 UTC
From: "Jeffrey L. Bauman" <wb5kzw@hotmail.com>
Message-ID: <6f6p8k$115@bgtnsc03.worldnet.att.net>
Source record: 108036

Heathkit HW-12 Transceiver. Single band, 75 meter SSB rig.

Visual inspection showed L4 missing, and two or three other components
are placed in the pcb but unsoldered. I suspect a prior owner was in the
process of repairing the rig. I don't have L4, and I don't have any
interest
in spending the time to fix this thing, so here goes:

I will sell the transceiver with HW-12A (note suffix) manual as-is
for $55 shipped from Detroit area (it's pretty light). Or, part it out
as follows:

Front panel $10
Enclosure $10
Set of Knobs $10
Set of Tubes $10
Manual $10
PCB w/ components $10
Meter $10

Add $3.00 shipping for each.

My preference is to sell it as a single unit.

Cosmetically, it all pretty nice - not mint, maybe an 8 or 9. No
extra holes, no mods that I can tell.

Also,

HEATHKIT HD-15 SWR BRIDGE
---
Works, but plastic meter cover missing.
Other than that, cosmetically ok. $10.00

HEATHKIT S-3 ELECTRONIC SWITCH
---
Excellent condition. Includes original
manual. $10.

My sincere thanks to all who responded to my questions regarding the Hallicrafters SX-43 which I am restoring. After I get a couple of tubes I will attempt the alignment. Good News: The rig is hyper-stable...Left it on 10MHz WWV for six hours last Saturday and it stayed there. Any other advice gladly accepted... TNX es 73,

Mike, KE9EX

I'm not sure what you mean. Never having emigrated to Canada (I've been here all along) I don't know the details but I thought you were able to bring your posessions with you without a problem.

If you were coming to visit, and wanted to prove that you hadn't bought the receiver in Canada when you returned home, you would want to register it with your own country's customs service, so they now that you had it before leaving the country. But that wouldn't apply if you were moving to Canada.

There's no law that says you can't have an R390A, whether you are a ham or shortwave listener or whatever, so I'm not sure what the perceived problem is. The only thing I can think of is that you're worried that at the border they would think it's stolen, but I don't think that's something they worry about and surely not with an old boatanchor.

I have the following catalogs, data books, and
reference material available.

COLOR TV SERVICING - Walter Buchsbaum
1968, Hardcover 280 pages, excellent condition with dust cover
$5.00

HOW TO REPAIR ELECTRICAL APPLIANCES - Gershon Wheeler
1972, Hardcover 220 pages, very good condition with dust cover
$5.00

CNE STUDY GUIDE Volume 1 - NetWare Operating Systems
Wave Technologies Inc, 3rd Ed 1994. Softcover 358 pages
inked name of cover, very good condition
$15 [see note below]

CNE STUDY GUIDE Volume 2 - Core and Electives
Wave Technologies Inc, 3rd Ed 1994. Softcover 380 pages
inked name of cover, very good condition
$15 [Note: these two manuals were the study material for the
Novell, Inc. CNE exam in 1994. They are great for the
basics, etc., but do not cover NETWARE Version 4.0 option]

TM 11-354 TELEGRAPH PRINTERS & TYPEWRITERS EE-97, 98, 102
War Department, August 1947, Very Good Condition
$5.00

TM 11-2139-35 Field & Depot Maintenance TELEPHONE TERMINAL AN/TCC-7
Depts. Army and Air Force, Nov 1958, Very Good Condition
$5.00

NavShips 91756 Radio Frequency Oscillator O-165/UR
Northern Radio, Sept 1952
Good Condition, ink call stamped on cover
$5.00

TM 11-669 TRANSIENTS AND WAVEFORMS
Dept. Army, Nov 1951
Very Good Condition, ink call stamped on cover
$5.00

Service & Cal Manual - Dumont Labs scope models 304 and 304H
not dated, but old - I'd say 1950s
$5.00

NAVSHIPS 92810 Tech Manual for PULSE GENERATOR O-404/SP
Nav Ships, July 1956, with several changes, excellent condition

$5.00

NAVSHIPS 92197-1 Suppementary IB MULTIMETER AN/USM-34
Nav Ships, Jan 1956, ink stamped call on cover, vg condition
$5.00

OSCILLOSCOPE model 132 - Sylvania
Not dated, but old - 1950s
$5.00

MICROVOLTMETER & AMPLIFIER model 202B
Kintel, 1956, good condition
$5.00

...Go to Sam's Club and get some ENTNT multi-purpose cleaner/degreaser.
This stuff is GREAT! Mix it about half and half water. Apply it with a
1 to 2" paint brush. After soaking for about 15 minutes, flush with
clean water. Your SB-200 will look like new! Don't use it on panels
with white lettering though. ...Joe

# 4484. Amplifers, what works on AM well?

Newsgroup: rec.radio.amateur.boatanchors

From: Radiodan <radio@bigfoot.com>
Message-ID: <6f7g6p$e47@suriname.earthlink.net>
Source record: 108044

In response to many requests from fellow BAers and AMers (3870 Wed night).

The Henry 8K is the best choice for truly loafing at a KW of AM carrier
output (or more).
The power supply is conservatively rated for 4KW+ output all day long!
It uses a 3CX3000A7 Eimac.

As you may know, when fully modulated to 100% the power requirements are 4
times the RF carrier power output.
This is why the other amps with cheap parts and limited designs fry when we
use them on AM for more than 30 seconds!
See specs at http://radiodan.com/Henry/henry_spec_list.htm

Anybody interested in an old Knight Kit VFO from the late '50 might check my eBay ad at:

http://iguana.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=9021784

"Knight Kit VFO from late 50s appears to be in working condition -- all the tubes light and no smoke. Oscillator can be heard in a receiver. No major dings or scratches, front panel has small marks normal to age of unit, crackle finish case in very good shape....." Picture included with ad.

This is a one owner device from my early days in Ham radio and was only used a few times in the novice bands before I got my general.....

Give your signal a little character, remove the voltage regulator!

I bought two of these receivers. They are NIB. I had the great pleasure
of opening one of them last December. It is really something to open up
and get a really fantastic, brand new, receiver -- let alone an HRO-500.

Wonder what a NIB Collins 75S-3C would go for?

Ben

Dr OM, you paid a very reasonable price for this receiver if it is truly in great condition. I 've had one for the past 5 years that I restored myself. It is a wonderful receiver, perhaps not quite stable enough by todays standards, but sounds beautiful on AM, SSB or CW. Particularly, if you have the R-46B speaker. I have seen these speakers sell for between $50-75, depending upon condition. If you got the speaker with your radio, then it was a very very good price.

Enjoy,
Dave, K2DP, St.Louis

At the risk of getting into a topic which is probably better left alone
... since the legal limit for AM (or any mode you choose) is 1500 watts
PEP OUTPUT (or about 375 watts carrier depending on how you care to
argue the fine points), why would one need a Henry 8K?? And why are we
talking about a KW of carrier power output?

Am I to believe there is less that separates ham-kind from the lower
beasts (or perhaps CBer's with a leeeeenyer) that I thought?

Hello everyone,

Thanks for all your replies.

I had the privilege of being born in a STINKING country like INDIA.
In a lot of countries in that area of the world,
it is not allowed to sell a SW radio with full coverage 500KHZ to 30
MHZ.

If I were to land in INDIA with a 95 LB BA like collins R390a, I
am sure that I would be JAILED for the rest of my life over there.

Yes, I did manage to sneak in a SONY 7600G radio on my last
visit to INDIA though. Very nice listening conditions for SW
over there though. Very low noise levels.
How many of you every QSO/QSL INDIA( VU...) ever ?

SO, I recently did buy a R390a in US, and would like to take it
witm me to canada. I gather, that I should not have any problems doing
that.

Thanks agaon everyone !

Source record: 107922

Thanks for reading. I have for sale an RME70/DB20, which is an RME70 and the DB20 preselector in the same cabinet. The unit looks very good, except the DB20 is missing the two 8" chrome strips and one of the knobs is not original. I have not tested this unit for functionality, however the 70 does light up. I haven't powered up the DB20. I have a copy of the manual for it. I have no idea what this unit is worth but I hear it is rare. I will entertain offers for this unit, sold as is plus the shipping.
I also have an RME69 and a DB20 for parts, no knobs or cabinet, some missing tubes. Excellent spare parts units for the 70/20 combo, so whoever buys the 70/20 has first shot at these parts units. Make me an offer, sold as is plus shipping.
If you were to see the 70/20 combo, you would probably buy it, it's a nice looking unit. Email me direct if you have any questions.
I am located in west central Missouri. John N0EE
BTW, the 70/20 combo has the black wrinkle finish paint, not gray.

Unfortunately, there are a lot of CB'ers with ham licenses who bring their "do whatever you can get away with" attitude to ham radio. These are the folks who laugh at those of us stupid enough to abide by the rules. It's funny, though. I feel sorry for them, not myself.

Grant, your points are noted.
As it was so well pointed out to me by Stan, "It's kind of like owning a sports car and the speed limit is still only 65 MPH". Should we all own Ford Escorts?
That's ONE way to think of it.
Another way is: Loafing along certainly can't be discounted when you're talking about AM (or any continuos mode). Get into that long winded QSO on 75M and don't worry about your equipment.

Enjoy!

I totally agree with Heinz... I was lucky enough to get a used unit
from someone who had just gotten a new one... mine is a 9.4 or so,
works great, and is indeed one of the most handsome rcvrs ever made.
No, it isn't my RACAL 6790/GM... but little else is... and mine works
like a million $$$. It's all a matter of taste I guess.

Due to overabundance of projects I am selling the following items:

Kenwood R-2000. This BC-30MHz shortwave receiver is in excellent condition. Comes with manual. $300 plus shipping.

Bearcat BC760XLT, pre-ban model. This scanner radio is in excellent condition. Comes with antenna, charger, and copy of manual. $125 plus shipping.

* Hallicrafters SX-104. This 30-50MHz boatanchor receiver is in excellent cosmetic condition and good working condition. $75 plus shipping.

* Hallicrafters SX-105. This 152-173 MHz boatanchor receiver is also in excellent cosmetic condition and good working condition. $75 plus shipping.

* Special deal - take the pair for $125 plus shipping. (Sale pending)

Realistic DX-75. This GC boatanchor receiver is in very good-excellent cosmetic condition and good working condition. Includes an original (NOT a reproduction) instruction book. This is when Radio Shack was still Radio Shack, and not a Tandy division. $50 plus shipping. (Sale pending)

DenTron MT-2000A Antenna Tuner. 3kW PEP antenna tuner. This unit is in good cosmetic and working condition. $125 plus shipping.

Cobra 148GTL-DX CB transceiver. Excellent condition, including all original documentation and box. $250 plus shipping.

Marko 10-40M mobile linear. 75W, AM/SSB. Condition unknown. Take a chance? $25 plus shipping.

I need to get out of the radio business, so I would prefer outright sale to trades. Delivery possible in north Texas, eastern Oklahoma, or northwest Arkansas. If interested, or for more information, email me at twhite@cyberramp.net. Thank you.

Date: 1998-03-24 00:00:00 UTC
From: Frank Krozel <frank@electronicinstrument.com>
Message-ID: <351822C7.6C77226C@electronicinstrument.com>
Source record: 107929
Body handling: Binary attachment payload not displayed: vcard.vcf

I just bought a Swan SS200, which is a 100 watt ( out ) solid state low band, 80-10 rig.
Looking through all the magazines for information, reviews, etc, it appears rare. In fact, I can't find any information on this anywhere!
After alignment ( slight ) it
appears to be a nice rig. I am wondering how many were made, and if any useful
mods are around for this interesting rig. Fran KG9H

[One or more binary attachments are retained only in the source text.]

From: n3ab@fast.net
Message-ID: <351b3549.206637@news.fast.net>
Source record: 107933

I have a Hammarlund HQ-170A ham band receiver for sale. Unit is in very nice physical condition (a 9 out of 10). Does not have a clock. The main tuning knob and 2 small selector knobs are not original but they do not look too bad as far as matching the rest of the knobs. Unit works well and has a manual. Cabinet is in very nice shape. Same goes for the front panel. Chassis is clean. Asking $200.00 pick up only or can deliver or meet within 100 miles of me (near Allentown, PA). Please e-mail if interested. Thanks.

If you would be so kind of you to put "for sale on ebay"at the beginning
of your post. Those of us who are not interested in making purchases
by auction would have the opportunity to skip over your ads. This
would keep us from clicking your post just to find out it is not for
sale on the news group but rather at an auction.

Regards,
Don Ferrill

From: n3ab@fast.net
Message-ID: <35183527.172944@news.fast.net>
Source record: 107935

I have an RME 4300 ham band receiver for sale. Cosmetics are good. I'd rate it a 7.5 out of 10 and it should clean up to be even nicer. The main tuning knob does not look original, but the knob used looks reasonably close. Manual included. Asking $100.00 picked up or can meet within 100 miles for delivery (I'm near Allentown, PA). Add about $25.00 for UPS shipping if you need it shipped. Please e-mail if interested. Thanks.

# 4535. FS: Hallicrafters S-120 (sale fell through)

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-03-24 00:00:00 UTC
From: dave@boatanchors.com
Message-ID: <6f9pgj$5ga$1@nnrp1.dejanews.com>
Source record: 107942
Cross-posted to: rec.radio.swap,rec.radio.amateur.boatanchors

For sale,

Hallicrafters S-120. Very nice physical condition.
Plays on all bands, but could use tuneup. No
mods or damage.

There were several who emailed after it had sold,
so if you still want it it's for sale again. I
lost your email addresses :(

NOTE: The radio weighs 14 pounds boxed. It will cost
about $16 to ship by USPS to the EAST coast!
The previous buyer did not consider how
much it costs to ship heavy things coast to
coast! My zip code is 98466. If you call
1-800-ASK-USPS you can determine how much it
will cost to get it to you.

Price is $40 plus shipping by USPS.

Many thanks to all,

Dave WB7AWK

From: Paul Larson <plarson@xmission.com>
Message-ID: <35187F8E.12B5@xmission.com>
Source record: 107945

Anybody know of a source for "soft wax" (not candle wax) that can be used to secure and eliminate loose-ness in IF tuning slugs of an old radio?

They have been tuned repetedly, and the shallow threads in the plastic tubes have almost worn away.

Thanks,

Paul

This much is true. When I serviced HF gear in the Navy, I was amazed the first time I saw the amps with two 4CX1500B tubes in parallel, driven by two 8122 tubes in parallel, and only putting out 1000 watts to the antenna! However, this combo will loaf at 1000 watts continuous duty! There was a RTTY transmission on my ship that would often keep the transmitter keyed several hours continuously! The four years I spent on-board, I think we only replaced a pair of the 4CX tubes once. (They were always replaced in pairs. These wern't bad, per-say, but "soft") There were 7 similar HF transmitters on the ship.

What a nice amateur-band amplifier a pair of 4CX1500's would make!

-Joe N6DGY

What you need here is plain old "bee's wax"!
Beeswax is harder and melts at a much higher temeperature than
paraffin. You can get small cakes at any Tandy Leather Shop.

WANTED: Collins 51J4 or R-388A

Can pay up to $250 for a unit in good physical & operational condition with standard accessories. Candidly, I realize the prices of these Collins/military models are all over the map, but this is what I can afford to pay. May not find one on the net, but maybe I'll run into one via another source.

Email with details if you have a unit you wish to sell at this price.

Have Hewlett Packard Laser Jet II printer could swap as well. Can provide details on HPLJII if you're interested. This is one of HP's most desirable/dependable printers and least expensive to operate. Supported by Windows 95 as well.

Thanks

# 4559. FS: Ham Gear

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-03-25 00:00:00 UTC
From: oldgear@aol.com
Message-ID: <1998032511485401.GAA06035@ladder03.news.aol.com>
Source record: 107869

I have the following Radio, and electronic equipment for sale. Reasonable offers or trades for radio and Pentium computer EQ. will be considered. All working last time tested unless noted. Shipping is extra.
Thanks

• Tempo-1- Tube type Ham Transceiver/with Power Supply 80-10 meters. Looks good and works well. 100W output. $200

• Swan Cygnet 270B Transceiver (80-10 Meters). Looks Good and works well. On scale of 1/10 it would be 8-9. This rig has an internal Power supply. $250

• Swan 350 Transceiver (80-10 Meters). Looks Good and works well. On scale of 1/10 it would be 8-9. This rig has an external Power supply. $250

• Motorola VHF Remote All tube Model: PA8270J SER.NO: 8697. There is also a tone Signal and intercom control on front below speaker. This is the type that was used by police and fire dispatchers in the past. Don't know if it works. $50

• Heathkit HW 101, 80-10 meter transceiver. No Power supply. It is receiving, but not transmitting. Not able to test. Looks are 7/10. As is $80.

• Hallicrafters Model S-108 SW Receiver with a calb. Ham band spread. Looks good works well.$75

• MFJ Rtty/CW Computer Interface Model MFJ-1224, used for copying code from the radio to your computer. $50

• Pearce Simpson, Guardian 23- All tube CB Transceiver/with mobil power cord and mounting bracket. Looks and works Good. $100

• Traynor, Group Two B- Audio Amp Head. High/ Low mic. in puts. Master volume, volume, bass, treble and tone shaper controls. $125

• Channel Master- Tube Stereo Receiver (Model 6612) and matching amp (Model 6601) Looks good and plays on FM. AM not working. $150 for both.

• Sams CB Photofact- Several volumes, some continuos: numbers as follow: Continuos 57- 65. Individual 70,72,80,88,93,98,104,120,122,128 178,190,226.Will sell all or 10 for $3.50 each+ shipping. Single volumes are $8 plus shipping.

• AR Inc.- Stereo Amp, all solid state. $100

# 4560. Want: Copy of SX100 Manual

FS an S-38B. The outer case is rough and would need repainted. The dials ,
and interior, look very good.
The unit has series filaments and doesn't light up. All componets appear to
be intact.
As is, shipped USA, for $ 45. k4gj@citrus.infi.net

# 4562. FS Globe Chief 90

>
>I suspect this is a power transformer

It's a modulation transformer. The primary goes to the 811 plates and
B+ (apparently this transformer has separate windings for each tube --
in normal use the "B" terminals would be connected to each other
and to B+). The others are secondary windings. You'd use the "C"
(common) and one of the others to go to the transmitter's B+ and to
the plate circuit of the PA tube (through appropriate choke and
bypass cap). You'd choose the secondary tap appropriate
for the PA tube and B+ being used.

> [...] It became
>clear that the common B&B is a center-tap to the P-to-P readings.

Yep.

>Do the 3500, 5000, 7000 relate to the amperage ratings of this xfrmr?

No, they refer to the impedance of the stage to be modulated.

>Transformer #2 Make = UTC (New York), Model = VM-2
>

>A couple of the contacts were connected directly to the respective grids
>of the two 811 tubes.
>
>Is this an interstage transformer of some type?

Yes. It's the driver transformer that couples the speech amplifier
and driver stages to the 811 modulators.

What you've got here is a nice big ol' AM modulator.

Ted Zateslo, W1XO

# 4564. HRO-60 tuning strips FS

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-03-25 00:00:00 UTC

National Radio Company, Inc. HRO-60 tuning strips:

Nice reproductions of the plastic tuning strips used in HRO-60's.
I have masters for all coil sets available.
These are the flat HRO-60 type, but I believe they will also fit
the HRO-50 series.

I have all of the following:

A Combination general coverage & band-spread type.
A Band-spread only for A coil set.

B Combination general coverage & band-spread type.
B Band-spread only for B coil set.

C Combination general coverage & band-spread type.
C Band-spread only for C coil set.

D Combination general coverage & band-spread type.
D Band-spread only for D coil set.

E/F Both E & F scales on same strip.
G/H Both G & H scales on same strip.
J J scale only on strip.

AA 27.5 - 30.0 MC Scale on strip.
AB 25.0 - 35.0 MC Scale on strip.
AC 21.0 - 21.5 MC Scale on strip.
AD 50.0 - 54.0 MC Scale on strip.

$10 each (specify type) 2.00 S+H per order, including 1st class
mail and a padded mailer...

Money back guarantee!
If your not happy for any reason, just send them back.

I also sell some HRO and coil-catacomb National parts.
e-mail or write for current National parts list for sale.

The number of responses I've received for this ad is incredible! 141 so
far and still coming. I asked several of the local "HAMS" what they
suggested I do with this radio and how much it was worth. Their concensus was
"worth nothing", this without looking at it. One said
he'd give me $5.00 for it rather than see it go to the dump but I would
have to deliver it to his house. I'd like to thank all of you for the offers,
I sold it to the guy who responded first he's also local. The
costs of properly crating it up and shipping any distance just isn't worth
it.Thanks again
Gene Warner

I'm glad to see that it found a good home. Personally, I think all the local
hams who said it was worth nothing are a bunch of lame-o's. Sort of like
a guy who knows nothing about cars saying that a 57 Chevy should be
sold for scrap metal.

# 4584. QSL cards from the 1960's

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-03-25 00:00:00 UTC
From: "James P. Smith" <jpsmith@ns.net>
Message-ID: <3519E3D4.5996@ns.net>
Source record: 107894

I invite you to my web page where I've placed several international shortwave broadcasting QSL cards from the 1960's. There is also a page of audio clips from 10-20 years past. I figured: if you like old radios, you might also enjoy the cards and clips :)

http://www.ns.net/~jpsmith/jimweb/shortwave.html

Regards,
Jim

# 4585. Ripoff Conclusion

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-03-25 00:00:00 UTC
From: gpewitt@execpc.com
Message-ID: <6fbujm$f29@newsops.execpc.com>
Source record: 107895
Cross-posted to:
rec.radio.swap,rec.radio.shortwave,rec.radio.amateur.equipment,rec.radio.amateur.boatanchors,rec.antiques.radio+phono

I received the radio today. I also received a letter from Mr. Lessa
stating that he was not going to send the radio and containing a check
for the full amount. I checked out the radio which was rather ugly but
works well enough.
It seemed worth the money so I am keeping it and have returned Mr. Lessa's
check. Of the dozen messages I received with comments on Mr. Lessa
3 were favorable and 9 were not. One was quite funny and I wish I had
permission to reproduce it here. I sent the original check on
Jan 8th and received the radio on March 25th. So, end of story.

From: n3ab@fast.net (JRS)

Subject: FS: RME 4300 Receiver

I have an RME 4300 ham band receiver for sale. Cosmetics are good. I'd rate it a 7.5 out of 10 and it should clean up to be even nicer. The main tuning knob does not look original, but the knob used looks reasonably close. Manual included. Asking $100.00 picked up or can meet within 100 miles for delivery (I'm near Allentown, PA). Add about $25.00 for UPS shipping if you need it shipped. Please e-mail if interested. Thanks.

From: "Radiodan" <radio@bigfoot.com>
Subject: Amplifers, what works on AM well?

In response to many requests from fellow BAers and AMers (3870 Wed night).

The Henry 8K is the best choice for truly loafing at a KW of AM carrier output (or more).
The power supply is conservatively rated for 4KW+ output all day long!
It uses a 3CX3000A7 Eimac.

As you may know, when fully modulated to 100% the power requirements are 4 times the RF carrier power output.
This is why the other amps with cheap parts and limited designs fry when we use them on AM for more than 30 seconds!
See specs at http://radiodan.com/Henry/henry_spec_list.htm

From: Gary W8PU <w8pu@your-net.com>
Subject: Amplifers, what works on AM well?

The AM operators already take enough shit from the channelized CB good ol' boy morons that spend every evening on 75 meters. Why would anyone want to make it worse by running illegally high power on AM?

From: "Radiodan" <radio@bigfoot.com>
Subject: Amplifers, what works on AM well?

Grant, your points are noted.
As it was so well pointed out to me by Stan, "It's kind of like owning a sports car and the speed limit is still only 65 MPH". Should we all own Ford Escorts?
That's ONE way to think of it.
Another way is: Loafing along certainly can't be discounted when you're talking about AM (or any continuos mode). Get into that long winded QSO on 75M and don't worry about your equipment.

Enjoy!

>
>I suspect this is a power transformer

It's a modulation transformer. The primary goes to the 811 plates and
B+ (apparently this transformer has separate windings for each tube --
in normal use the "B" terminals would be connected to each other
and to B+). The others are secondary windings. You'd use the "C"
(common) and one of the others to go to the transmitter's B+ and to
the plate circuit of the PA tube (through appropriate choke and
bypass cap). You'd choose the secondary tap appropriate
for the PA tube and B+ being used.

> [...] It became
>clear that the common B&B is a center-tap to the P-to-P readings.

Yep.

>Do the 3500, 5000, 7000 relate to the amperage ratings of this xfrmr?

No, they refer to the impedance of the stage to be modulated.

>Transformer #2 Make = UTC (New York), Model = VM-2
>
>A couple of the contacts were connected directly to the respective grids
>of the two 811 tubes.
>
>Is this an interstage transformer of some type?

Yes. It's the driver transformer that couples the speech amplifier
and driver stages to the 811 modulators.

What you've got here is a nice big ol' AM modulator.

From: bbird97082@aol.com (BBird97082)
Subject: Motorola FM Handie Talkie / question

I was wondering if anyone might be able to help me with the (3) units I
recently got from my Ham radio club. I am trying to find out what
voltage(s)
and batteries should be used to power my units. If you can help I will
certainly appreciate it.

My units are probably from around 1965 and are 10.5" long x 3" wide x 6"
high.
They are Model H23AAM-1101AH Handie-Talke FM Radiophone(s). They are made
to
be carried around like kind of like a lunchbox w a mic on a coiled cord.
The
top comes off with two latches on the ends. Inside there is a empty spot
for
a

battery about the size of an Eveready Lantern battery (on its side), a
switch
with a ext or int setting and two male plugs, one with two parallel contacts
(one smaller than the other), and the other male plug has four contacts,
(two
like _ _ and the other two perpendicular).

I am thinking if I can one of the units to work I could buy a new crystal
for
the 2m ham band

Thanks,

Bill

From: "Radiodan" <radio@bigfoot.com>
Subject: Amplifers, what works on AM well?

In response to many requests from fellow BAers and AMers (3870 Wed night).

The Henry 8K is the best choice for truly loafing at a KW of AM carrier
output (or more).
The power supply is conservatively rated for 4KW+ output all day long!
It uses a 3CX3000A7 Eimac.

As you may know, when fully modulated to 100% the power requirements are 4
times the RF carrier power output.
This is why the other amps with cheap parts and limited designs fry when we
use them on AM for more than 30 seconds!
See specs at http://radiodan.com/Henry/henry_spec_list.htm

The AM operators already take enough shit from the channelized CB good ol' boy morons that spend every evening on 75 meters. Why would anyone want to make it worse by running illegally high power on AM?

---

From: "Radiodan" <radio@bigfoot.com>
Subject: Amplifers, what works on AM well?

Grant, your points are noted.
As it was so well pointed out to me by Stan, "It's kind of like owning a sports car and the speed limit is still only 65 MPH". Should we all own Ford Escorts?
That's ONE way to think of it.
Another way is: Loafing along certainly can't be discounted when you're talking about AM (or any continuos mode). Get into that long winded QSO on 75M and don't worry about your equipment.

Enjoy!

The number of responses I've received for this ad is incredible! 141 so
far and still coming. I asked several of the local "HAMS" what they
suggested I do with this radio and how much it was worth. Their concensus
was

"worth nothing", this without looking at it. One said
he'd give me $5.00 for it rather than see it go to the dump but I would
have to deliver it to his house. I'd like to thank all of you for the
offers,

I sold it to the guy who responded first he's also local. The
costs of properly crating it up and shipping any distance just isn't worth
it.Thanks again

>The 3500 and 7000 contacts were unused.
>
>I suspect this is a power transformer

It's a modulation transformer. The primary goes to the 811 plates and
B+ (apparently this transformer has separate windings for each tube --
in normal use the "B" terminals would be connected to each other
and to B+). The others are secondary windings. You'd use the "C"
(common) and one of the others to go to the transmitter's B+ and to
the plate circuit of the PA tube (through appropriate choke and
bypass cap). You'd choose the secondary tap appropriate
for the PA tube and B+ being used.

> [...] It became
>clear that the common B&B is a center-tap to the P-to-P readings.

Yep.

>Do the 3500, 5000, 7000 relate to the amperage ratings of this xfrmr?

No, they refer to the impedance of the stage to be modulated.

>Transformer #2 Make = UTC (New York), Model = VM-2
>
>A couple of the contacts were connected directly to the respective grids
>of the two 811 tubes.
>
>Is this an interstage transformer of some type?

Yes. It's the driver transformer that couples the speech amplifier
and driver stages to the 811 modulators.

What you've got here is a nice big ol' AM modulator.

From: bbird97082@aol.com (BBird97082)
Subject: Motorola FM Handie Talkie / question

I was wondering if anyone might be able to help me with the (3) units I
recently got from my Ham radio club. I am trying to find out what
voltage(s)
and batteries should be used to power my units. If you can help I will
certainly appreciate it.

My units are probably from around 1965 and are 10.5" long x 3" wide x 6"
high.
They are Model H23AAM-1101AH Handie-Talke FM Radiophone(s). They are made
to
be carried around like kind of like a lunchbox w a mic on a coiled cord.
The
top comes off with two latches on the ends. Inside there is a empty spot
for
a
battery about the size of an Eveready Lantern battery (on its side), a
switch
with a ext or int setting and two male plugs, one with two parallel contacts
(one smaller than the other), and the other male plug has four contacts,
(two
like _ _ and the other two perpendicular).

I am thinking if I can one of the units to work I could buy a new crystal
for
the 2m ham band

Thanks,

Bill

Post here once, but didn't see post listed. Am I doing something wrong?
Anyway, does anyone in the group know if Vibroplex ever manufactured a bug
for southpaws? If not, has anyone seen one modified? I have an original,
and before I try to modify it, I would rather seek out an original LH bug
if they were ever mfg'd. Tnx & 73 de KB7QQ.

From: n3ab@fast.net (JRS)
Subject: FS: RME 4300 Receiver

I have an RME 4300 ham band receiver for sale. Cosmetics are good. I'd rate it a 7.5 out of 10 and it should clean up to be even nicer. The main tuning knob does not look original, but the knob used looks reasonably close. Manual included. Asking $100.00 picked up or can meet within 100 miles for delivery (I'm near Allentown, PA). Add about $25.00 for UPS shipping if you need it shipped. Please e-mail if interested. Thanks.

From: "Radiodan" <radio@bigfoot.com>
Subject: Amplifers, what works on AM well?

In response to many requests from fellow BAers and AMers (3870 Wed night).

The Henry 8K is the best choice for truly loafing at a KW of AM carrier
output (or more).
The power supply is conservatively rated for 4KW+ output all day long!
It uses a 3CX3000A7 Eimac.

As you may know, when fully modulated to 100% the power requirements are 4
times the RF carrier power output.
This is why the other amps with cheap parts and limited designs fry when we
use them on AM for more than 30 seconds!
See specs at http://radiodan.com/Henry/henry_spec_list.htm

Grant, your points are noted.
As it was so well pointed out to me by Stan, "It's kind of like owning a sports car and the speed limit is still only 65 MPH". Should we all own Ford Escorts?
That's ONE way to think of it.
Another way is: Loafing along certainly can't be discounted when you're talking about AM (or any continuos mode). Get into that long winded QSO on 75M and don't worry about your equipment.

Enjoy!

Subject: Hallicrafters SX-101

The number of responses I've received for this ad is incredible! 141 so
far and still coming. I asked several of the local "HAMS" what they
suggested I do with this radio and how much it was worth. Their concensus
was

"worth nothing", this without looking at it. One said
he'd give me $5.00 for it rather than see it go to the dump but I would
have to deliver it to his house. I'd like to thank all of you for the
offers,

I sold it to the guy who responded first he's also local. The
costs of properly crating it up and shipping any distance just isn't worth
it.Thanks again
Gene Warner

>
>I suspect this is a power transformer

It's a modulation transformer. The primary goes to the 811 plates and
B+ (apparently this transformer has separate windings for each tube --
in normal use the "B" terminals would be connected to each other
and to B+). The others are secondary windings. You'd use the "C"
(common) and one of the others to go to the transmitter's B+ and to
the plate circuit of the PA tube (through appropriate choke and
bypass cap). You'd choose the secondary tap appropriate
for the PA tube and B+ being used.

> [...] It became
>clear that the common B&B is a center-tap to the P-to-P readings.

Yep.

>Do the 3500, 5000, 7000 relate to the amperage ratings of this xfrmr?

No, they refer to the impedance of the stage to be modulated.

>Transformer #2 Make = UTC (New York), Model = VM-2
>
>A couple of the contacts were connected directly to the respective grids
>of the two 811 tubes.
>
>Is this an interstage transformer of some type?

Yes. It's the driver transformer that couples the speech amplifier
and driver stages to the 811 modulators.

What you've got here is a nice big ol' AM modulator.

Date: 26 Mar 1998 01:37:29 GMT
From: bbird97082@aol.com (BBird97082)
Subject: Motorola FM Handie Talkie / question

I was wondering if anyone might be able to help me with the (3) units I
recently got from my Ham radio club. I am trying to find out what
voltage(s)
and batteries should be used to power my units. If you can help I will
certainly appreciate it.

My units are probably from around 1965 and are 10.5" long x 3" wide x 6"
high.
They are Model H23AAM-1101AH Handie-Talke FM Radiophone(s). They are made
to
be carried around like kind of like a lunchbox w a mic on a coiled cord.
The
top comes off with two latches on the ends. Inside there is a empty spot
for
a
battery about the size of an Eveready Lantern battery (on its side), a
switch
with a ext or int setting and two male plugs, one with two parallel contacts
(one smaller than the other), and the other male plug has four contacts,
(two
like _ _ and the other two perpendicular).

I am thinking if I can one of the units to work I could buy a new crystal
for
the 2m ham band

Thanks,

Bill

From: n3ab@fast.net (JRS)
Subject: FS: RME 4300 Receiver

I have an RME 4300 ham band receiver for sale. Cosmetics are good. I'd rate it a 7.5 out of 10 and it should clean up to be even nicer. The main tuning knob does not look original, but the knob used looks reasonably close. Manual included. Asking $100.00 picked up or can meet within 100 miles for delivery (I'm near Allentown, PA). Add about $25.00 for UPS shipping if you need it shipped. Please e-mail if interested. Thanks.

From: "Radiodan" <radio@bigfoot.com>
Subject: Amplifers, what works on AM well?

In response to many requests from fellow BAers and AMers (3870 Wed night).

The Henry 8K is the best choice for truly loafing at a KW of AM carrier
output (or more).
The power supply is conservatively rated for 4KW+ output all day long!
It uses a 3CX3000A7 Eimac.

As you may know, when fully modulated to 100% the power requirements are 4
times the RF carrier power output.
This is why the other amps with cheap parts and limited designs fry when we
use them on AM for more than 30 seconds!
See specs at http://radiodan.com/Henry/henry_spec_list.htm

Grant, your points are noted.
As it was so well pointed out to me by Stan, "It's kind of like owning a sports car and the speed limit is still only 65 MPH". Should we all own Ford Escorts?
That's ONE way to think of it.
Another way is: Loafing along certainly can't be discounted when you're talking about AM (or any continuos mode). Get into that long winded QSO on 75M and don't worry about your equipment.

Enjoy!

Subject: FS--TEN-TEC OMNI-A

I have a Model 545 OMNI-A for sale-- this transceiver is in excellent
condition, covers 160-10 meters, has CW filters, and puts out 140 watts on
all bands. It can also be used QRP by turning drive down. Price $350.00, I
will ship to lower 48.

From: Rick Williams <williams@brunnet.net>
Subject: FS or TRADE: ASTRON RS-35M

I bought this to power my UHF/VHF amps, but have since sold my satellite
station. This power supply is like new and has no nicks, marks or
dings of any kind. Anyone want to trade for a BA receiver in good shape
and working? I prefer general coverage, rather than ham bands only.

From: warn@ridgecrest.ca.us (Gene Warner)
Subject: Hallicrafters SX-101

The number of responses I've received for this ad is incredible! 141 so
far and still coming. I asked several of the local "HAMS" what they
suggested I do with this radio and how much it was worth. Their concensus
was

"worth nothing", this without looking at it. One said
he'd give me $5.00 for it rather than see it go to the dump but I would
have to deliver it to his house. I'd like to thank all of you for the
offers,

I sold it to the guy who responded first he's also local. The
costs of properly crating it up and shipping any distance just isn't worth
it.Thanks again
Gene Warner

>The 3500 and 7000 contacts were unused.
>
>I suspect this is a power transformer

It's a modulation transformer. The primary goes to the 811 plates and
B+ (apparently this transformer has separate windings for each tube --
in normal use the "B" terminals would be connected to each other
and to B+). The others are secondary windings. You'd use the "C"
(common) and one of the others to go to the transmitter's B+ and to
the plate circuit of the PA tube (through appropriate choke and
bypass cap). You'd choose the secondary tap appropriate
for the PA tube and B+ being used.

> [...] It became
>clear that the common B&B is a center-tap to the P-to-P readings.

Yep.

>Do the 3500, 5000, 7000 relate to the amperage ratings of this xfrmr?

No, they refer to the impedance of the stage to be modulated.

>Transformer #2 Make = UTC (New York), Model = VM-2
>
>A couple of the contacts were connected directly to the respective grids
>of the two 811 tubes.
>
>Is this an interstage transformer of some type?

Yes. It's the driver transformer that couples the speech amplifier
and driver stages to the 811 modulators.

What you've got here is a nice big ol' AM modulator.

From: bbird97082@aol.com (BBird97082)
Subject: Motorola FM Handie Talkie / question

I was wondering if anyone might be able to help me with the (3) units I
recently got from my Ham radio club. I am trying to find out what
voltage(s)
and batteries should be used to power my units. If you can help I will
certainly appreciate it.

My units are probably from around 1965 and are 10.5" long x 3" wide x 6"
high.
They are Model H23AAM-1101AH Handie-Talke FM Radiophone(s). They are made
to
be carried around like kind of like a lunchbox w a mic on a coiled cord.
The
top comes off with two latches on the ends. Inside there is a empty spot
for
a
battery about the size of an Eveready Lantern battery (on its side), a
switch
with a ext or int setting and two male plugs, one with two parallel contacts
(one smaller than the other), and the other male plug has four contacts,
(two
like _ _ and the other two perpendicular).

I am thinking if I can one of the units to work I could buy a new crystal
for
the 2m ham band

Thanks,

Bill

Hello,

I have for sale the following items. All are in good working
condition with manuals.

Yaesu FT101b HF transceiver with Landliner speaker/patch
With mic, manual(service), radio works good, looks good
full output. Will include CW filter(not installed)
$300.00 plus shipping

Yaesu YO100 Monitor scope
Looks good, works good
with manual
$160.00 plus shipping

Kenwood TH205 2 mtr HT.
With stand charger and manmual
Looks good and works good
Has DTMF but is a basic HT , LCD display, 12V 800 Mah battery
$135.00 plus shipping

MFJ 941 antenna tuner
300 Watt power/SWR
$50.00 plus shipping

Diawa 2 Mtr amp, 5 in 35 out
Works fine, no manual
has preamp, FM/SSB
$60.00 plus shipping

If interested contact via EMail at: sts@ac.net

Thanks and 73

Subject: Left handed Vibroplex bug

Post here once, but didn't see post listed. Am I doing something wrong?
Anyway, does anyone in the group know if Vibroplex ever manufactured a bug
for southpaws? If not, has anyone seen one modified? I have an original,
and before I try to modify it, I would rather seek out an original LH bug
if they were ever mfg'd. Tnx & 73 de KB7QQ.

From: n3ab@fast.net (JRS)
Subject: FS: RME 4300 Receiver

I have an RME 4300 ham band receiver for sale. Cosmetics are good. I'd rate it a 7.5 out of 10 and it should clean up to be even nicer. The main tuning knob does not look original, but the knob used looks reasonably close. Manual included. Asking $100.00 picked up or can meet within 100 miles for delivery (I'm near Allentown, PA). Add about $25.00 for UPS shipping if you need it shipped. Please e-mail if interested. Thanks.

From: "Radiodan" <radio@bigfoot.com>
Subject: Amplifers, what works on AM well?

In response to many requests from fellow BAers and AMers (3870 Wed night).

The Henry 8K is the best choice for truly loafing at a KW of AM carrier
output (or more).
The power supply is conservatively rated for 4KW+ output all day long!
It uses a 3CX3000A7 Eimac.

As you may know, when fully modulated to 100% the power requirements are 4
times the RF carrier power output.
This is why the other amps with cheap parts and limited designs fry when we
use them on AM for more than 30 seconds!
See specs at http://radiodan.com/Henry/henry_spec_list.htm

From: Gary W8PU <w8pu@your-net.com>
Subject: Amplifers, what works on AM well?

The AM operators already take enough shit from the channelized CB good
ol' boy morons that spend every evening on 75 meters. Why would anyone
want to make it worse by running illegally high power on AM?

------------------------------

Date: Tue, 24 Mar 1998 11:22:10 -0800
From: "Radiodan" <radio@bigfoot.com>
Subject: Amplifers, what works on AM well?

Grant, your points are noted.
As it was so well pointed out to me by Stan, "It's kind of like owning a sports car and the speed limit is still only 65 MPH". Should we all own Ford Escorts?
That's ONE way to think of it.
Another way is: Loafing along certainly can't be discounted when you're talking about AM (or any continuos mode). Get into that long winded QSO on 75M and don't worry about your equipment.

Enjoy!

From: warn@ridgecrest.ca.us (Gene Warner)
Subject: Hallicrafters SX-101

The number of responses I've received for this ad is incredible! 141 so far and still coming. I asked several of the local "HAMS" what they suggested I do with this radio and how much it was worth. Their concensus was

"worth nothing", this without looking at it. One said he'd give me $5.00 for it rather than see it go to the dump but I would have to deliver it to his house. I'd like to thank all of you for the offers,

I sold it to the guy who responded first he's also local. The costs of properly crating it up and shipping any distance just isn't worth it.Thanks again
Gene Warner

>
>I suspect this is a power transformer

It's a modulation transformer. The primary goes to the 811 plates and
B+ (apparently this transformer has separate windings for each tube --
in normal use the "B" terminals would be connected to each other
and to B+). The others are secondary windings. You'd use the "C"
(common) and one of the others to go to the transmitter's B+ and to
the plate circuit of the PA tube (through appropriate choke and
bypass cap). You'd choose the secondary tap appropriate
for the PA tube and B+ being used.

> [...] It became
>clear that the common B&B is a center-tap to the P-to-P readings.

Yep.

>Do the 3500, 5000, 7000 relate to the amperage ratings of this xfrmr?

No, they refer to the impedance of the stage to be modulated.

>Transformer #2 Make = UTC (New York), Model = VM-2
>
>A couple of the contacts were connected directly to the respective grids
>of the two 811 tubes.
>
>Is this an interstage transformer of some type?

Yes. It's the driver transformer that couples the speech amplifier
and driver stages to the 811 modulators.

What you've got here is a nice big ol' AM modulator.

From: bbird97082@aol.com (BBird97082)
Subject: Motorola FM Handie Talkie / question

I was wondering if anyone might be able to help me with the (3) units I recently got from my Ham radio club. I am trying to find out what voltage(s)
and batteries should be used to power my units. If you can help I will certainly appreciate it.

My units are probably from around 1965 and are 10.5" long x 3" wide x 6" high.
They are Model H23AAM-1101AH Handie-Talke FM Radiophone(s). They are made to
be carried around like kind of like a lunchbox w a mic on a coiled cord. The
top comes off with two latches on the ends. Inside there is a empty spot for
a
battery about the size of an Eveready Lantern battery (on its side), a switch
with a ext or int setting and two male plugs, one with two parallel contacts
(one smaller than the other), and the other male plug has four contacts, (two
like _ _ and the other two perpendicular).

I am thinking if I can one of the units to work I could buy a new crystal for
the 2m ham band

Thanks,

I just bought 100 yards of 80 pound test dacron leader cord for six bucks. It's stranded and about the same diameter as the origional cord on my '49 Zenith. It's white with a green stripe. I'm sure it will outlive me, being synthetic dacron.

Hi,

Thanks for reading. First of all, I'm selling Computer Ribbons. Yes, I KNOW there are N.G.s for this type of thing, but I ALSO know that I see LOTS of old printers being used, bought and sold by hams. SO, if you have any older printers you need ribbons for, let me know. I can E-Mail you a list of what I have. I'm selling all of them for $1.00 each plus shipping. Of course the more you buy, the cheaper the cost will be. If I have a quantity of the type you use, I'll make you a GOOD deal, if you take all of that type, that I have on hand. Well worth your efforts.

I have about 300 total of a few different types. They are being sold as is, no returns, but are NEW in factory sealed packages. YOU could save big time if you use your printer alot as in Club Newsletters or other heavy printing uses. Who knows, your printer may quit before you could use up all of the ribbons.

Old printers are like old radios, they collect dust if not used, lose financial interest, and yes, they COULD be classified as and used for BOAT ANCHORS.

Maybe you have an old printer you've been wanting to sell, but couldn't find a ribbon to go with it, and people didn't want to buy it for that reason. Maybe you did see a listing somewhere for a ribbon, but it was more than you wanted to invest in a printer you planned on selling off. You can offer a few with it as an incentive, and it won't break your wallet. With extra ribbons, it would make the deal more attractive. You should have little trouble recouping the cost of the ribbons with the deal.

If interested, E-Mail me directly.

Thanks

Lou

For sale:

Hallicrafters SX-43 receiver, complete but not tested (line cord is bad and I didn't want to plug it in!), with copy of manual and Sams Photofacts folder, cosmetically so-so, electrically complete and definitely restorable, I just don't have the time to take it on myself. Price $50 plus actual shipping.

Hallicrafters S-38B receiver, working, electrolytic and coupling capacitors replaced, all tubes good, cabinet needs refinishing, knobs are missing (weren't there when I got it!), with copy of Sams Photofacts folder and a partially complete parts unit chassis (no cabinet, many significant parts missing). I was planning to restore this one completely; got it working, then haven't had the time to do any more with it. Price $40 plus actual shipping.

Interested? Email me.

Concerning Sonar Radio somebody asked about. I remember Sonar from the '50s when I was a teen-ager. I still have one of their low-pass filters.

According to Moore's "Communications Receivers," there was a Sonar Radio Corp. in Brooklyn, N.Y., (last address 3050 W. 21 St.) that made mobile-type receivers in the early '50s. I'm not sure whatever happened to the company.

"Radiodan" <radio@bigfoot.com> wrote:
>The Henry 8K is the best choice for truly loafing at a KW of AM carrier
>output (or more).

No way.

I much prefer the Continental 317C transmitter, once the first choice
of dozens of America's finest 50 KW blowtorches on the AM dial.

Now obsolete, this fine box with a Collins heritage is easily
available from several brokers of used broadcast eqipment at nearly
giveaway prices and will easily fit in anyone's two car garage.

Why mess with "amateur" equipment, when you can use the stuff
professionals use- go beyond "loafing" at any power level- swing in
the hammock with a margarita in hand for only a few kilobucks.

I have a neat little transmitter/exciter/vfo made by Sonar called a
model CFC. (Calibrated Frequency Control)
It supposedly puts out about 5 watts. 6L6 final, I think. The
schematic is dated 1948.
The manual says the dial is also calibrated for the "proposed 15 meter
band."

It's pretty fancy in that it includes a 100 Khz crystal calibrator, and
I think another osc or socket for other reference frequencies.

Black wrinkle finsh cabinet, tall and skinny. (about 6 in wide, 10 in
tall, 14 in deep, I'd guess.)

Oh yeah--it also has a sidetone generator for keying monitoring. I
think it's a neon relaxation osc.

The output isn't bandswitched; there are separate RCA jacks for the 80
and 40 meter outputs.

I hadn't heard of Sonar either, until a guy gave me this one.

Unless there were two companies with "Sonar" in the name, Sonar was quite
a name in FM communications equipment. I remember reading something about
it having roots in amateur radio, the founder playing with narrow band FM
on the HF bands way back, and then getting into the two way business.

Sonar (at least the one I am thinking of) was still around in the early
seventies; I can picture a review in QST for a 2m FM receiver at least.

# 4617. Re: Regency HR-2A & B Crystal Compatibility

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-03-26 00:00:00 UTC
From: Bruce Barley <lbbarley@feist.com>
Message-ID: <01bd58ab$2083c380$a607f7c6@default>
Source record: 107782
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.amateur.equipment

The HR-2A uses the following: TRANSMIT: XMIT FREQ/ 24 - example:
146.94/24 = 6.1225 MHZ

RECEIVE: (receive freq. - 10.7)/ 3 - example: (146.94 - 10.7)/ 3 =
45.41333 MHZ

This informatin taken from Section 1.8 Crystal Specifications of Service
Manual for HR-2A.

>help you.
>Sandy W5TVW

Thanks for your reply, I was looking for any suggestions to improve it,
and I have not received such notes, but LA4OE sent me a complete
collection of circuit diagrams.
I may modify the AGC circuit using few 1N4148 such that RF gain is
always active, but indicator tube does not show RF gain setting. Some
timeconstant has to be added (see Drake 2-B) using 47k in series with
1uF, and 2M2 (in paralell with 1N4148) to RF gain.
I also wish to test an improved product detector. The CW detector is not
a product detector, it was made before ssb, but W5DA indicates a
possible way to improve this, 73 June 79, page 33 fig 3. The IF input to
this valve 8V1may also need 1:10 (?) attenuation - 560pF/5600pF
combinations of grid circuit capacitors.

wonder why Germans very seldom are seen on the english newsgroups, I
have tried to use some German groups, but they are usually very much
afraid of replying, one must write in German, while French and Dutch
amateurs frequently post comments to English newsgroups. Several Germans
post in English to the VHF/UHF/SHF newsreflectors I subscribe to.

Source record: 107789

I am trying to get a Dentron MLA-2500 amp working correctly. Have some questions. Driving it with a FT-1000D

Book talks about maybe needing to remove swamping resister (R1) if you are running a solid state rig. Thats all it says. Gives you no clue as to what you would notice so you would know to remove the input swamping resistor.

What should I see driving it with say 130 watts in. The grid ma never goes above 50ma no matter what I do. Book says to keep it under 200ma. Need general info on running this amp. Power in/out. Typical plate/grid ma etc.

Should I cut out swamping resister. Not enough info in manual (typical operating characteristics etc).

Yes, Vibroplex made LH bugs. Typically they were made on special
order at
a few dollars premium. There are not many around however. They are
still in
business. Call the factory and see if they can help you. They have a
web site
also. You can get to it from the page shown below.

The 8875s in the final only require 80 watts of drive. Many tube-type transmitters of the same vintage as the MLA-2500 put out 100+ watts. The swamping resistor was installed in the interest of engineering purity to keep the tubes from being "overdriven" - if you believe in that sort of thing.

Many solid state radios of that era didn't make the 100+ watts of power, so you didn't need to "burn off" the excess drive.

HI folks,
Still have a few of the following connectors left:

1. 11 pin power plugs and mating 11 pin female connectors as used on Heath Tube gear, some Swan gear and a few other radios. These are new amphenol units. The male is brown micalex amphenol while the female is black bakelite amphenol. I am out of the cord caps. A mated pair is $9 first class postage paid conus

2. Two offset pin mike connectors and chassis receptacle, new amphenol with all hardware, $10 for the pair post paid first class conus

Tnx for the read.

Bob, KE6F

For Sale:

2" Scope modules from GRC-106 Md522 data modem depot spares. Line new condition, tested. Full mu metal shielding plus cast aluminum case. runs on a nominal 20-22vdc and couple hundred ma. self contained DC/DC converter supplies all potentials for CRT. Unit also has two identical AC audio amps and deflection drivers for X/Y cross hair tuning indicator use along with a squelch circuit to kill the display in the absense of tones (TTY or what have you). Connections to the module are via a standard dB9 connector. All adjustmens are available though milled slots in the die cast aluminum housing, The intensity adjustment is made via a standard value pot via the db9 connector. Will supply full sized first generation copy schematic diagram and connection notes. Could be converted to Modulation Monitor with some internal conversion work (replace the transistorized audio amplifier(s) with broad band IC amps.

$50 post paid first class conus.

Tnx for the read

Source record: 107897

I was wondering if anyone might be able to help me with the (3) units I recently got from my Ham radio club. I am trying to find out what voltage(s) and batteries should be used to power my units. If you can help I will certainly appreciate it.

My units are probably from around 1965 and are 10.5" long x 3" wide x 6" high. They are Model H23AAM-1101AH Handie-Talke FM Radiophone(s). They are made to be carried around like kind of like a lunchbox w a mic on a coiled cord. The top comes off with two latches on the ends. Inside there is a empty spot for a battery about the size of an Eveready Lantern battery (on its side), a switch with a ext or int setting and two male plugs, one with two parallel contacts (one smaller than the other), and the other male plug has four contacts, (two like _ _ and the other two perpendicular).

I am thinking if I can one of the units to work I could buy a new crystal for the 2m ham band

Thanks,

Bill

From: "Radiodan" <radio@bigfoot.com>
Subject: Amplifers, what works on AM well?

In response to many requests from fellow BAers and AMers (3870 Wed night).

The Henry 8K is the best choice for truly loafing at a KW of AM carrier
output (or more).
The power supply is conservatively rated for 4KW+ output all day long!
It uses a 3CX3000A7 Eimac.

As you may know, when fully modulated to 100% the power requirements are 4
times the RF carrier power output.
This is why the other amps with cheap parts and limited designs fry when we
use them on AM for more than 30 seconds!
See specs at http://radiodan.com/Henry/henry_spec_list.htm

Subject: Amplifers, what works on AM well?

The AM operators already take enough shit from the channelized CB good
ol' boy morons that spend every evening on 75 meters. Why would anyone
want to make it worse by running illegally high power on AM?

------------------------------

Date: Tue, 24 Mar 1998 11:22:10 -0800
From: "Radiodan" <radio@bigfoot.com>
Subject: Amplifers, what works on AM well?

Grant, your points are noted.
As it was so well pointed out to me by Stan, "It's kind of like owning a
sports car and the speed limit is still only 65 MPH". Should we all own Ford
Escorts?
That's ONE way to think of it.
Another way is: Loafing along certainly can't be discounted when you're

talking about AM (or any continuos mode). Get into that long winded QSO on 75M and don't worry about your equipment.

Enjoy!

Subject: FS or TRADE: ASTRON RS-35M

I bought this to power my UHF/VHF amps, but have since sold my satellite station. This power supply is like new and has no nicks, marks or dings of any kind. Anyone want to trade for a BA receiver in good shape and working? I prefer general coverage, rather than ham bands only.

Subject: Hallicrafters SX-101

The number of responses I've received for this ad is incredible! 141 so far and still coming. I asked several of the local "HAMS" what they suggested I do with this radio and how much it was worth. Their concensus was

"worth nothing", this without looking at it. One said
he'd give me $5.00 for it rather than see it go to the dump but I would
have to deliver it to his house. I'd like to thank all of you for the
offers,

I sold it to the guy who responded first he's also local. The
costs of properly crating it up and shipping any distance just isn't worth
it.Thanks again
Gene Warner

>
>I suspect this is a power transformer

It's a modulation transformer. The primary goes to the 811 plates and
B+ (apparently this transformer has separate windings for each tube --
in normal use the "B" terminals would be connected to each other
and to B+). The others are secondary windings. You'd use the "C"
(common) and one of the others to go to the transmitter's B+ and to
the plate circuit of the PA tube (through appropriate choke and
bypass cap). You'd choose the secondary tap appropriate
for the PA tube and B+ being used.

> [...] It became
>clear that the common B&B is a center-tap to the P-to-P readings.

Yep.

>Do the 3500, 5000, 7000 relate to the amperage ratings of this xfrmr?

No, they refer to the impedance of the stage to be modulated.

>Transformer #2 Make = UTC (New York), Model = VM-2
>
>A couple of the contacts were connected directly to the respective grids
>of the two 811 tubes.
>

>Is this an interstage transformer of some type?

Yes. It's the driver transformer that couples the speech amplifier
and driver stages to the 811 modulators.

What you've got here is a nice big ol' AM modulator.

Thought the following might be of interest to hams reading list traffic.
Do not send comments to me as I am just forwarding this on from a smaller
maritime list:

Thanks & 73

--------- Begin forwarded message ----------
Hello Everyone,
have just got this news item from the Net. Has
anybody
out there heard anything , or got any comments or info,on this Intruder
?

"I have just found out about a French HF radar that is located on
the south coast of Puerto Rico that will be operating from March
8th to April 8th on 7.2, 14.2, and 21.3 MHz. They are working
informally with a NASA rocket program in Puerto Rico and tried to
get the FCC to give them some type of license for this operation.
Apparently the State Department was involved as well and they
decided to turn it all over to the FCC and NASA. The FCC has
said that it cannot give any license for any such operations for
NASA or the French to use Amateur bands for the specified transmissions
and period of operations. It did grant an informal authorization
to proceed on a non-interference basis which means that if an incident
of interference occurs, the French group must shut down their operations
immediately. I thought you should all know about this since the
WPX contest is coming up this weekend and QRM is bad enough without
having any extra signals of unknown origin on the bands. The French
radar is located at Ft. Allen, Puerto Rico at longitude 18N and
latitude 66.5W. It will use radar pulses of 100-200 uS with an
interpulse period of 1-2 mS. It will use arrays of stacked yagis
which will be beaming 12 degrees west of north (pretty close to
right at the US east coast) and a power of 300 watts.

The Point-of-Contact for interference reporting is Mr. Henry
Schuett at 216-433-5545 and email at hschuett@lerc.nasa.gov or
Felipe (no last name given) at 757-824-1623 and no Email given.
They are then supposed to contact the French and tell them to
shut down their operations.

I have not heard them yet myself but another ham in Puerto Rico
did hear them we think and independently reported interference
to the Navy Communications Direction-Finding site at Sabana Seca,
Puerto Rico. He did not know about this operation at the time
he heard them and reported them.

It is hoped that nobody will hear them much, but just in case, it looks like the ham spectrum is being protected and the hams have some actions than can be taken.

73 Jim WA3FET/KP4 at Arecibo, Puerto Rico "

A later posting says :-

" I have worked with Hank Schuett for a number of years. He is the NASA HF RF
Spectrum Manager, and a REAL GOOD GUY. He is also a ham, and will take care
of the amateur interests to the greatest degree possible.

My $.02 worth...

Dave Maples, WB4FUR "

Source record: 107801
Cross-posted to: rec.radio.amateur.homebrew,rec.radio.amateur.boatanchors

For Sale/ Trade: MOTOROLA B+ / Filament Transformer. OEM Part #: 25C 879211 1386252

If you are scratch building a power supply for a home built transmitter consider the following:

Size: 4.5 x 5 x 6 inches Steel Can - Bottom Flange mount - potted

Primary:
120VAC

Secondaries:
5.1 VAC
6.3 VAC
350 - 175 -0- 175 - 350 (ie: 700VAC center tapped with taps also for 350VAC)

This transformer is from a Motorola Base Station used in Public Service at Coffeyville, Kansas - belived to date from the mid 1960's (ref: last digits following part # shown.) Since the transformer is potted, I don't have access to measure the core cross sectional area, so I have no idea about the actual power rating of the transformer. But bear in mind that this transformer was built for CONTINUOUS COMMERCIAL DUTY and used in Police/ Fire dispatching and powered a base station transmitter.

Asking: $35 cash OR: trade for qty 10 (ten) 40673 dual gate mosfets OR: trade for qty 20 (twenty) NE612 ic's OR: 25 (twenty five) NE602 ic's. Please add shipping for 10 pounds. Anything over 10 pounds shipping weight, I will cover. Shipment will come from Wichita, Kansas 67219 Insurance extra.

>and before I try to modify it, I would rather seek out an original LH bug
>if they were ever mfg'd. Tnx & 73 de KB7QQ.

Yes, they manufactured lefthanded Vibroplexes in most models. They were usually special order, and a few bucks extra.

Vibroplex is still in business, and still making bugs as well as keyer paddles. There prices are of course much higher than yesteryear (I think the standard model Original is $100) but not that much more when you adjust for inflation.

Personally I prefer a Vibroplex to any other key. Properly adjusted, you can send practically perfect code. A bug will key almost any rig, and will outlast several owners.

See the Vibroplex web page at:

http://www.vibroplex.com

You might also be interested in The Telegraph Office:

http://fohnix.metronet.com/~nmcewen/tel_off.html

They have all kinds of stuff, including the US Army TM about how to adjust a bug (1957 edition)

And be sure to check out The Vibroplex Collector's Page:

http://www.la.ca.us/frandy/

All kinds of great info, and excellent pictures.

HELP, I'm looking for 3 General Radio wire wound pots. The ones I need are large, aprox 2 3/4" dia, winding. The knob has a shaft that goes all the way
thru and the wiper attaches to the shaft. I bought what appears to be a Leutz C-7 Special at the Charlotte meet last weekend and these are missing. If you can help, Please let me know.
E-mail address is: kc4yoy@trellis.net

Thanks, Ron Lawrence

Only 50 kW? What with NSS shutting down, 500 KW - 1 MW should be available. You'd just need to retune the tx (actually 2 of them) from 20 kHz to your favorite HF band ;-)

In article <6fdtv1$h0$1@news1.rmi.net>, temporarily@netone.com (Bill, KD0HG) wrote:

"Radiodan" <radio@bigfoot.com> wrote:
>The Henry 8K is the best choice for truly loafing at a KW of AM carrier
>output (or more).

No way.

I much prefer the Continental 317C transmitter, once the first choice of dozens of America's finest 50 KW blowtorches on the AM dial.

Now obsolete, this fine box with a Collins heritage is easily available from several brokers of used broadcast eqipment at nearly giveaway prices and will easily fit in anyone's two car garage.

Why mess with "amateur" equipment, when you can use the stuff professionals use- go beyond "loafing" at any power level- swing in the hammock with a margarita in hand for only a few kilobucks.

"R.E. Dodson WB5APD EM84ak" <wb5apd@stc.net> wrote:

>I am trying to get a Dentron MLA-2500 amp working correctly. Have some
>questions. Driving it with a FT-1000D

Note: Dentron marketers called the amplifier a model "2500".
Until the tubes fry, it will not live long running at 2500 watts
input!

>Book talks about maybe needing to remove swamping resister (R1) if you
>are running a solid state rig. Thats all it says. Gives you no clue as
>to what you would notice so you would know to remove the input swamping
>resistor.

The reason for this is when the amp was designed 20-some years ago,
solid state exciters were usually low power, compared to the sweep
tube powered Swans, Drakes, etc. Removing the resistor will, of
course, increase drive to the amplifier.

>What should I see driving it with say 130 watts in. The grid ma never
>goes above 50ma no matter what I do. Book says to keep it under 200ma.
Do not ignore this- Overdriving the 8875 tubes is the one thing you
can do to almost always kill them. Been there, done that.
The most expensive 1/4 db power increase I ever achieved.

Have you checked the reflected power between your exciter and the
amplifier? A bad match will reduce grid current and drive. If so,
inspect the input circuit components, including ohming out the
swamping resistor. Is everything OK? Any burnt parts? Is the resistor
OK?
Are both tubes OK, or is one shot? Try running the amp on one tube at
a time, removing the other one, at reduced drive and loading. Do both
match reasonably well?

>Need general info on running this amp. Power in/out. Typical plate/grid
>ma etc.
It's been years since I sold my own MLA2500...Is this information not
in the manual? As I recollect, plate current peaked at almost an amp,
or about 2 KW peak input and about 1200-1300 watts peak output.
If you're getting output power in that range, call it good and don't
be concerned about driving the amp harder.

Once again, *never* overdrive the tubes in an effort to increase
output power. You -will- fry the grids, which will probably short.

>Should I cut out swamping resister. Not enough info in manual (typical
>operating characteristics etc).

Are you getting 1200-some watts out? Then, IMO, no.
Getting or running the legal limit out of a pair of 8873/8874/8875 tubes is a real stretch You can get close, but you'll really be beating up the bottles. Note that most other "legal limit"amplifiers using this series of tubes run three, not two, in parallel.

Figure it out- a pair of 8875s has about 600 watts of plate dissipation.. Amplifier efficiency is maybe 60%. Duty cycles vary but at an inpput of 2KW, you'll be getting maybe 1200 watts out, leaving 800 watts dissipated by the tubes, key down. Just about right for intermittent voice service.

This is why I sold my own MLA2500. Amplifier cooling was insufficient at a mile+ above sea level here in Colorado. Tubes were expensive (I think the Russians make them now). Built my own amps since then using glass bottles cooled mostly by radiation, not forced air. (813s, 4-400s, etc)

# 4676. for sale: NC-303 & SPEAKER

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-03-27 00:00:00 UTC
From: ax9909@aol.com
Message-ID: <1998032722503201.RAA11185@ladder01.news.aol.com>
Source record: 107835

Very nice NC-303 & matching speaker, with xtal calibrator. This radio is in very nice shape, the cabnet has some marks as does the speaker but not bad at all.
the emblem on the speaker is off but is there and can be put back on. The face on the 303 is near perfect for a 40 year old radio. Every thing seems to work good
and there are no modifications to this classic! The manual [original] is included.

I am located in the Milwaukee area and realy dont want to ship this thing as it is quite heavy! I would be willing to drive up to 100 miles to meet someone half way!
If your looking for one of these things for your shack, this could be it.

Asking: $225.00 or would trade for other ham gear. Might be interested in trading
for a Swan 500c or similar tranceiver, must be in good physical and electrical condition! If interested, e-mail me at.......Ax9909@AOL.COM

The reason why "left handed" bugs are so rare is that you would have
to be a total retard to not be able to learn to send making dashes to
one side and dots to the other- left or right.
Left and versus right hand with semiautomatic (or fully automatic)
telegraph keys simply doesn't make sense !

Hi, all!!
If you have any AN/ARC-5, SCR-274-N stuff laying around the shack...I want to buy it! Xmtr's, rcvr's, control boxes, cables, wiring, dynamotors, racks...anything! If you have any old dead ARC-5 chassis laying around, I'll take those, too!
Just e-mail me (reply or address below) with what you have and I'll make you an offer. Naturally, I'll pay shipping. Clean out that shack and make some money.

The only sure way to test a tube is to replace it with a good one.

The TV-7 (or TU-7) may be a military mutual transconductance tester, the best kind. If you just have to have a tester, and my aged hardened memory is correct the TU-7 is an excellent choice

I do work work for Harris, but for the Electronic Systems Sector in Palm Bay,
FL; not the broadcast division in Illinois.

I realize that Harris makes broadcast equipment, but we have no communications
with them at all and do not share technology. We might as well be another
company (I guess that's the way big companies operate). We don't even design
with Harris Semiconductors and they're right across the street. They're too
expensive (they won't even give other divisions a price break).

Anyway, if anyone knows the titles of some books or papers, please let me
know. I already tried Harris and got nowhere.

Thanks, Al

For an AA5 (or any AM Broadcast Superhet for that matter) this method works almost as well as having the test equipment. With just a single conversion IF, any mistakes are easy to correct. One possible instruction that was left out... if the antenna coil is a loopstick (ferrite bar, etc) and is either adjustable by moving the core or the coil over the core, tune the radio back to a station near 600kHz and adjust the coil for strongest signal.

# 4696. FS:Knwd TS-680 hf-6mtr, 6mtr brick

# 4697. FS: *Big* AM transmitter

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-03-28 00:00:00 UTC
From: jeffreyh@Hawaii.Edu
Message-ID: <6fk0ql$scg@news.Hawaii.Edu>
Source record: 107658

The following appeared on the BA email list. Please contact the seller, not me!

I got a call from W7GN who says he has a large homebrew AM rig for sale. I just paid a visit and saw it. The rig is in Portland, OR and would be difficult to ship (nothing is impossible, I guess). I don't know if Phil is willing to ship it or not. You can call Phil Anderson, W7GN, at 503-658-5652 if you are interested. Phil is not on the internet.

Here is what I saw: A six foot rack with no wheels, black wrinkle, that contains a pair of 250THs in the final. The B+ supply is in a separate "box" that is about 4 feet high and 2 feet wide by 2 feet deep, also black wringkle. The final uses large B&W plugin coils and there are coils for 10, 15, 20, 40, and 80, I believe. Also in the 6 foot rack is a single 813 buffer stage with bandswitched coils and an 807 stage to drive that, also with bandswitched coils. There is at least one bias supply that used large batteries that are long since dead and gone. A bias supply would have to be constructed to replace the batteries. I saw one spare 813 but no spare 250THs. In the power supply box, which is on large (approximately 4") castors, is the high level modulator which also uses a pair of 250THs. There is a BIG modulation transformer in there. The plate transformer is rated a 6200 volts and 2 KVA but has a 115 Volt primary. There is also a fairly large Variac in the B+ supply and the rectifiers are a pair of 872s in fullwave. There are meters on everything . . . I think I counted eight total. In yet another black wrinkle box is the exciter which starts with a Collins PTO unit similar to what you find in a 32V1 or 310B. Also in that box are frequency multipliers to get to the various bands and what appeared to be an 807 output stage. The exciter box is about 1 foot on each side and 1 foot tall. I did not see a microphone.

This transmitter was constructed by W7GUI around 1948. W7GUI later became W7RS and then became a silent key in about 1975. There is a "test date" on the Collins PTO unit that is sometime in November of 1947. I do not believe there is any documentation on any of this rig. Overall, the construction is excellent homebrew and you will love the interlocked doors on the front panel of the final with windows for viewing the 250THs and access for changing the final tank coils.

Other points of interest are the delay relays that prevent the B+ from coming on too fast at turn on and the output which is standard link coupling used with the B&W coils. I did not see a match box or antenna tuner or low pass filter for this rig. Other than being enclosed on all sides in a 6 foot rack, the final is not shielded so it would probably cause some interesting TVI problems if used "as is". This rig has been storage in a fairly dry basement for 20-25 years and weighs several hundred pounds.

My only interest in this rig is trying to help W7GN get some money out of it for his mother and keeping it from being scrapped. If I did not have wall to wall scopes in my 7 car garage, it would be great fun for me to put this rig back on 75 AM and stir up some activity on that mode. Somebody will have a blast with this thing. I think you could get a copy of a photo of it from W7GN for an SASE. I will have a framed picture of it at the Eugene Hamfest at my table this Saturday.

W7GN is open to offers and thinks the B+ transformer is the most valuable part of it. I told him I thought the Variac and the modulation transformer had some value as well. There is no real way to test these to be absolutely sure they are still good. It would be best to keep the whole thing intact since it really is a fine example of late 40's construction.

>I have an Electrovoice microphone model S-7........ Can anyone tell me
anything
>about this unit, such as approximate age, quality and relative value? I
>would certainly appreciate it.

Best way to find out what it does and how to test it, is to call Electrovoice.
They are, or at least were the last time I called them, in Buchanan, Michigan.
I found an EV S-3 at a garage sale years ago, and they were very helpful in
directing me to places to bring it back to life.

15 ohm? Seems low...Most of them were 150 ohm...however , a ribbon could
conceivably be lower and would require a transformer to bring a match to the
input transformer of the type in use when that Mic was made.

Sounds like a nice find. Call EV first...

I have an RME 4300 ham band receiver for sale. Cosmetics are good. I'd rate it a 7.5 out of 10 and it should clean up to be even nicer. The main tuning knob does not look original, but the knob used looks reasonably close. Manual included. Asking $100.00 picked up or can meet within 100 miles for delivery (I'm near Allentown, PA). Add about $25.00 for UPS shipping if you need it shipped. Please e-mail if interested. Thanks.

Source record: 107715

Hello Ken,

The HQ-100 series was made in several models:

The HQ-100 was introduced in late 1956. It was available as the HQ-100 and the HQ-100C, the "C" denoting a built-in 12 hour clock. Both were 10 tube designs, (8 tubes plus 1 VR tube and 1 rectifier tube). The set was a typical single conversion general coverage two dial design, using 1 RF and 2 IF stages, and a 455 kc IF. Base price was $170, and the clock was $10 more. The HQ-100 was reviewed in the January, 1957 issue of QST.

The Q multiplier is a regenerative device used to increase selectivity or provide a rejection notch. It is a sort of "poor man's crystal filter". It works by using regeneration to increase the effective Q of a tuned circuit. in the IF amplifier. The trouble is that the shape factor is usually poor, and the Q multiplier requires careful adjustment. The circuit will oscillate if the regeneration is increased too much.

In the HQ-100, the Q multiplier is used for the BFO by making it oscillate. This means that it can be used as a BFO, or a selective device, but not both functions at once - a BIG disadvantage.

In 1961, the HQ-100A was introduced. This model had a separate BFO, which is a big improvement. The HQ-100AC is an A model with a 24 hour clock.

Also introduced was the HQ-105TR, which is an HQ-100 with a built in 5 watt 10 (or 11) meter 5 watt crystal controlled AM transmitter.

Both the HQ-100A and the HQ-105 TR were reviewed in the December, 1961 issue of QST.

They are pretty good receivers (I've never owned one, but have used several models) for their time and design, though. Don't know what one is worth today.

73 de Jim, N2EY

I have the following Radio, and electronic equipment for sale. Reasonable offers or trades for radio and Pentium computer EQ. will be considered. All working last time tested unless noted. Shipping is extra.
Thanks

• Tempo-1- Tube type Ham Transceiver/with Power Supply 80-10 meters. Looks good and works well. 100W output. $200

. Siltronix 1011D excellent condition both in looks and operation. Scale of 1/10. I would rate 9.5. $225

. Swan 350 Transceiver with Power supply 80-10 meters. Looks good works well. $250.

. Swan 270B Transceiver has internal Power supply 80-10 meters. Looks good works well. $250

• Motorola VHF Remote All tube Model: PA8270J SER.NO: 8697. There is also a tone Signal and intercom control on front below speaker. This is the type that was used by police and fire dispatchers in the past. Don't know if it works. $50

• Heathkit HW 101, 80-10 meter transceiver. No Power supply. It is receiving, but don't not transmit. Not able to test. Looks are 7/10. As is $80.

• Hallicrafters Model S-108 SW Receiver with a calb. Ham band spread. Looks good works well.$75

• MFJ Rtty/CW Computer Interface Model MFJ-1224, used for copying code from the radio to your computer. $50

• Pearce Simpson, Guardian 23- All tube CB Transceiver/with mobil power cord and mounting bracket. Looks and works Good. $100

• Traynor, Group Two B- Audio Amp Head. High/ Low mic. in puts. Master volume, volume, bass, treble and tone shaper controls. $125

• Channel Master- Tube Stereo Receiver (Model 6612) and matching amp (Model 6601) Looks good and plays on FM. AM not working. $125

. AR Inc.- Stereo Amp, all solid state. $100

From: w5vhp@aol.com
Message-ID: <19980328130022O1.IAA23342@ladder03.news.aol.com>
Source record: 107723

I have 3 Collins meters. They are 2 7/8 " square. Don't know the manufacturer.
They have probably been removed form a broadcast transmitter.

1 - 0-500 V.D.C. (modulation)

2 - 0-25 Ma. (grid current)

3 - 0-200 Ma. (excitation plate)

All say "Collins Radio Co., Cedar Rapids, Iowa U.S.A." at top of meter face.

They are identical in size and are in good shape.

$17.00 each shipped.

73,
Larry, W5VHP

# 4719. Ham Radio Magazines for Sale

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-03-28 00:00:00 UTC
From: bgmill@aol.com
Message-ID: <1998032813172301.IAA22060@ladder01.news.aol.com>
Source record: 107724

I have for sale 203 issues of Ham Radio Magazines covering the years 1969 to 1983. The following is a list of complete years: 1970, 1973, 1974, 1975, 1977,1978,1981, 1982. I have also individual issues from 1969 to 1983 including many duplicates in the years that I also show as complete. The covers are all intact and the general condition is very good on all issues. I'll give preference to complete years taken as a lot. Individual issues are $2 each, complete years are $18 each. I am also interested in trades: Looking for SB610 monitor scope, SB612 panadapter, SB614 station console. Also need Collins 516F2 power supply, 312B-4 console, Drake MS4 speaker, R4C receiver, or what have you...would consider broken R388, R390A or sideband adapters for same like the Hammurlund HC10 or the military versions like CV157 (I think that's correct) and the like. The more you take the better deal I'll make on a cash offer and if you're in the South Jersey area we can work out pick up/delivery.

I also have 70 issues of CQ from 1945 to 1959, but no complete years. Make me an offer.
Thanks
Steve Kd2Ed

The only way to decide whether a tube need to be replaced is to check it
in the actual circuit where it is used. Many tubes may perform good on a
tube-tester, but will not perform well in an equipment.

# 4721. 12AU7 as product detector?

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-03-28 00:00:00 UTC
From: la8ak@krsand.no
Message-ID: <351cfc86.5778827@news.sol.no>
Source record: 107726
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.amateur.homebrew

For my Siemens E566 receiver I wish to improve the product detector, it uses 1/2 12AU7/ECC82. I think the easiest circuit is to follow W5DA (73 june 79, page 33) What is grid exitation level? (5Vpp BFO with 0.5V IF level to the grid). Cathode resistor is 4.7k, with 10uF elko, anode load is 4k7, Anode current 0.62mA. Perhaps the cathode resistor is far too high, 2200 ohm is a suggested value.

the problem with you guys - invading amateur radio newsgroups, is that you are not radio collectors, nor radio amateurs. You seem to invest into buying old equipment. Your only interests seems to be MONEY MONEY MONEY, buy and sell

in contrast to collectors, we exchange equipment, and in some cases we have to buy, but often some nuissance persons want to buy our equipment. One of my German receivers may have an actual value of $20.000, possibly much more, but I see not reason for selling it, it is no reason for another person to have it! The best Collins equipment is some useless toys compared to German WW2 equipment. The reason for collecting radio equipment is that one feel som interest for this type of equipment

It is very important that the collectors understand that they must be aware of these investors, because they might sell some equipment in the interest of the rig going to a good home, but too soon the price may be very much higher, later - when the investor find someone to sell it to

Hi,
I have had a lot of Amateurs replying to
me wanting the Collins Catalog's that I had.
Which are sold.
What I will do is I have had copy made of
these Books to keep for myself and if anyone
wants copys I would take my copys down to the
copy shop and have copys made for you. They put
them into binders and they look good. Almost
as good as original (almost). They charge me
$13.00 a book and if you want any of them let
me know and I will get them coped and send
them to you. $13.00 plus shipping, "each". The
shipping runs $2.00 each or all 5 for $5.00
If you want any make sure to let me know which
ones you want.

These are the copys that I have.

1. Collins Amateur Radio Equipment catalog.
Feb. 1961, 13 pages.

2. Collins Amateur Radio Equipment Catalog.
June 1963, 29 pages.

3. Collins Amateur Radio Equipment Catalog.
Nov. 1964, 23 pages.

4. Collins Amateur Radio Equipment pricing
schedule. Aug. 1966, 13 pages.

5. Collins Mechanical Filters, general
catalog. march 1964, 21 pages

Cross-posted to: rec.radio.shortwave,rec.radio.amateur.boatanchors

Hi,

I recently picked up a Lafayette HE-30 shortwave reciever at a garage sale (my first boatanchor!) and have been playing with it since. I had to replace a filter cap to get it to work but other than that I think it's in great shape. However, I have no idea how to use the darn thing! I can get normal broadcast stations fine, but what is the Q-multiplier supposed to do, and how do you use it?

Any info would be appreciated.

Thanks,
Fred Jaggi

I have for sale a DX-100 and HQ-170. These items were purchased and I have not had time to get to them, so I hope someone can use them.

DX-100 - Good shape, original cabinet repainted, but no extra holes. It looks like there are two non original knobs and one no original togle switch, no extra holes in the panel. Electrically untested
$125 - prefer chicago area deal as 100# +
HQ-170
It plays.... A couple on non original knobs, no extra holes in cabinet or panel. no clock. The chassis has a little bite so would need some minor TLC.
$160 - plus shipping from 60067.
Thanks
Mark

Some time back I came across a "modified" vibroplex. A previous owner had removed all the hardware, flipped the base over, and re-installed the hardware in a reversed configuration. My best guess was that the modifier was a Left-handed Op, or at least it seemed to work pretty good with the left hand.

Shortly after that I had an opportunity to ask a Neurosurgeon about the theory behind the mod. (I was paying him $$$$ to look at the nerves and muscles in my forearm, so figured what the heck!) I drew a rough sketch of a "bug" and explained and demonstrated the thought behing the manual DAHs and the semi-auto DITs. Although he had no knowledge of CW, Vibroplex, McElroy, etc., he said it made a lot of sense. With the opposite grasp of the finger and thumb, the hand could work very comfortably in that mode/position. Further, the muscles and sensitivity in the fore finger (and middle finger) would be better for "tapping" the DAHs than the thumb. The thumb muscles and nerves are not normally as agile as the fore finger, but would be well suited for "laying against" the "ditter" paddle. Neither he nor I were left handed, but he said the same physiological stuff applied to the left thumb and forefinger. Thus a left-handed operator would be able to adapt more quickly to a mechanism that favored the left thumb and forefinger.

That does not say that a L/H Opr can't use a standard bug. I'm sure many do and do very well. In some of the key collector literature there are photos of various left handed keying techniques. One included having the paddle/knob facing away from the operator and reaching over the top of the key, so the thumb was DIT and the fingers DAH.

[ For my next lecture, I'll address Left-Handed FBI Agents and the PROs and CONs of adapting to a Right-Handed automatic weapon and/or using a Left-Handed weapon. ]

Fred,
The Q-Multiplier is used to improve Selectivity (seperation between stations) in the receiver. The Q of a circuit is it's ability to pick up one frequency while rejecting the adjacent ones. Newer receivers use filters (wide, narrow, etc.) for this purpose. Find 2 stations next to eachother and play with it to see how it effects interference.

Dale

I am a Communications Repair Specialist for the U.S. Army, I can handle the trouble shooting and repair, I just need some guidance on this rig. Here is the deal:

With 12v applied to radio, red LED lights, and transmitter (with T/R switch) keys with correct paddle input....

There is NO speaker output, neither on recieve or transmit. There is NO deflection of S-meeter on recieve, regardless of AF or RF gain controls.... though the meeter DOES deflect (fully) on transmit or transmit tuning.

Does anyone have some suggestions? I checked the T/R relay, but I am not sure where power is applied an put through.... egad...

I need a manual, or even perhaps even a schematic.. Can anyone help? Where do I start on this one? :-|

Thankyou,

Chris

From: dave@boatanchors.com
Message-ID: <6fn8rd$icm$1@nnrp1.dejanews.com>
Source record: 107606
Cross-posted to: rec.radio.swap,rec.radio.amateur.boatanchors

For trade (or sell for $40 plus shipping):

Hallicrafters S-120 shortwave receiver. Plays on all
bands. Could use a tuneup. Very nice physical shape.
No scratches, dents, missing parts, mods, or damage.

See it at http://www.boatanchors.com and follow the
links to the 'Trading Post' page.

Trade for:

Old electronic parts: tubes, RF coils, old homebrew junkers,
variable caps, verniers, etc. - assortment.

OR TNC for basic packet (like a PK-88 or similar).

I pay my shipping - you pay yours. Same weight and value -
$40 or so plus shipping - the S-120 weighs just under 15 pounds
boxed. REMEMBER! It costs about $16 to ship 14 pounds from
one coast to the other via USPS!!

email your trade ideas to: dave@boatanchors.com

Thanks to all,

Dave WB7AWK

Hello all! I just aquired a Collins 32V2 transmitter at a flea market. Upon inspection all tubes light up (no smoke), but I need to replace power cord before going any further with it. I was wondering if anyone could help with some info on this set. I will be needing to find schematics/ manuals, etc. If anyone knows what this rig might be worth I would appreciate it greatly.

Thanks,
Mark M. Smith
mmsmith@mindspring.com

# 4754. R388/A-51J3/4 Parts Wanted

# 4759. Alligning AA5 AM radios without signal generators, a method, good?

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-03-29 00:00:00 UTC
From: wa2ise@netcom.com
Message-ID: <wa2iseEqKC1L.LBC@netcom.com>
Source record: 107665
Cross-posted to: rec.antiques.radio+phono,rec.radio.amateur.boatanchors
Body handling: HTML body converted to readable text

Just wrote the below web page (which is found at
http://www.geocities.com/CapeCanaveral/9178/radios/allign.html)
and reproduced below for your reading pleasure :-)
Want to ask "how good a method is this?"
Remember, it's just for 5 tube AM radios, not R390's :-)

Alligning AA5 radios

Alligning AA5 radios

For reference, a standard AA5 radio circuit:

(T2 is first IF transformer, T3 second IF transformer)

If you do not have a signal generator, it is possible to use the
local and distant AM radio stations of your town as signal generators.

Many AA5 radios have non-adjustable inductances for the local oscillator
coil (T1 in the above diagram) or the antenna (L in the above diagram).
It appears that making such coils accurate wasn't that hard to do
in production, and it was cheaper than making them adjustable. The
tuning cap almost always has trimmer adjustment caps, these have
maximum effect on the high end of the AM radio band. Almost no effect
on the low end of the band.

As the inductances and capacitances of the antenna and local oscillator
tank circuits are essentially fixed, a way to get maximum sensitivity
out of the radio is to set the frequency of the
IF transformers to the difference of
the peak resonsances of the antenna and local oscillator tank circuits.
Tune in a relatively weak station around 600KHz, and try tweaking the
IF transformer trimmers or slugs. ***You MUST
use the exact fitting tool, or else
you WILL break the slug and it will get stuck.
These slugs are FRAGILE***.
You should be able to "walk" the tuning dial up or down slightly to
see which way gets more signal. You should hit a maximum.
You shouldn't have to go very far, no more than 20KHz or so. Finish the
IF by tweaking the secondary of T3, the primary of T3, secondary of T2,
and the primary of T2 (see diagram). Then retweak
in the reverse order. Hopefully,
the station will be located at about the right spot on the calibrations
of the dial. Reposition the pointer if you can (slide rule dials).
Or just remember the

amount of offset to apply to the dial and reposition the pointer later.

Now for the high end of the band. Tune in a weak station at the top of the dial, and check to see if the station is located at the right spot on the calibrations of the dial (with the above offset if needed). Tweak the local osc trimmer cap
to walk the station to the right spot. Tweak the antenna trimmer for max signal. Then tune in a weak station around 1400KHz and retweak the antenna trimmer for max sensitivity. This should finish the job.

Practice on a radio you don't much care about first.

> Want to ask "how good a method is this?"

All in all it looks pretty good... - I _can_ think of a few suggestions: (I think you asked ;>) )

1) Assuming a typical AA5 - it's often hard to really "peak" while listening to program material - the modulation is often all over the place - and that's what you hear. Most AA5s feed AGC to the converter - usually through the loop antenna - and via the fixed plates of the Tuning cap. - and again usually the larger of the two sections. Would it be useful to use a VTVM (or equivalent) to track the AGC - to find those "peaks"? and if so - a note to keep the AGC reading as low as posible (weaker station, move antenna, etc.).
2) since it's posible that the person doing this isn't very experienced - and I do note that you sorta cover this (your statement about not moving the dial more than 20Khz or so) - it might be prudent to specifically cover IF image - and how to determine which is real and which is image. It's second nature to those who have aligned sets for ever - not so obvious to newbies.
3) a 455khz osc. can be built with four parts (ok - 5 if you count the 9V battery snap connector) perhaps a construction project of such would be in order - most people could build one - and it should be stable enough for most any thing short of a 390. ;>) This same circuit can double as a BFO for radios without one - though the BFO version works better with a variable resistor in the base bias circuit - with the "can" tuned just above or below 455 - the variable can then swing the frequency "through" 455... though that would sacrifice the "accuracy" of the fixed tuned version.

best regards
--
randy

Source record: 107678

Hello,

I have for sale 2 excellent Collins rigs that look and work grea and have been in use for the last year.

1. Collins 32V-2 Transmitter (AM/CW). This rig is in CCA VG to Excellent and is 9 to 9.5 on a 10 point scale. It has the original paint, which is in excellent condition and it works great. It comes with an extra 4D32 final tube and a copy of the manual.

It is pick-up only in No. NJ and I am asking $480 for it.

2. Collins 75A-2 Receiver. This rig is in CCA VG condition. It works and looks great and is 9 on a 10 point scale. It was refurbed by Howard Mills (W3HM). The cabinet has been repainted and looks great. It has a product detector which was added by Howard (plugs into tube socket...to return to original, unplug and put back the original tube) It comes with a copy of the manual.

It is pick-up only in No. NJ and I am asking $450 for it.

I will sell both rigs together for $900 and will throw in the TR switch/interface for the 2 rigs (not Collins).

If interested, please call during the week(days) at (908)221-7736 or send email to: sereikas@worldnet.att.net.

Thanks and 73,

George

For Sale: Complete Drake B-Line

T-4XB, R-4B, AC-4 Power Supply, and MS-4 speaker.

In excellent condition. Both rx and tx cover 80/40/20/15/10 meters.
RX also has crystals for 160, 30, 18, 12, and 10CW, for transceive operation.

Tubes are not new but tx puts out full power on 80 to 15,
slightly less on 10. Will throw in a spare set of finals.
Recently (1996) replaced the high voltage capacitors in the AC-4 supply.

I am the second owner (since 1978) and the rig has only been lightly used.
No contesting. Cosmetically it is very clean (non-smoker) and includes
original manuals.

Best offer over $395.

# 4779. Work the Sats! F/S L.L. Grace DSP-12 "Sateellite" TNC

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-03-29 00:00:00 UTC
From: Dale Yost <dyost@marketing-support.com>
Message-ID: <351E75D5.19A8@marketing-support.com>
Source record: 107685

Hi,

FOR SALE: The "ultimate" TNC. The L.L. Grace DSP-12. Hook this up to your rig (even a handie-talkie!) and your IBM-compatiblecomputer and you can easily connect to your favorite local land-based packet radio stations. But this TNC can also let you do a whole lot more--including experiencing the thrill of communicating with any of the many amateur radio satellites, certain (ham operator on-board) Space Shuttle Missions, even Russia's MIR space station!

The DSP-12 replaces the traditional analog modems of cheap TNCs with a Digital Signal Processor (DSP) CPU! It's fully programmable. Handles the specialized packet protocols of WEFAX, RTTY, ACARS, plus the OSCAR (Orbiting Satellites Carrying Amateur Radio) satellites. Works with HF Packet, RTTY, and ASCII; VHF/UHF packet; plus the capabilities you need to work the satellites: 400-bps PSK, 1200-bps PSK, 9600-bps direct FSK--plus six PSK speeds from 75-1200-bps. And since it has a computer CPU, it can be programmed with software upgrades to handle new technologies/protocols as they're introduced.

This immaculate unit cost me over $700 new. Comes with a very thorough manual--plus Satellite Tracking software (Looks better than NASA's on-screen), plus cable to connect to your computer's serial port, and TNC software. For best offer over $350, I'll include a power supply unit and books on satellite communications to get you going.

Now, *that's* impressive, Scott!

>The reason why "left handed" bugs are so rare is that you would have
>to be a total retard to not be able to learn to send making dashes to
>one side and dots to the other- left or right.

I highly doubt Scott's friend is a "total retard" - after all, as
Scott reports above, the fellow has built his own bug. Have you
done that? If so, give us your web address so we can view it.

Now Mr. Concentric.net, I challenge you to get on the air and use a
bug with your "other" hand; tell use the freq'y and time so we
can listen how easy it is for you to use your off hand.

>Left and versus right hand with semiautomatic (or fully automatic)
>telegraph keys simply doesn't make sense !

I've been forcing myself to use my right hand while writing on the
chalkboard during lectures. It's taken me years to get up to speed.
Luckily, my students have been very patient!

73 from a lefty,
Jeff KH2PZ

# 4783. Cushman CE4000 Test set

Newsgroup: rec.radio.amateur.boatanchors

From: John Clarke <jmclarke@thezone.net>
Message-ID: <351E893E.658D1740@thezone.net>
Source record: 107689

I recently obtained a CE4000 test set that is inoperative. The problem appears to be with the switching power supply---It doesnt start at all. There was a user manual with it but very little schematic information. Can anyone help with a source for a manual or even a schematic and parts list for the power supply section?

Thanks.
John VO1EE

Hi, all!!
If you have any AN/ARC-5, SCR-274-N stuff laying around the shack...I want to buy it! Xmtr's, rcvr's, control boxes, cables, wiring, dynamotors, racks...anything! If you have any old dead ARC-5 chassis laying around, I'll take those, too!
Just e-mail me (reply or address below) with what you have and I'll make you an offer. Naturally, I'll pay shipping. Clean out that shack and make some money.

Body handling: HTML body converted to readable text

A couple of comments.. we have a local station here at 910kHz and used to use that as a frequency standard as it is twice the if frequency. That presumes use of a test generator, however. Also, this procedure begs the question, does the IF circuitry need realignment to begin with? Usually all that is wrong with an AC/DC (or any tube receiver for that matter) is failed capacitors and resistors. Occasionally a capacitor will break down in an IF can and cause a static noise. But except for replacing an IF can, is there really a need to realign the IF stage? The coils in IF cans are fairly stable and once set should be quite acceptable. A very weak signal would be needed to properly peak the stage, it should be below the AGC threshold, or, preferably, the AGC should be disabled during alignment. Understanding of that might be beyond the experience of a novice who would typically not yet have a signal generator. Such generators are available at swap meets around here for $5.00 or so, sometimes free. This seems like a "quick and dirty" way to get a rough alignment, but likely the IF stage is already better aligned as it comes from the factory than could be routinely accomplished using this approach.

Further, on pre-war radios, such as Packard-Bell sets where IF coils are exposed, alignment is very tricky even with proper test equipment. The sets tend to oscillate unless everything is aligned correctly to begin with. The approach would not work in this case.

Go to a hardware store and buy a wax toilet bowl seal for a couple of
bucks. I guarentee it will last you a lifetime of waxing coil slugs.
Also useful for starting screws, put a wad on the end of your
screwdriver, and the screw will stick to it. I keep a 35mm film can
full of it in my tool box.

Source record: 107612

I was invited to a friends house tonight to look at a radio owned by her deceased husband. It is a Zenith TransOceanic shortwave receiver model B600. The chassis number was a CH-6A40. It was in excellent condition and works fine. I think it needs an alignment though on the higher shortwave bands. It has the original Zenith headphones and all of the paperwork including schematics and a Zenith marketing brochure. The shortwave listeners guide build into the top was there and in excellent shape. With a little loving care I think it would clean up to a 9+ radio. I want to make sure she gets what it is worth. How much should I pay? What is a fair price for one in excellent condition.

Thanks for your help

Jerry K8RA

# 4801. Looking For Zeus!!!!!!! Clegg that is.....

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-03-30 00:00:00 UTC
From: radiorob@serix.com
Message-ID: <351f21c6.6375474@nntp2.uunet.ca>
Source record: 107615

Hello Folks:

What a day!! Started out this morning at 9AM to take my Son BirdWatching
at Longpoint Provincial Park on Lake Erie. After about 3 Hours of driving
and a couple of hours looking for Birds....we finally arrived home. On my
answering machine was a message from Gary Cheek KG8LB telling me that he
had found something I would be very interested in!! Gary had unearthed a
Clegg Zeus 2/6 Mtr. Transmitter and matching Clegg Interceptor 2/6 Mtr
Receiver in Nice shape...and he wanted to know if I wanted these
things.....if not he was going to put it on the net!!! Well....about 5
minutes later...I was back on the road again, and headed for Utica, Mich.
Another 4 hour Roadtrip, but man...what a reward!! I couldn't get there
fast enough!!

Upon arrival I was treated to a matching set of Clegg VHF Twins, complete
with the 80 pound Power/Modulator supply and all original
manuals.....although I don't think the Transmitter manual is complete...so
I may need some help if anyone has a Complete Zeus Manual. The overall
condition of the set is about a 7-8 out of 10......after clean-up should be
even better. The front Panels are real Clean...and in Excellent physical
shape. Gary had not had a chance to fire them up...so they are
untested....but I'll worry about that later. If I get these babies
working....it puts out a whopping 100 Watts plus on AM. That's well over 10
times what my Clegg 22'er does on AM.

I'm way too tired to do much with it tonight.....so it will have to wait
til I find some time to play around with it...and see what it's doing
electrically. I'll probably clean them up good first anyway.

In the meantime...if anyone else on the list has one of these
Monsters...I'd be real happy to hear from you. Any comments you may have on

their operation, performance, tips etc. would be appreciated. I have been
collecting Boatanchors for over 20 years...and this is "The ONLY" set of
Clegg Twins I have ever seen....period...so I would tend to think they are
rather hard to find??? With an Original Price of over $1,000.00 in 1962...I
wouldn't think there was a lot of them sold?? That would be a pretty hefty
price for a VHF setup...especially back then.

If you know anything about these guys...please let me hear from you. I'll
get back to the list as soon as I have had time to snoop around inside of
them.

Thanks....Regards/73.....ROB.

Source record: 107617

Just had a good laugh at the posting that claimed WWII Kraut radios are better than Collins.

LA8AK@online.no said:

>The best Collins equipment is some useless
>toys compared to German WW2 equipment. The reason for collecting
>radio equipment is that one feel som interest for this type of
>equipment

I understand that they looked impressive (WWII German radios, that is), and were built well. My father (who spent 3 years in Italy & Germany, 1943 - 1946) said the only thing he liked better than shooting Germans was busting up their equipment. He did say that the radios were very hard to kill - much more so than Germans. So... I guess you do have a point.

I have an RME 4300 ham band receiver for sale. Cosmetics are good. I'd rate it a 7.5 out of 10 and it should clean up to be even nicer. The main tuning knob does not look original, but the knob used looks reasonably close. Manual included. Asking $110.00, shipped to lower 48. Please e-mail if interested. Thanks.

I have a Hammarlund HQ-170A ham band receiver for sale. Unit is in very nice physical condition (a 9 out of 10). Does not have a clock. The main tuning knob and 2 small selector knobs are not original but they do not look too bad as far as matching the rest of the knobs. Unit works well and has a manual. Cabinet is in very nice shape. Same goes for the front panel. Chassis is clean. Asking $165.00 pick up only or can deliver or meet within 100 miles of me (near Allentown, PA). Please e-mail if interested. Thanks.

I am sure the yanks never had difficulties finding targets, and the more
you destroy, it increases the chance we have to buy your rubbish!

I mentioned the 51-S before, it was used at coast stations for SSB, but
AGC is not good, good receiption is only possible when you turn the RF
gain down. The German receiver KwEa (built in 1939) has different time
constants for cw and am. Even BC348 has different time constants for ssb
and cw.
At Troms&#65533; meteorolical station they got Colllins equipment to replace
the German equipment in 1960. This proved very good as long as condx was
good, but unfortunately since magnetic storms is often a problem, they
had to reinstall the German receivers, because - as they claimed - you
will never find anything equal to copy weak signals when condx is bad!

Fred

Well let me see if I can explane this in less than 5000 words.

A Q-multiplier is normaly used to increase the Q therefore the selective
of a tuned circuit. This is normaly done at the IF stage (on one of the
IF transformers). They can be a great aid in using your receiver but
like most things there is a learning curve involved. Some of the 50s or
60s handbooks may have some litature on them. If you have anymore
questions let me know

Howdy Fred....I concur with Dennis on the learning curve to use your Q-Multiplier (and the 5000 words or less description heheh).
A Q-Multiplier is a regenerative stage added to a receiver usually (not always) in the I.F. This stage is adjustable as to the amount of regeneration (Selectivity Control) and the point in the IF passband where it takes place (Frequency Control). If you DO NOT have a BFO on the receiver then the Q-Multiplier is used for two purposes - 1. Below the point of actual regeneration it is used as a variable selectivity feature using the Selectivity control (Widest is usually just turned on - Narrowest is just prior to regeneration=squeal!)...this can typically vary the passband from perhaps 3kHz to as narrow as 100 Hz! The Frequency control "skews" this response over the width of the IF passband thus acting as a poormans IF SHIFT / WIDTH control....You can use the Freq control therefore to ENHANCE a signal and / or REJECT an interfering one. The SECOND function of a Q-Multiplier (only if you DON'T have a BFO) is to bring it into regeneration such that now your formerly AM only receiver will receive CW and, with practice, SSB signals).

Prob better explanations...that's my stab at it :)

Gord

## 4828. 1.5 to 12 MC qualifications

CRH>I need a manual, or even perhaps even a schematic.. Can anyone help?
CRH>Where do I start on this one? :-|

CRH>Thankyou,

CRH>Chris

I own a HW=7 and know that all info regarding it's p[eratopm dpes mpt extemd tp tje HW-8. On the HW-7 there is no S-meter function. The receiver is not a superhet; but is a so-called DC ( direct conversion ) or Audio-dyne rx.

The meter on the unit measures current to the TX finals. If the TX is keying and not only drawing current but producing rf out then the variable osc used by the rx function as well ass tx is functioning and any problem must be in either sidetone circuity or the DC rx functions. Hopefuly some owner of an HW-8 will also see your post and can furnish a copy of his schematic but your description of the problem implied to me that perhaps you might be chasing a none problem..ie there is no S=meter. Oh BTW on my HW-7, the rx is very sensative when I have the right ( critical settings of the tx matching ciruit ( ant coupling / matching ) and a signal on the rx frequency. If you have not

tested the RX with a known good singal generator or on the air substituting with a known working rx, please try to get confirmation that the rx works.

I do not believe your sidetone function is working correctly as I do get sidetone with mine when keyed,

Good luck, I sug4esst you consider sending a msg to listsvr@lehigh.edu and use the subject of Info for the message. Body may be blank I believe and you should get an autoresponder msg about the QRP list-server maintained at that site. Thee are many qrp addicts using the HW-8 and your odds of getting a response from soemone who is more knowledgable will be enhanced in that group.
73, Dale Croft

# 4831. Re: 1.5 to 12 MC qualifications

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-03-31 00:00:00 UTC
From: n2ey@aol.com
Message-ID: <1998033114554301.JAA15893@ladder03.news.aol.com>
Source record: 107557

Hello Garrett:

To operate in those bands, you need a General, Advanced or Extra Class license. Here are the basic requirements:

General: Multiple choice written test on theory and regulations. 13 words per minute code receiving test.

Advanced: Same as General but written test includes all of General plus more complex questions. 13 WPM code receiving test.

Extra: Multiple choice written test on theory and regulations that includes General and Advanced questions plus even more complex questions. 20 WPM code receiving test.

Frequency allocations:

General Class:
160 meters: 1.8 - 2.0 MC, voice and code
80 meters: 3.525 - 3.75 MC code, 3.85 - 4 MC voice and code
40 meters: 7.025 - 7.150 MC code, 7.225 - 7.3 MC voice and code
30 meters: 10.1 - 10.15 MC code

Advanced Class:
160 meters: 1.8 - 2.0 MC, voice and code
80 meters: 3.525 - 3.75 MC code, 3.775 - 4 MC voice and code
40 meters: 7.025 - 7.15 MC code, 7.15 - 7.3 MC voice and code
30 meters: 10.1 - 10.15 MC code

Advanced Class:
160 meters: 1.8 - 2.0 MC, voice and code
80 meters: 3.525 - 3.75 MC code, 3.775 - 4 MC voice and code
40 meters: 7.025 - 7.15 MC code, 7.15 - 7.3 MC voice and code
30 meters: 10.1 - 10.15 MC code

Extra Class:
160 meters: 1.8 - 2.0 MC, voice and code
80 meters: 3.5 - 3.75 MC code, 3.75 - 4 MC voice and code
40 meters: 7.0 - 7.15 MC code, 7.15 - 7.3 MC voice and code
30 meters: 10.1 - 10.15 MC code

Most AM activity centers around 3.850 and 3.885 MC.

For more info, email me and also look at the ARRL website:

http://www.arrl.org

Good luck!

Source record: 107560

Dear Sir

Let me inform you that the World's most popular Aircraft Tracking
Software New Version will be released in 9 of April.
You can already see 10 detailed Screen Shots of the program at its
homepage:

http://fly.to/airnav

There you will find complete information about the program.

AirNav 2.00 is almost a New program, not a New Version.
Version 2.00 main features include:

o Multi-Window Tracking
o Vertical Tracking
o All Heard Database
o Up to 1000 flights simultaneously
o Up to 50 waypoint/flight
o Accurate estimation of times and waypoints
o New User Interface
o 32000 waypoint database
o 7 different map creation methods
o Airspace related data drawing
o New Database Interface
o Terminal and Flight Management Modes

Hope this info is of your interest, Andre Brandao

There should be a jumper from the keyer out socket to the key socket on
the back panel....they're next to each other.
Cheers.

Hello,

Thanks for reading this!

I want to buy marine VHF transceivers made by R.L. Drake Company. The
models I'm looking for are:
MRT-55
MRT-55C
TR-V
TR-22M

I'm interested in these units in any condition, working or not. If you have
any ideas of where I may find any of them, such info will be most welcome
too.

Please e-mail to: sindtorp@online.no

Thanks,

Sindre Torp, LA6OP

Hi,
I picked up a Unitrode-00 at the Timonium as it looked interesting.
Its a box about 10"high 8x8 square. It has an outlet for a line cord
and some writing near it mentioning 6Volts and B+. The top has a
cutout for the top of a ?? light bulb/tube/unitrode. The tube is in there
and is frosted with a wire running up to its top (plate cap?). It seems
to be a fixture for housing a lightbulb. Anyone out there know what
this Unitrode-00 is? Made in Newark, NJ.

Ed the SBEs were neat little radios. I have six of them myself(no I
can't explain why, I just do) 3 SBE33s and 3 SBE34s.
I didn't pay more than $50 for either of them. Don't let this
discourage you about the rig though, they work as well as any of the
early sixties trancievers.(at least the affordable ones) And they
don't take up much room, small with built in power supply and speaker.
I think it's about the most affordable way to get on HF with a
respectable signal I don't know why they don't bring higher prices but
it makes it easier for those who like to play with them.

Never heard of the brand but I'd bet it's a late 20's battery
eliminator.Sounds like a Recticon type rectifier [cold cathode w/top
wire connection]. This is a true boatanchor//tie a rope to it.

I posted here last week about some computer printer ribobns I had, that I wanted to sell off. I posted them here, because they are for some of the "boat anchors" type printers being swapped at ham fests.

Whats more, if you or your club has one and does a lot of printing, these may save you a bunch for at least a short while.

Here is what I have along with the quantity. YOU cross type for your machine.

Numbers/Information found on box (qty)

NEC Black Multistrike 5500/7700 Spinwriter 16
Kores Matrix Nylon - C.Itoh 8500 60
NEC 3500 Black Nylon 90
NEC Black Nylon 8023-A-01 12

These are NEW in the factory sealed wrapping, but being sold as is due to age, no returns. $1.00 each plus shipping. Quantity deals available.

Lou

Good radio to aquire - some coils alone worth $50.00 each US. Usually
can be had for $150 - $250.00 depending on condition. Ask for the
speaker to, and ask for any of the dial crystals that may have found
there way elsewhere. If its a junker, you can salvage $150.00 out of it
just for parts. Broadcast coils are very desireable for this radio if he
has them. Make your own deal for what you think he would take.

# 4860. wanted kenwood t599d transmitter

# 4862. Email reflector for collectors of OLD tube type Ham Gear

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-03-31 00:00:00 UTC
From: Eugene Rippen <soundval@foothill.net>
Message-ID: <3521A0D7.2796@foothill.net>
Source record: 107588

For those interested in older ham gear, tube type items and accessories,
including homebrewers, there is an Email Reflector called baswaplist.
It is FREE. It has over 600 subscribers

IT IS FOR buying, selling and swapping of :
Tube Type and Older ham equipment, parts, accessories, and
manuals and catalogs.
Books and periodicals concerning tube type equipment and older
ham gear.
Single one time announcements of swap meets. Though, NOT
including who will attend or what specific items will be
offered.

IT IS NOT FOR:
Discussions.
Commercial advertising other than for the sale of specific
items of the nature described above, and with prices
and quantities. In other words, no institutional type
advertising.

LIMITED (but not totally banned) ARE:
Repetitive ads.
Auctions. An auction is considered to be any ad of items for sale
that expressly or impliedly requests offers.
A reasonable amount of ads relating to Tube Type Domestic
Broadcast Receivers and Parts are permitted.

Persons, whose mail repeatedly bounce, are removed from
the list. They can, of course, subscribe again.

TO SUBSCRIBE: SEND Message to: majordomo@foothill.net
In MESSAGE body SAY ONLY: subscribe baswaplist.
Then the email address of the sender will be added to the list.
To unsubscribe do the same, only say "unsubscribe" instead of "subscribe"

This list is CASE SENSITIVE as to the addresses of subscribers, that
is regardless of whether your ISP at your end is case sensitive. Mail
that comes from a sender whose address does not PERFECTLY match
the address on the list of subscribers is bounced. This is installed as
some prevention to the list being used for spamming.

Messages sent directly to me requesting subscribe or unsubscribe may
be ignored, or at best sent some kind of prepared boiler-plate
notice.

I run the list. I am Eugene Rippen. Flack may be directed to me
at soundval@foothill.net

Date: 1998-03-31 00:00:00 UTC
From: "Lane C. Zeitler" <km3g@cts.com>
Message-ID: <891271849.630495@wagasa.cts.com>
Source record: 107641
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.swap

WILL NOT SELL SLUGS SEPERATELY.

Model 4527 19" rack style dual meter unit. Has FWD and RFL power meters side by side mounted in a 19" rack type plate that is about 4 inches high. Unit also has RF sample jack on front panel. FWD and RFL power meters have their own individual slug ports (which I found very handy).

This meter unit has been used as my main shack RF power monitor. Included are the following slugs:

2500H: 2 - 30 mhz 2500 watt
500H: 2 - 30 mhz 500 watt
250H: 2- 30 mhz 250 watt

I used the 2500 watt element in the FWD position and either the 250 or a 100 watt (not inlcuded) element in the RFL position and it worked out very well.

Price is $275.00 plus UPS charges from San Diego zip 92139.

WILL NOT SELL SLUGS SEPERATELY.

Lane
KM3G

Source record: 107647

Clean SB100. Power supply, desk mike (chrome, excellent audio) Transceiver, all manuals, extra finals. Including shipping from Pittsburgh, $240.00 I don't want to break up the station, this is a nice package for the Novice or New Tech. A terrific package to take to your summer home!! All reasonable offers considered. Would possibly entertain a swap for a clean Hammarlund, National, or similar receiver or vhf/uhf stuff.

Source record: 107650

Jerry,
<You wrote: I was invited to a friends house tonight to look at a
radio owned
<by her deceased husband. It is a Zenith TransOceanic shortwave
receiver
<model B600. What is a fair price for one in excellent
<condition?

Look on "ebay auction classifieds" & search for that model. It would
probably
go for $100 to $200. Hard to say but its possible it could go
higher. It might
go a little higher if you have EVERYTHING that came with
it when it was
new. Does it have original tubes? Lots of details seem make
it worth more.

I have purchased 3 tube type & 1 transistor T-O so far in
the last few months
and have paid $150 for the very good condition & $86 to
$100 for fair
condition. I think I got good deals on the "good/vg"
condition radios based
on ebay prices. I am new to collecting old radios &
mostly have Zenith's &
T-O's

I don't believe the price is very important if
you really like the radio & will use it.

Ron... WB6MQG

Matt:
Another source of information is the R-390 QTH net, a reflector.
Probably the easiest way to join is to go to:
http://pw2.netcom.com/~ac6v/pageae.html, and look for
QTH net information. If you have trouble, e-mail me. I just tried to
bring up this (AC6V) site to verify I'm correct, but things seen to
be super slow right now and I timed out. Another good, and very active
reflector is Boatanchors.

# 4883. Collins R-278 B/GR Info wanted

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-03-31 00:00:00 UTC
From: John Owen <johnowen@btinternet.com>
Message-ID: <01bd5c90$34449dc0$543863c3@default>
Source record: 107652

Help Information please
I have an R-278 B/GR, 225-400MHz Autotune, channelised receiver and would appreciate any information regarding age, areas of use (in aircraft?) etc, a brief rundown of the autotune system would be interesting also as it seems very complex with 44 tubes and motor operated selectors etc. I would also like an idea of it's value.
Thanks
John
